Chemistry, Emission Control, Radioactive Pollution and Indoor Air Quality Nicolas Mazzeo, 2011-07-27 The atmosphere may be our most precious resource Accordingly the balance between its use and protection is a high priority for our civilization While many of us would consider air pollution to be an issue that the modern world has resolved to a greater extent it still appears to have considerable influence on the global environment In many countries with ambitious economic growth targets the acceptable levels of air pollution have been transgressed Serious respiratory disease related problems have been identified with both indoor and outdoor pollution throughout the world The 25 chapters of this book deal with several air pollution issues grouped into the following sections a air pollution chemistry b air pollutant emission control c radioactive pollution and d indoor air quality

The Mediterranean Sea Alain Salot, 2005-08-24 This volume represents a practical survey of current understanding of chemical contamination of the Mediterranean Sea Beginning with an overview of the general physical and socio economic context the author reviews the exploration of processes governing the fate of chemicals assesses the budget of both inorganic and organic contaminants and describes new tools for studying the impact of pollution on the Mediterranean

Atmospheric Particles Joseph M. Conny, Peter R. Buseck, 2024-12-24 Studying atmospheric particles from a microscopic perspective Most of what is visible in the atmosphere such as pollution dust haze fog and clouds is due to micrometer and nanometer sized aerosol particles It is important to understand the source characteristics and behavior of these small particles as they play a fundamental role in large scale atmospheric processes Microanalysis of Atmospheric Particles Techniques and Applications presents different microscopic techniques for studying aerosols and explores a range of applications in climate studies and air quality studies Volume highlights include Overview of different techniques and applications In depth descriptions of scanning electron microscopy transmission electron microscopy electron energy loss spectroscopy Raman microspectroscopy and atomic force microscopy Techniques for studying physical characteristics and chemical composition Methods to examine particle transformation Examples including soot organic aerosols ice crystals and
