

AMMUNITION AND GUNNERY

Despite the present-day emphasis on missiles, guns continue to be important offensive weapons.

As a Seaman, you may be required to man gun stations or serve as a member of a magazine crew, so it is necessary that you have a general knowledge of the ammunition and guns in service.

It is not our intent, nor is it necessary, to discuss all the different types of ammunition and guns used in the Navy today. This chapter does, however, contain much information on guns, ammunition, and gunnery in general; information that should be very helpful to you in meeting your early shipboard assignments.

Excluding small arms, Naval guns are classified according to size. Within this classification, they are grouped as major, intermediate, or minor calibers. Major caliber guns range from 8 inches up to 16 inches. Intermediate calibers are greater than 3 inches and less than 8 inches. Minor caliber guns are 3 inches and below.

AMMUNITION

LEARNING OBJECTIVE: *Define ammunition. Differentiate between the types of ammunition used aboard naval ships. Define and explain the different types of projectiles and propelling charges used in the Navy. Explain the use of the magazine and magazine sprinkler system.*

In a general sense, ammunition includes anything that is intended to be thrown at the enemy or put in his path to deter, injure, or kill personnel, or to destroy or damage materials. The term ammunition is used in a much narrower and more technical sense in this book. Ammunition includes any projectile or explosive weapon, as well as components or parts thereof, but not guns or weapon launchers and their parts.

Service ammunition is ammunition fit for service use and including all explosive and propellant components. Inert ammunition (that is, lacking explosive and propellant components) and partially inert ammunition of several types are used for test, training, and practice purposes. Dummy or drill

ammunition (completely inert) resembling service ammunition in appearance, size, and weight, may include functioning components that contain no explosive or propellant. It is used for training and test purposes. Cutaway ammunition (completely inert) has a section cut away to show inner construction and components; it is used for training and display purposes. Plaster-loaded or sand-loaded ammunition lacks the explosive burster charge but is otherwise not inert; it is used for target practice and for testing of launchers, mounts, or projectors.

IDENTIFICATION

As a member of a gun-loading crew, you will be tasked with finding, identifying, and loading different types of ammunition. Each round fired must be identified and recorded in the ship's logs. Ammunition is identified by stenciled information printed on the round and by its color. Stenciled information consists mainly of the Navy Ammunition Logistics Code (NALC)/Department of Defense Identification Code (DODIC) and lot number.

A standard nomenclature and numbering system has been established by the Department of Defense (DOD). This system is a four-digit, alphabetic/numeric code which will be either a Department of Defense identification code (DODIC) assigned by Defense Logistics Services Center (DLSC) or a Navy ammunition logistics code (NALC) assigned by Ship's Parts Control Center (SPCC). Examples of DODIC/NALC nomenclature are as follows:

AMMUNITION TYPE	DODIC/NALC
57/54 Illumination Projectile	D328
67/50 BL&P Projectile	D873
12 GAUGE 00 BUCKSHOT	A011

COLOR CODES, MARKINGS, AND LETTERINGS

The system of identifying ammunition by the use of color codes, marking, and lettering is intended to be a
