The Emotional Mind Stephen T. Asma,Rami Gabriel,2019-04-15 Tracing the leading role of emotions in the evolution of the mind

a philosopher and a psychologist pair up to reveal how thought and culture owe less to our faculty for reason than to our capacity to feel Many accounts of the human mind concentrate on the brain s computational power Yet in evolutionary terms rational cognition emerged only the day before yesterday For nearly 200 million years before humans developed a capacity to reason the emotional centers of the brain were hard at work If we want to properly understand the evolution of the mind we must explore this more primal capability that we share with other animals the power to feel Emotions saturate every thought and perception with the weight of feelings The Emotional Mind reveals that many of the distinctive behaviors and social structures of our species are best discerned through the lens of emotions Even the roots of so much that makes us uniquely human art mythology religion can be traced to feelings of caring longing fear loneliness awe rage lust playfulness and more From prehistoric cave art to the songs of Hank Williams Stephen T Asma and Rami Gabriel explore how the evolution of the emotional mind stimulated our species cultural expression in all its rich variety Bringing together insights and data from philosophy biology anthropology neuroscience and psychology The Emotional Mind offers a new paradigm for understanding what it is that makes us so unique Emotions as Bio-cultural Processes Birgitt Röttger-Rössler,Hans Jürgen

Markowitsch,2009-06-12 Emotions have emerged as a topic of interest across the disciplines yet studies and findings on emotions tend to fall into two camps body versus brain nature versus nurture Emotions as Bio cultural Processes offers a unique collaboration across the biological social divide from psychology and neuroscience to cultural anthropology and sociology as 15 noted researchers develop a common language theoretical basis and methodology for examining this most sociocognitive aspect of our lives Starting with our evolutionary past and continuing into our modern world of social classes and norms these multidisciplinary perspectives reveal the complex interplay of biological social cultural and personal factors at work in emotions with particular emphasis on the nuances involved in pride and shame A sampling of the topics 1 The roles of the brain in emotional processing 2 Emotional development milestones in childhood 3 Social feeling rules and the experience of loss 4 Emotions as commodities The management of feelings and the self help industry 5 Honor and dishonor societal and gender manifestations of pride and shame 6 Emotion regulation and youth culture 7 Pride and shame in the classroom A volume of such wide and integrative scope as Emotions as Bio cultural Processes should attract a large cohort of readers on both sides of the debate among them emotion researchers social and developmental psychologists sociologists social anthropologists and others who analyze the links between humans that on the one hand differentiate us as individuals but on the other hand tie us to our socio cultural worlds **A Brilliant Mind** Frank Minirth M.D.,2007-01-01 Most people

use less than 5 percent of their overall brain potential A Brilliant Mind helps readers tap into the other 95 percent through the mental exercise of vocabulary building and memorization With the exercises in this book readers can improve test scores increase IQ memorize more information communicate more effectively and excel in work and interactions with other people Developed from Dr Minirth s vast experience as a psychiatrist A Brilliant Mind contains dozens of word lists to memorize a

process that will not only increase vocabulary but also change and grow the brain itself The book also reveals eight time proven memory techniques encourages Scripture memorization and offers insights into language that will open new doors for any reader A Brilliant Mind will be especially helpful to baby boomers looking for mental exercises to sharpen their minds and improve their memories

Have you ever heard of a Hype Cycle It is a description that was put forward by an IT consultancy firm to describe certain phenomena that happen within the life cycle of new technology products As Fenn and Raskino stated in their book Fenn and Raskino 2008 a novel technology a Technology Trigger gives rise to a steep increase in interest leading to the Peak of Inflated Expectations Following an accumulation of more detailed knowledge on the technology and its shortcomings the stakeholders may need to traverse a Trough of Disillusionment which is followed by a shallower Slope of Enlightenment before finally reaching the Plateau of Productivity In spite of the limitations and criticisms levied on this oversimplified description of a technology's life cycle it is nonetheless able to describe well the situation we are all experiencing within the brain machine interfacing community Our technology trigger was the development of batch processed multisite neuronal interfaces based on silicon during the 1980s and 1990s Sangler and Wise 1990 Campbell Jones et al 1991 Wise and Najafi 1991 Rousche and Normann 1992 Nordhausen Maynard et al 1996 This gave rise to a seemingly exponential growth of knowledge within the neurosciences leading to the expectation of thought controlled devices and prostheses for handicapped people in the very near future Chapin Moxon et al 1999 Wessberg Stambaugh et al 2000 Chapin and Moxon 2001 Serruya Hatsopoulos et al 2002 Unfortunately whereas significant steps towards artificial robotic limbs could have been implemented during the last decade Johannes Bigelow et al 2011 Oung Pohl et al 2012 Belter Segil et al 2013 direct invasive intracortical interfacing was not quite able to keep up with these expectations Insofar we are currently facing the challenging but tedious walk through the Trough of Disillusionment Undoubtedly more than two decades of intense research on brain machine interfaces BMI's have produced a tremendous wealth of information towards the ultimate goal a clinically useful cortical prosthesis Unfortunately even today after huge fiscal efforts the goal seems almost to be as far away as it was when it was originally put forward At the very least we have to state that one of the main challenges towards a clinically useful BMI has not been sufficiently answered yet regarding the long term or even truly chronic stability of the neural cortical interface as well as the signals it has to provide over a significant fraction of a human's lifespan Even the recently demonstrated advances in BMI's in both humans and non human primates have to deal with a severe decay of spiking activity that occurs over weeks and months Chestek Gilja et al 2011 Hochberg Bacher et al 2012 Collinger Kryger et al 2014 Nuyujukian Kao et al 2014 Stavisky Kao et al 2014 Wodlinger Downey et al 2014 and resolve to simplified features to keep a brain derived communication channel open Christie Tat et al 2014
