

Atlas of Cities

Paul Knox

PRINCETON UNIVERSITY PRESS

2014 256 pages 23 x 28cm. 1.58Kgg A\$52

More than half the world's population lives in cities, and that proportion is expected to rise to three-quarters by 2050. Urbanization is a global phenomenon, but the way cities are developing, the experience of city life, and the prospects for the future of cities vary widely from region to region.

The Atlas of Cities presents a unique taxonomy of cities that looks at different aspects of their physical, economic, social, and political structures; their interactions with each other and with their hinterlands; the challenges and opportunities they present; and where cities might be going in the future.

Each chapter explores a particular type of city--from the foundational cities of Greece and Rome and the networked cities of the Hanseatic League, through the nineteenth-century modernization of Paris and the industrialization of Manchester, to the green and "smart" cities of today.

Includes stunning info-graphics, maps, charts, tables, and photos.

Cities Beyond Borders Nicolas Kenny, Rebecca Madgin, 2016-05-23 Drawing on a body of research covering primarily Europe and the Americas but stretching also to Asia and Africa from the mid eighteenth century to the present this book explores the methodological and heuristic implications of studying cities in relation to one another Moving fluidly between comparative and transnational methods as well as across regional and national lines the contributors to this volume demonstrate the necessity of this broader view in assessing not just the fundamentals of urban life the way cities are occupied and organised on a daily basis but also the urban mindscape the way cities are imagined and represented In doing so the volume provides valuable insights into the advantages and limitations of using multiple cities to form historical inquiries The Monumental

Argyro Loukaki, 2025-03-14 *The Monumental* is an interdisciplinary collection of original cutting edge contributions by international researchers pursuing the epistemology and ontology of monuments over time and geography. The contributors are specialists in geography, architectural theory and history, prehistoric Greek and Roman archaeology, modern art, Byzantine studies, landscape theory and heritage reception. Against the global climate of flux and uncertainty in the present turbulent world, the durability of monuments as urban permanences emerges as one of the few remaining spatial and mental anchorages. As such, it is needed, maintained, enhanced, imitated, landscaped and even invented. In particular, the monumental as a spatial and aesthetic phenomenon of perpetual importance has recently acquired major new meanings. It now emerges as a key political, spatial, aesthetic, symbolic, architectural and archaeological manifestation or entity open to constantly new, even contradictory forms and expressions. This collection addresses the urgent need for relevant research on the monumental. It breaks new ground by posing fresh questions on the ontology, temporality, purpose, politics, scale, place, contestations and aesthetics of and around the monumental from prehistoric time to the present, as well as in both Eastern and Western geographies. Monuments are explored as bearers of the urban majestic, extraordinary and sublime. *The Monumental* poses questions about changing perceptions, the evocative power of representation, identity construction, ideology and symbolism, the vital necessity for a communicative and active public space around monuments, imitation processes across geographical space, time as well as the powers that construct, deconstruct or identify the monumental, but also the anti-monumental as such. Geographies of reference are the European space, the United States and Asia. Wide-ranging theorizations alternate with in-depth analyses of paradigmatic cases. Conventional as well as alternative forms of the monumental in the present shifting world are also pursued. *The Monumental* is of great value and interest to scholars, students and professionals in the fields of architectural theory, history and design, archaeology, art theory and history, Byzantine studies, restoration, urban design and planning, human urban and cultural geography, cultural studies, social anthropology, Asian studies as well as those in wider subdisciplines.

Global City Typologies Nigel C. Lewis, 2025-07-31 *Global City Typologies* explores the historical, cultural and socio-economic transactional forces in the development of existing cities through to newly planned and emerging cities. Individual chapters address different sets and typologies of global cities to analyse their comparative evolution and standing today. The separate parts and individual chapters have been grouped around 125 different established, planned and emerging cities and analysed according to different typologies and thematic categories that comprise historic cities, early trading cities, planned cities, emerging global cities, mega cities and megalopolitan agglomerations. These span five continents including the industrial cities of Chicago and Manchester, new capitals such as Brasilia and New Delhi, innovative cities such as Singapore and Tel Aviv and mega cities such as Mexico City. The book is fully illustrated throughout with modern and historical maps which enables visualisation of the forces that have shaped ongoing development of these major global cities. This is an essential book for students and professionals in urban design and planning, administrators, economists, designers and
