Light-Matter Interaction Wendell T. Hill, III, Chi H. Lee, 2006-12-15 This book draws together the principal ideas that form the basis of atomic molecular and optical science and engineering It covers the basics of atoms diatomic molecules atoms and molecules in static and electromagnetic fields and nonlinear optics Exercises and bibliographies supplement each chapter while several appendices present such important background information as physics and math definitions atomic and molecular data and tensor algebra Accessible to advanced undergraduates graduate students or researchers who have been trained in one of the conventional curricula of physics chemistry or engineering but who need to acquire familiarity with adjacent areas in order to pursue their research goals

Magnetically Activated and Guided Isotope Separation Thomas R. Mazur, 2015-11-19 This thesis describes a proof of principle experiment demonstrating a technique for stable isotope enrichment called Magnetically Activated and Guided Isotope Separation MAGIS Over the past century many enriched isotopes have become available thanks largely to electromagnetic separators called calutrons Due to substantial maintenance and operating costs the United States decommissioned the last of its calutrons in 1998 leading to demand for alternative methods of isotope separation The work presented here suggests the promise for MAGIS as a viable alternative to the calutrons The MAGIS technique combines optical pumping with a scalable magnetic field gradient to enrich atoms of a specific isotope in an atomic beam Benchmarking this work against the calutron using lithium as a test case the author demonstrated comparable enrichment in a manner that should scale to the production of similar quantities while requiring

vastly less energy input

An Introduction to Quantum Optics and Quantum Fluctuations Peter W. Milonni, 2019 This is an introduction to the quantum theory of light and its broad implications and applications A significant part of the book covers material with direct relevance to current basic and applied research such as quantum fluctuations and their role in laser physics and the theory of forces between macroscopic bodies Casimir effects The book includes numerous historical sidelights throughout and approximately seventy exercises The book provides detailed expositions of the theory with emphasis on general physical principles Foundational topics in classical and quantum electrodynamics are addressed in the first half of the book including the semiclassical theory of atom field interactions the quantization of the electromagnetic field in dispersive and dissipative media uncertainty relations and spontaneous emission The second half begins with a chapter on the Jaynes Cummings model dressed states and some distinctly quantum mechanical features of atom field interactions and includes discussion of entanglement the no cloning theorem von Neumann's proof concerning hidden variable theories Bell's theorem and tests of Bell inequalities The last two chapters focus on quantum fluctuations and fluctuation dissipation relations beginning with Brownian motion the Fokker Planck equation and classical and quantum Langevin equations Detailed calculations are presented for the laser linewidth spontaneous emission noise photon statistics of linear amplifiers and attenuators and other phenomena Van der Waals interactions Casimir forces the Lifshitz theory of molecular forces between macroscopic media and the many body theory of such forces based on dyadic Green functions are analyzed from the perspective of Langevin noise vacuum field fluctuations and zero point energy

Principles of Laser Spectroscopy and Quantum Optics Paul R. Berman, Vladimir S. Malinovsky, 2011-01-02 Principles of Laser Spectroscopy and Quantum Optics is an essential textbook for graduate students studying the interaction of optical fields with atoms It also serves as an ideal reference text for researchers working in the fields of laser spectroscopy and quantum optics The book provides a rigorous introduction to the prototypical problems of radiation fields interacting with two and three level atomic systems It examines the interaction of radiation with both atomic vapors and condensed matter systems the density matrix and the Bloch vector and applications involving linear absorption and saturation spectroscopy Other topics include hole burning dark states slow light and coherent transient spectroscopy as well as atom optics and atom interferometry In the second half of the text the authors consider applications in which the radiation field is quantized Topics include spontaneous decay optical pumping sub Doppler laser cooling the Heisenberg equations of motion for atomic and field operators and light scattering by atoms in both weak and strong external fields The concluding chapter offers methods for creating entangled and spin squeezed states of matter Instructors can create a one semester course based on this book by combining the introductory chapters with a selection of the more advanced material A solutions manual is available to teachers Rigorous introduction to the interaction of optical fields with atoms Applications include linear and nonlinear spectroscopy dark states and slow light Extensive chapter on atom optics and atom interferometry Conclusion explores entangled and spin squeezed states of matter Solutions

manual available only to teachers *Physics on Your Feet: Berkeley Graduate Exam Questions* Dmitry Budker, Alexander O. Sushkov, 2015 *Physics on Your Feet* gives a collection of physics problems covering the broad range of topics in classical and modern physics that were or could have been asked at oral PhD exams at Berkeley The questions are easy to formulate but some of them can only be answered using an out of the box approach Detailed solutions are provided from which the reader is guaranteed to learn a lot about the physicists way of thinking The book is also packed full of cartoons and dry humour to help take the edge off the stress and anxiety surrounding exams This is a helpful guide to students preparing for their exams as well as to University lecturers looking for good instructive problems No exams are necessary to enjoy the book
