

MAIN FRAME - DESCRIPTION

1. General (Ref. Fig. 1 to 6)

- A. The main frame of the complete fuselage extends from STA672(FR1) to STA5658(FR103) for A/C 002 and from STA766 (FR1) to STA5842(FR103) for A/C 003-999, and consists of 9 fuselage sections. For detailed information refer to the following illustrations:

 - Fig. 3 Fuselage - Frames/Station Diagram
 - Fig. 4 Fuselage - Frames/Station Diagram
 - Fig. 5 Seat tracks - Y Reference Stations
 - Fig. 6 Pressurized Regions Diagram
- B. Each section is dealt with as a completely separate part except for the tail section which is subdivided into tail, aft pressure bulkhead and tail cone. Because of the aircraft constructional principles, all components of section 53-30-00 are dealt with on section planes in the load bearing structure. Section 53-30-00 can then be traced back to the level of Section 53-10-00 and is dealt with in sub-sections 53-11-00 to 53-19-00 (fuselage sections), 53-19-11 (aft pressure bulkhead) and 53-19-21 (tail cone).
- C. The fuselage consists of pressurized and unpressurized regions and has various contours.
- D. The main frame components are mainly produced from high strength aluminum alloys. The load bearing structure consists of sheets, forged or machined parts and extruded parts. Most skin panels are partly chemically etched.

The Design of Aircraft Landing Gear Robert Kyle Schmidt, 2021-02-18 The aircraft landing gear and its associated systems represent a compelling design challenge simultaneously a system a structure and a machine it supports the aircraft on the ground absorbs landing and braking energy permits maneuvering and retracts to minimize aircraft drag Yet as it is not required during flight it also represents dead weight and significant effort must be made to minimize its total mass The Design of Aircraft Landing Gear written by R Kyle Schmidt PE B A Sc Mechanical Engineering M Sc Safety and Aircraft Accident Investigation Chairman of the SAE A 5 Committee on Aircraft Landing Gear is designed to guide the reader through the key principles of landing system design and to provide additional references when available Many problems which must be confronted have already been addressed by others in the past but the information is not known or shared

leading to the observation that there are few new problems but many new people The Design of Aircraft Landing Gear is intended to share much of the existing information and provide avenues for further exploration The design of an aircraft and its associated systems including the landing system involves iterative loops as the impact of each modification to a system or component is evaluated against the whole It is rare to find that the lightest possible landing gear represents the best solution for the aircraft the lightest landing gear may require attachment structures which don't exist and which would require significant weight and compromise on the part of the airframe structure design With those requirements and compromises in mind The Design of Aircraft Landing Gear starts with the study of airfield compatibility aircraft stability on the ground the correct choice of tires followed by discussion of brakes wheels and brake control systems Various landing gear architectures are investigated together with the details of shock absorber designs Retraction kinematics and mechanisms are studied as well as possible actuation approaches Detailed information on the various hydraulic and electric services commonly found on aircraft and system elements such as dressings lighting and steering are also reviewed Detail design points the process of analysis and a review of the relevant requirements and regulations round out the book content The Design of Aircraft Landing Gear is a landmark work in the industry and a must read for any engineer interested in updating specific skills and students preparing for an exciting career
