Feferman on Foundations Gerhard Jäger, Wilfried Sieg, 2018-04-04 This volume honours the life and work of Solomon Feferman one of the most prominent mathematical logicians of the latter half of the 20th century In the collection of essays presented here researchers examine Feferman s work on mathematical as well as specific methodological and philosophical issues that tie into mathematics Feferman s work was largely based in mathematical logic namely model theory set theory proof theory and computability theory but also branched out into methodological and philosophical issues making it well known beyond the borders of the mathematics community With regard to methodological issues Feferman supported concrete projects On the one hand these projects calibrate the proof theoretic strength of subsystems of analysis and set theory and provide ways of overcoming the limitations imposed by Gödel s incompleteness theorems through appropriate conceptual expansions On the other they seek to identify novel axiomatic foundations for mathematical practice truth theories and category theory In his philosophical research Feferman explored questions such as What is logic and proposed particular positions regarding the foundations of mathematics including for example his conceptual structuralism The contributing authors of the volume examine all of the above issues Their papers are accompanied by an autobiography presented by Feferman that reflects on the evolution and intellectual contexts of his work The contributing authors critically examine Feferman s work and in part actively expand on his concrete mathematical projects The volume illuminates Feferman s distinctive work and in the process provides an enlightening perspective on the foundations of mathematics and logic

Rough Sets and Intelligent Systems - Professor Zdzisław Pawlak in Memoriam Andrzej Skowron, Zbigniew Suraj, 2012-08-16 This book is dedicated to the memory of Professor Zdzisław Pawlak who passed away almost six years ago He is the founder of the Polish school of Artificial Intelligence and one of the pioneers in Computer Engineering and Computer Science with worldwide influence He was a truly great scientist researcher teacher and a human being This book prepared in two volumes contains more than 50 chapters This demonstrates that the scientific approaches discovered by Professor Zdzisław Pawlak especially the rough set approach as a tool for dealing with imperfect knowledge are vivid and intensively explored by many researchers in many places throughout the world The submitted papers prove that interest in rough set research is growing and is possible to see many new excellent results both on theoretical foundations and applications of rough sets alone or in combination with other

approaches We are proud to offer the readers this book *The Philosophy of Mathematics and Logic in the 1920s and 1930s in Poland* Roman Murawski, 2014-08-27 The aim of this book is to present and analyze philosophical conceptions concerning mathematics and logic as formulated by Polish logicians mathematicians and philosophers in the 1920s and 1930s It was a remarkable period in the history of Polish science in particular in the history of Polish logic and mathematics Therefore it is justified to ask whether and to what extent the development of logic and mathematics was accompanied by a philosophical reflection We try to answer those questions by analyzing both works of Polish logicians and mathematicians who have a philosophical temperament as well as their research practice Works and philosophical views of the following Polish scientists will be analyzed Wacław Sierpiński Zygmunt Janiszewski Stefan Mazurkiewicz Stefan Banach Hugo Steinhaus Eustachy Łukaszycki and Leon Chwistek Jan Łukasiewicz Zygmunt Zawirski Stanisław Leśniewski Tadeusz Kotarbiński Kazimierz Ajdukiewicz Alfred Tarski Andrzej Mostowski and Henryk Mehlberg Jan Śleszyński Stanisław Zarembka and Witold Wilkosz To indicate the background of scientists being active in the 1920s and 1930s we consider in Chapter 1 some predecessors in particular Jan Łukasiewicz Józef Maria Hoene-Wroński Samuel Dickstein and Edward Stamm *The Lvov-Warsaw School. Past and Present* Ángel Garrido, Urszula Wybraniec-Skardowska, 2018-06-12 This is a collection of new investigations and discoveries on the history of a great tradition the Lvov Warsaw School of logic and mathematics by the best specialists from all over the world The papers range from historical considerations to new philosophical logical and mathematical developments of this impressive School including applications to Computer Science Mathematics Metalogic Scientific and Analytic Philosophy Theory of Models and Linguistics **Models for Modalities** Jaakko Hintikka, 2012-12-06 The papers collected in this volume were written over a period of some eight or nine years with some still earlier material incorporated in one of them Publishing them under the same cover does not make a continuous book of them The papers are thematically connected with each other however in a way which has led me to think that they can naturally be grouped together In any list of philosophically important concepts those falling within the range of application of modal logic will rank high in interest They include necessity possibility obligation permission knowledge belief perception memory hoping and striving to mention just a few of the more obvious ones When a satisfactory semantics in the sense of Tarski and Carnap was first developed for modal logic a fascinating new set of methods and ideas was thus made available for philosophical studies The pioneers of this model theory of modality include prominently Stig Kanger and Saul Kripke Several others were working in the same area independently and more or less concurrently Some of the older papers in this collection especially Quantification and Modality and Modes of Modality serve to clarify some of the main possibilities in the semantics of modal logics in general *The Tree of Knowledge and Other Essays* Wright, 2021-09-20 In an autobiographical introduction the author tells about the two forces which have shaped his intellectual life philosophy as an academic profession and philosophy as a search for a view of life The book accordingly divides in two parts The essays in the first part survey developments in logic and analytical

philosophy in the perspective of the closing century and in the light of the author's long experience and participation in them. There are also essays on Musil's criticism of Mach on the Finnish philosopher Eino Kaila's search for a monistic world view and on Wittgenstein's place on the cultural map of the century. The papers in the second part deal with traits of contemporary civilization which have become problematic thanks to the impact of technological developments on political and social forms of life. Humanism, modernity and scientific rationality are key ideas taken up for critical scrutiny.

Sets and Extensions in the Twentieth Century, 2012-01-24 Set theory is an autonomous and sophisticated field of mathematics that is extremely successful at analyzing mathematical propositions and gauging their consistency strength. It is as a field of mathematics that both proceeds with its own internal questions and is capable of contextualizing over a broad range which makes set theory an intriguing and highly distinctive subject. This handbook covers the rich history of scientific turning points in set theory providing fresh insights and points of view. Written by leading researchers in the field, both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates, graduate students and researchers in mathematics, the history of philosophy and any discipline such as computer science, cognitive psychology and artificial intelligence for whom the historical background of his or her work is a salient consideration. Serves as a singular contribution to the intellectual history of the 20th century. Contains the latest scholarly discoveries and interpretative insights.

Petr Hájek on Mathematical Fuzzy Logic Franco Montagna, 2014-09-23 This volume celebrates the work of Petr Hájek on mathematical fuzzy logic and presents how his efforts have influenced prominent logicians who are continuing his work. The book opens with a discussion on Hájek's contribution to mathematical fuzzy logic and with a scientific biography of him progresses to include two articles with a foundation flavour that demonstrate some important aspects of Hájek's production, namely a paper on the development of fuzzy sets and another paper on some fuzzy versions of set theory and arithmetic. Articles in the volume also focus on the treatment of vagueness, building connections between Hájek's favorite fuzzy logic and linguistic models of vagueness. Other articles introduce alternative notions of consequence relation, namely the preservation of truth degrees which is discussed in a general context and the differential semantics. For the latter a surprisingly strong standard completeness theorem is proved. Another contribution also looks at two principles valid in classical logic and characterizes the three main t -norm logics in terms of these principles. Other articles with an algebraic flavour offer a summary of the applications of lattice ordered groups to many valued logic and to quantum logic as well as an investigation of prelinearity in varieties of pointed lattice ordered algebras that satisfy a weak form of distributivity and have a very weak implication. The last part of the volume contains an article on possibilistic modal logics defined over MTL chains, a topic that Hájek discussed in his celebrated work *Metamathematics of Fuzzy Logic* and another one where the authors, besides offering unexpected premises such as proposing to call Hájek's basic fuzzy logic HL instead of BL, propose a very weak system called SL as a candidate for the role of the really basic fuzzy logic. The paper also provides a generalization of the prelinearity axiom which

was investigated by Hjek in the context of fuzzy logic

Mathematical Logic Roman Kossak, 2018-10-03 This book presented in two parts offers a slow introduction to mathematical logic and several basic concepts of model theory such as first order definability types symmetries and elementary extensions Its first part Logic Sets and Numbers shows how mathematical logic is used to develop the number structures of classical mathematics The exposition does not assume any prerequisites it is rigorous but as informal as possible All necessary concepts are introduced exactly as they would be in a course in mathematical logic but are accompanied by more extensive introductory remarks and examples to motivate formal developments The second part Relations Structures Geometry introduces several basic concepts of model theory such as first order definability types symmetries and elementary extensions and shows how they are used to study and classify mathematical structures Although more advanced this second part is accessible to the reader who is either already familiar with basic mathematical logic or has carefully read the first part of the book Classical developments in model theory including the Compactness Theorem and its uses are discussed Other topics include tameness minimality and order minimality of structures The book can be used as an introduction to model theory but unlike standard texts it does not require familiarity with abstract algebra This book will also be of interest to mathematicians who know the technical aspects of the subject but are not familiar with its history and philosophical background

Assumptions of Grand Logics J.K. Feibleman, 2012-12-06 A system of philosophy of the sort presented in this and the following volumes begins with logic Philosophy properly speaking is characterized by the kind of logic it employs for what it employs it assumes however silently and what it assumes it presupposes The logic stands behind the ontology and is so to speak metaphysically prior One word of caution The philosophical aspects of logic have lagged behind the mathematical aspects in point of view of interest and development The work of N Rescher and others have gone a long way to correct this However their work on philosophical logic has been more concerned with the logical than with the philosophical aspects I have in mind another approach one that would call attention to the ontological systematic metaphysics or metaphysical critical ontology aspects whichever term you prefer It is this approach which I have pursued in the following chapters Since together they stand at the head of a system of philosophy which has been developed in some seventeen books a system which ranges over all of the topics of philosophy the chosen approach can be seen as the necessary one But I have not written any logic I have merely indicated the sort of logic that has to be written

Hilbert's Program M. Detlefsen, 2013-03-09 Hilbert s Program was founded on a concern for the phenomenon of paradox in mathematics To Hilbert the paradoxes which are at once both absurd and irresistible revealed a deep philosophical truth

namely that there is a discrepancy between the laws according to which the mind of homo mathematicus works and the laws governing objective mathematical fact. Mathematical epistemology is therefore to be seen as a struggle between a mind that naturally works in one way and a reality that works in another. Knowledge occurs when the two cooperate. Conceived in this way there are two basic alternatives for mathematical epistemology: a skeptical position which maintains either that mind and reality seldom or never come to agreement or that we have no very reliable way of telling when they do; and a non-skeptical position which holds that there is significant agreement between mind and reality and that their potential discrepancies can be detected, avoided and thus kept in check. Of these two Hilbert clearly embraced the latter and proposed a program designed to vindicate the epistemological riches represented by our natural if non-literal ways of thinking. Brouwer on the other hand opted for a position closer in Hilbert's opinion to that of the skeptic. Having decided that epistemological purity could come only through sacrifice he turned his back on his classical heritage to accept a higher calling. Emerging

Paradigms in Machine Learning Sheela Ramanna, Lakhmi C Jain, Robert J. Howlett, 2012-07-31 This book presents fundamental topics and algorithms that form the core of machine learning ML research as well as emerging paradigms in intelligent system design. The multidisciplinary nature of machine learning makes it a very fascinating and popular area for research. The book is aiming at students, practitioners and researchers and captures the diversity and richness of the field of machine learning and intelligent systems. Several chapters are devoted to computational learning models such as granular computing, rough sets and fuzzy sets. An account of applications of well known learning methods in biometrics, computational stylistics, multi-agent systems, spam classification including an extremely well written survey on Bayesian networks shed light on the strengths and weaknesses of the methods. Practical studies yielding insight into challenging problems such as learning from incomplete and imbalanced data, pattern recognition of stochastic episodic events and on-line mining of non-stationary data streams are a key part of this book. **Beyond the Horizon of Computability** Marcella Anselmo, Gianluca Della

Vedova, Florin Manea, Arno Pauly, 2020-06-23 This book constitutes the proceedings of the 16th Conference on Computability in Europe CiE 2020 which was planned to be held in Fisciano Italy during June 29 until July 3 2020. The conference moved to a virtual format due to the coronavirus pandemic. The 30 full and 5 short papers presented in this volume were carefully reviewed and selected from 72 submissions. CiE promotes the development of computability related science ranging over mathematics, computer science and applications in various natural and engineering sciences such as physics and biology as well as related fields such as philosophy and history of computing. CiE 2020 had as its motto Beyond the Horizon of Computability reflecting the interest of CiE in research transgressing the traditional boundaries of computability theory.
