Adaptation And Human Behavior An Anthropological Perspective Evolutionary Foundations Of Human Behavior:

Adaptation and Human Behavior Lee Cronk, Napoleon A. Chagnon, William Irons, This volume presents state of the art empirical studies working in a paradigm that has become known as human behavioral ecology The emergence of this approach in anthropology was marked by publication by Aldine in 1979 of an earlier collection of studies edited by Chagnon and Irons entitled *Evolutionary Biology and Human Social Behavior An Anthropological Perspective* During the two decades that have passed since then this innovative approach has matured and expanded into new areas that are explored here The book opens with an introductory chapter by Chagnon and Irons tracing the origins of human behavioral ecology and its subsequent development Subsequent chapters written by both younger scholars and established researchers cover a wide range of societies and topics organized into six sections The first section includes two chapters that provide historical background on the development of human behavioral ecology and compare it to two complementary approaches in the study of evolution and human behavior evolutionary psychology and dual inheritance theory The second section includes five studies of mating efforts in a variety of societies from South America and Africa The third section covers parenting with five studies on societies from Africa Asia and North America The fourth section breaks somewhat with the tradition in human behavioral ecology by focusing on one particularly problematic issue the demographic transition using data from Europe North America and Asia The fifth section includes studies of cooperation and helping behaviors using data from societies in Micronesia and South America The sixth and final section consists of a single chapter that places the volume in a broader critical and comparative context The contributions to this volume demonstrate with a high degree of theoretical and methodological sophistication the maturity and freshness of this new paradigm in the study of human behavior The volume will be of interest to anthropologists and other professions working on the study of cross cultural human behavior Lee Cronk is associate professor of anthropology at Rutgers University Napoleon Chagnon is professor of anthropology emeritus at the University of California Santa Barbara William Irons is professor of anthropology at Northwestern University Evanston Illinois

Foundations of Evolutionary Psychology

Charles Crawford, Dennis Krebs, 2012-10-12 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments the nature of the psychological mechanisms natural selection shaped to deal with those ancient problems and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world Evolutionary psychology is currently advancing our understanding of altruism moral behavior family violence sexual aggression warfare aesthetics the nature of language and gender differences in mate choice and perception It is helping us understand the relationships between cognitive science developmental psychology behavior genetics personality and social psychology Foundations of Evolutionary Psychology provides an up to date review of the ideas issues and applications of contemporary evolutionary psychology It is suitable for senior undergraduates first year graduate students or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field It will be interesting to psychologists anthropologists sociologists economists philosophers cognitive scientists and anyone interested in using new developments in the theory of evolution to gain new insights into human behavior

Mind the Gap

Peter Kappeler, Joan Silk, 2009-11-09 This volume features a collection of essays by primatologists anthropologists biologists and psychologists who offer some answers to the question of what makes us human i e what is the nature and width of the gap that separates us from other primates The chapters of this volume summarize the latest research on core aspects of behavioral and cognitive traits that make humans such unusual animals All contributors adopt an explicitly comparative approach which is based on the premise that comparative studies of our closest biological relatives the nonhuman primates provide the logical foundation for identifying human universals as well as evidence for evolutionary continuity in our social behavior Each of the chapters in this volume provides comparative analyses of relevant data from primates and humans or pairs of chapters examine the same topic from a human or primatological perspective respectively Together they cover six broad topics that are relevant to identifying potential human behavioral universals Family and social organization Predation pressure is thought to be the main force favoring group living in primates but there is great diversity in the size and structure of social groups across the primate order Research on the behavioral ecology of primates and other animals has revealed that the distribution of males and females in space and time can be explained by sex specific adaptations that are sensitive to factors that limit their fitness access to resources for females and access to potential mates for males

Breastfeeding

Patricia Stuart-Macadam, 2017-09-29 Breastfeeding is a biocultural phenomenon not only is it a biological process but it is also a culturally determined behavior As such it has important implications for understanding the past present and future condition of our species In general scholars have emphasized either the biological or the cultural aspects of breastfeeding but not both As biological anthropologists the editors of this volume feel that an evolutionary approach combining both aspects is essential One of the goals of their book is to incorporate data from diverse

fields to present a more holistic view of breastfeeding through the inclusion of research from a number of different disciplines including biological and social cultural anthropology nutrition and medicine The resulting book presenting the complexity of the issues surrounding very basic decisions about infant nutrition will fill a void in the existing literature on breastfeeding

The Oxford Handbook of the Study of Religion Michael Stausberg, Steven Engler, 2016 The Oxford Handbook of the Study of Religions provides a comprehensive overview of the academic study of religions Written by an international team of leading scholars its fifty one chapters are divided thematically into seven sections The first section addresses five major conceptual aspects of research on religion Part two surveys eleven main frameworks of analysis interpretation and explanation of religion Reflecting recent turns in the humanities and social sciences part three considers eight forms of the expression of religion Part four provides a discussion of the ways societies and religions or religious organizations are shaped by different forms of allocation of resources i e economy Other chapters in this section consider law the media nature medicine politics science sports and tourism Part five reviews important developments distinctions and arguments for each of the selected topics The study of religion addresses religion as a historical phenomenon and part six looks at seven historical processes Religion is studied in various ways by many disciplines and this Handbook shows that the study of religion is an academic discipline in its own right The disciplinary profile of this volume is reflected in part seven which considers the history of the discipline and its relevance Each chapter in the Handbook references at least two different religions to provide fresh and innovative perspectives on key issues in the field This authoritative collection will advance the state of the discipline and is an invaluable reference for students and scholars

The Parasite-Stress Theory of Values and Sociality Randy Thornhill, Corey L. Fincher, 2014-07-17 This book develops and tests an ecological and evolutionary theory of the causes of human values the core beliefs that guide people s cognition and behavior and their variation across time and space around the world We call this theory the parasite stress theory of values or the parasite stress theory of sociality The evidence we present in our book indicates that both a wide span of human affairs and major aspects of human cultural diversity can be understood in light of variable parasite infectious disease stress and the range of value systems evoked by variable parasite stress The same evidence supports the hypothesis that people have psychological adaptations that function to adopt values dependent upon local infectious disease adversity The authors have identified key variables variation in infectious disease adversity and in the core values it evokes for understanding these topics and in novel and encompassing ways Although the human species is the focus in the book evidence presented in the book shows that the parasite stress theory of sociality informs other topics in ecology and evolutionary biology such as variable family organization and speciation processes and biological diversity in general in non human animals

The Cannibal Within Lewis F. Petrino, The Cannibal Within offers an evolutionary account of the propensity of human beings in extreme circumstances to eat other human beings despite the strong Western taboo against such practices What sets this volume apart from the large body of

literature on cannibalism both popular and anthropological is the underlying premise cannibalism as an alternative to starvation is tacitly condoned by the same biological morality that would condemn cannibalism of other sorts in non threatening situations Deep as the taboos may be the survival instinct runs even deeper The title of the book reflects the author's belief that cannibalism is not a pathology that erupts in psychotic individuals but is a universal adaptive strategy that is evolutionarily sound The cannibal is within all of us and cannibals are within all cultures should the circumstances demand cannibalism's appearance and usage Petrino's work is rich in historical detail and rises to a level of theoretical sophistication in addressing a subject too often dealt with in sensationalist terms The major instances in which survival cannibalism has occurred convinced the author that there is a consistent pattern and a uniform regularity of order in which different kinds of individuals are consumed In considering who eats whom when and under what circumstances this regularity appears and it is consistent with what would be expected on the basis of evolutionary or Darwinian theory In short he concludes that starvation cannibalism is not a manifestation of the chaotic psychotic behavior of individuals who are driven to madness but reveals underlying characteristics of evolved human beings Lewis Petrino is professor emeritus in the Department of Psychology of the University of California Riverside and is currently a resident of Berkeley California

The Handbook of Evolutionary Psychology, Volume 1 David M. Buss, 2015-09-29 The indispensable reference tool for the groundbreaking science of evolutionary psychology Why is the mind designed the way it is How does input from the environment interact with the mind to produce behavior These are the big unanswered questions that the field of evolutionary psychology seeks to explore The Handbook of Evolutionary Psychology is the seminal work in this vibrant quickly developing new discipline In this thorough revision and expansion luminaries in the field provide an in depth exploration of the foundations of evolutionary psychology and explain the new empirical discoveries and theoretical developments that continue at a breathtaking pace Evolutionary psychologists posit that the mind has a specialized and complex structure just as the body has a specialized and complex structure From this important theoretical concept arises the vast array of possibilities that are at the core of the field which seeks to examine such traits as perception language and memory from an evolutionary perspective This examination is intended to determine the human psychological traits that are the products of sexual and natural selection and as such to chart and understand human nature Join the discussion of the big questions addressed by the burgeoning field of evolutionary psychology Explore the foundations of evolutionary psychology from theory and methods to the thoughts of EP critics Discover the psychology of human survival mating parenting cooperation and conflict culture and more Identify how evolutionary psychology is interwoven with other academic subjects and traditional psychological disciplines The Handbook of Evolutionary Psychology is the definitive guide for every psychologist and student interested in keeping abreast of new ideas in this quickly developing field **Handbook of Evolutionary Psychology** Charles Crawford, Dennis L. Shackelford, 2021 The Oxford Handbook of Evolutionary Psychology and Parenting provides a comprehensive resource for work on how our evolutionary past informs current parenting roles and practices It features chapters from leaders in the field covering state of the art research The Handbook is designed for advanced undergraduates graduates and professionals in psychology anthropology biology sociology and demography as well as many other social and life science disciplines It is the first resource of its kind that brings together empirical and theoretical contributions from scholarship at the intersection of evolutionary psychology and parenting Each of the authors has a Ph D in evolutionary psychology and much of their research focuses on violence and conflict in families and romantic relationships

Life Histories of the Dobe !Kung Nancy Howell, 2010 A clearly presented and terrifically detailed work from the perspective of human evolutionary life histories Dr Howell has written a text that manages to raise as many intriguing questions as it provides to answer Eric A Roth author of Culture Biology and Anthropological Demography Nancy Howell's book on the Demography of the Dobe Kung became an anthropological classic the first in depth analysis of the population structures and life histories of a foraging society Three decades later Howell returns to her initial data set to ask new questions inspired by Life History Theory In the process she examines how variations in group composition impact the well being of Kung children revealing that sharing is not just with one's closest relatives Sarah Blaffer Hrdy author of Mothers and Others The Evolutionary Origins of Mutual Understanding This is a unique scholarly book that reads like a detective novel Howell uses demographic anthropometric and foraging data on the Kung hunter gatherers of Southern Africa to investigate what explains variation in the nutritional well being of their children Each chapter builds on the previous one and through a process of elimination brings us closer to the answers which are often surprising Along the way we see how food sharing is necessary to explain the peculiar elements of human life history Frank Marlowe author of The Hadza Hunter Gatherers of Tanzania

Endocrinology of Social Relationships Peter T.

Ellison, Peter B. Gray, 2012-03-05 In social relationships whether between mates parents and offspring or friends we find much of life's meaning But in these relationships so critical to our well being might we also detect the workings even directives of biology This book a rare melding of human and animal research and theoretical and empirical science ventures into the most interesting realms of behavioral biology to examine the intimate role of endocrinology in social relationships The importance of hormones to reproductive behavior from breeding cycles to male sexual display is well known What this book considers is the increasing evidence that hormones are just as important to social behavior Peter Ellison and Peter Gray include the latest findings both practical and theoretical on the hormonal component of both casual interactions and fundamental bonds The contributors senior scholars and rising scientists whose work is shaping the field go beyond the proximate mechanics of neuroendocrine physiology to integrate behavioral endocrinology with areas such as reproductive ecology and life history theory Ranging broadly across taxa from birds and rodents to primates the volume pays particular attention to human endocrinology and social relationships a focus largely missing from most works of behavioral endocrinology

Law, Economics and Evolutionary Theory Peer Zumbansen, Galf-Peter Calliess, 2011-01-01 Evolutionary theory belongs to the rare species of theories that are simultaneously fundamental and over arching implicating as it does numerous life contexts as well as an array of scholarly disciplines Armed with a profound grasp of evolutionary theory and its implications to social research Professors Zumbansen and Calliess have mobilized an appropriately diverse and truly stellar group of academics to investigate how this theory may provide new insights about law economics and their inter relations Cast against an especially broad intellectual backdrop set by the editors this volume is sure to become a standard reference in literature Amir N Licht Radzyner School of Law Israel Zumbansen and Calliess have done a wonderful job in assembling papers from the leading scholars in the field who draw on evolutionary approaches for explaining developments in both economics and the law Anybody interested in issues of institutional change will be inspired by the wealth of ideas and the diversity of perspectives Stefan Voigt University of Hamburg Germany Law and economics has arguably become one of the most influential theories in contemporary legal theory and adjudication The essays in this volume authored by both legal scholars and economists constitute lively and critical engagements between law and economics and new institutional economics from the perspectives of legal and evolutionary theory The result is a fresh look at core concepts in law and economics such as institutions institutional change and market failure that offer new perspectives on the relationship between economic and legal governance The increasingly transnational dimension of regulatory governance presents lawyers economists and social scientists with an unprecedented number of complex analytical and conceptual questions The contributions to this volume engage with legal theory new institutional economics economic sociology and evolutionary economics in an interdisciplinary assessment of the capacities and limits of the state markets and institutions Drawing as well upon legal sociology and the philosophy of law the authors expand and transform the known terrain of law and

economics by applying evolutionary theory to both law and economics from a domestic and transnational perspective Legal scholars evolutionary and regulatory theorists economists economic sociologists economic historians and political scientists will find this cutting edge volume both challenging and engaging **The Anthropology of Childhood** David F.
