Adaptive Multimodal Interactive Systems Author Matthias Bezold Jul 2011:

Adaptive Multimodal Interactive Systems Matthias Bezold, Wolfgang Minker, 2011-07-12 Adaptive Multimodal Interactive Systems introduces a general framework for adapting multimodal interactive systems and comprises a detailed discussion of each of the steps required for adaptation. This book also investigates how interactive systems may be improved in terms of usability and user friendliness while describing the exhaustive user tests employed to evaluate the presented approaches. After introducing general theory a generic approach for user modeling in interactive systems is presented ranging from an observation of basic events to a description of higher level user behavior. Adaptations are presented as a set of patterns similar to those known from software or usability engineering. These patterns describe recurring problems and present proven solutions. The authors include a discussion on when and how to employ patterns and provide guidance to the system designer who wants to add adaptivity to interactive systems. In addition to these patterns the book introduces an adaptation framework which exhibits an abstraction layer using Semantic Web technology. Adaptations are implemented on top of this abstraction layer by creating a semantic representation of the adaptation patterns. The patterns cover both graphical interfaces as well as speech based and multimodal interactive systems. *Adapting Multimodal Interactive Systems to User Behavior* Matthias Bezold, 2011

Multimodal Usability Niels Ole Bernsen, Laila Dybkjær, 2009-10-03 This preface tells the story of how Multimodal Usability responds to a special challenge. Chapter 1 describes the goals and structure of this book. The idea of describing how to make multimodal computer systems usable arose in the European Network of Excellence SIMILAR Taskforce for creating human machine interfaces SIMILAR to human human communication 2003-2007 www.similar.cc. SIMILAR brought together people from multimodal signal processing and usability with the aim of creating enabling technologies for new kinds of multimodal systems and demonstrating results in research prototypes. Most of our colleagues in the network were in fact busy extracting features and figuring out how to demonstrate progress in working interactive systems while claiming not to have too much of a notion of usability in system development and evaluation. It was proposed that the authors support the usability of the many multimodal prototypes underway by researching and presenting a methodology for building usable multimodal systems. We accepted the challenge first and foremost no doubt because the formidable team spirit in SIMILAR could make people accept outrageous things. Second having worked for nearly two decades on making multimodal systems usable we were curious at the opportunity to try to understand what happens to traditional usability work that is work in human computer interaction centred around traditional graphical user interfaces GUIs when systems become as multimodal and as advanced in other ways as those we build in research today.

Quantifying Quality Aspects of Multimodal Interactive Systems Christine Kühnel, 2012-06-07 This book systematically addresses the quantification of quality aspects of multimodal interactive systems. The conceptual structure is based on a schematic view on human computer interaction where the user interacts with the system and perceives it via

input and output interfaces Thus aspects of multimodal interaction are analyzed first followed by a discussion of the evaluation of output and input and concluding with a view on the evaluation of a complete system *Enhancing Software Quality of Multimodal Interactive Systems* Martin Walter Fischbach, 2017
