This text provides readers with the foundation on which an understanding of applied statistics rests. **Intended Audience:** This book is ideal for advanced undergraduates, graduate students, and researchers in the social sciences who need to understand and use relatively advanced statistical methods but whose mathematical preparation for this work is insufficient. **Learn more about The Little Green Book QASS Series [Click Here](#)**

A Mathematical Primer for Social Statistics John Fox, 2009 The ideal primer for students and researchers across the social sciences who wish to master the necessary maths in order to pursue studies involving advanced statistical methods

Applied Regression Analysis and Generalized Linear Models John Fox, 2015-03-18 Combining a modern data analytic perspective with a focus on applications in the social sciences, the Third Edition of *Applied Regression Analysis and Generalized Linear Models* provides in-depth coverage of regression analysis, generalized linear models, and closely related methods such as bootstrapping and missing data. Updated throughout, this Third Edition includes new chapters on mixed effects models for hierarchical and longitudinal data. Although the text is largely accessible to readers with a modest background in statistics and mathematics, author John Fox also presents more advanced material in optional sections and chapters throughout the book. Accompanying website resources containing all answers to the end of chapter exercises, Answers to odd numbered questions, as well as datasets and other student resources are available on the author's website. **NEW Bonus chapter on Bayesian Estimation of Regression Models** also available at the author's website

Basic Math for Social Scientists Timothy Hagle, 1996-03 Aimed at providing readers who want a quick refresher course in mathematics with an informal review, Timothy M. Hagle's volume offers dozens of worked-out examples of such mathematical concepts as algebra, sets, limits, continuity, differential calculus, multivariate functions, partial derivatives, integral calculus, and matrix algebra. In addition, Hagle provides problem sets so that readers can practice their grasp of standard mathematical procedures; answers to these problem sets are contained in the appendixes. Written in a friendly style, *Basic Math for Social Scientists: Problems and Solutions* provides readers with an informal approach to mathematical procedures without proofs

An R Companion to Applied Regression John Fox, Sanford Weisberg, 2010-11-29 This is a broad introduction to the R statistical computing environment in the context of applied regression analysis. It is a thoroughly updated edition of John Fox's bestselling text *An R and S Plus Companion to Applied Regression* (SAGE, 2002). The Second Edition is intended as a companion to any course on modern applied regression analysis. The authors provide a step-by-step guide to using the high-quality free statistical software R, an emphasis on integrating statistical computing in R with the practice of data analysis, coverage of generalized linear models, enhanced coverage of R graphics and programming, and substantial web-based support materials

Statistical Methods for Categorical Data Analysis Daniel Powers, Yu

Xie,2008-11-13 This book provides a comprehensive introduction to methods and models for categorical data analysis and their applications in social science research Companion website also available at <https://web.space.utexas.edu/dpowers/www>

Quantitative Narrative Analysis Roberto Franzosi,2010 Quantitative Narrative Analysis focuses on the following issues 1 the fundamental features of narrative as a specific type of text genre with certain invariant linguistic properties 2 how the invariant properties of narrative can be used to structure narrative information in ways that basic qualitative information can then be analyzed quantitatively story grammars or Subject Action Object and respective modifiers such as Time and Space of Action 3 reliability and how the computer and linguistic framework of the approach greatly increase data reliability 4 data analysis the book does not focus on general problems of data analysis it will show how textual data can be analyzed with numbers

Multivariate General Linear Models Richard F. Haase,2011-11-23 This title provides an integrated introduction to multivariate multiple regression analysis MMR and multivariate analysis of variance MANOVA It defines the key steps in analyzing linear model data and introduces multivariate linear model analysis as a generalization of the univariate model Richard F Haase focuses on multivariate measures of association for four common multivariate test statistics presents a flexible method for testing hypotheses on models and emphasizes the multivariate procedures attributable to Wilks Pillai Hotelling and Roy

Nonrecursive Models Pamela Paxton,John R. Hipp,Sandra Marquart-Pyatt,2011-03-08 Nonrecursive Models is a clear and concise introduction to the estimation and assessment of nonrecursive simultaneous equation models This unique monograph gives practical advice on the specification and identification of simultaneous equation models how to assess the quality of the estimates and how to correctly interpret results

Event History and Survival Analysis Paul D. Allison,2014-02-19 Social scientists are interested in events and their causes Although event histories are ideal for studying the causes of events they typically possess two features censoring and time varying explanatory variables that create major problems for standard statistical procedures Several innovative approaches have been developed to accommodate these two peculiarities of event history data This volume surveys these methods concentrating on the approaches that are most useful to the social sciences In particular Paul D Allison focuses on regression methods in which the occurrence of events is dependent on one or more explanatory variables He gives attention to the statistical models that form the basis of event history analysis and also to practical concerns such as data management cost and useful computer software The Second Edition is part of SAGE's Quantitative Applications in the Social Sciences QASS series which continues to serve countless students instructors and researchers in learning the most cutting edge quantitative techniques

The Association Graph and the Multigraph for Loglinear Models Harry J. Khamis,2011-01-12 This practical guide teaches nonstatisticians how to analyze and interpret loglinear models using the multigraph The Association Graph and the Multigraph for Loglinear Models will help students particularly those studying the analysis of categorical data to develop the ability to evaluate and

unravel even the most complex loglinear models without heavy calculations or statistical software This supplemental text reviews loglinear models explains the association graph and introduces the multigraph to students who may have little prior experience of graphical techniques but have some familiarity with categorical variable modeling The author presents logical step by step techniques from the point of view of the practitioner focusing on how the technique is applied to contingency table data and how the results are interpreted

Ordinal Item Response Theory Wijbrandt H. van Schuur, 2011-05-04 Measurement in the social sciences often refers to standardized answers to close ended questions in which answers are analyzed as if they were measurements on an interval scale This volume presents a measurement model that maintains the ordinal aspects of the data in order to establish how well the model fits and how it measures subjects and items It relaxes the most stringent assumptions from parametric item response theory while maintaining its advantages over classical measurement methods such as reliability and factor analysis This volume is less technical than other books on the topic and is ideal for introductory courses in social science measurement

Multiple Correspondence Analysis Brigitte Le Roux, Henry Rouanet, 2010 Requiring no prior knowledge of correspondence analysis this text provides a nontechnical introduction to Multiple Correspondence Analysis MCA as a method in its own right The authors Brigitte Le Roux and Henry Rouanet present the material in a practical manner keeping the needs of researchers foremost in mind This supplementary text is inappropriate for any graduate level intermediate or advanced statistics course across the social and behavioral sciences as well as for individual researchers Book Jacket

An Introduction to Exponential Random Graph Modeling Jenine K. Harris, 2013-12-23 This volume introduces the basic concepts of Exponential Random Graph Modeling ERGM gives examples of why it is used and shows the reader how to conduct basic ERGM analyses in their own research ERGM is a statistical approach to modeling social network structure that goes beyond the descriptive methods conventionally used in social network analysis Although it was developed to handle the inherent non independence of network data the results of ERGM are interpreted in similar ways to logistic regression making this a very useful method for examining social systems Recent advances in statistical software have helped make ERGM accessible to social scientists but a concise guide to using ERGM has been lacking This book fills that gap by using examples from public health and walking the reader through the process of ERGM model building using R statistical software and the statnet package An Introduction to Exponential Random Graph Modeling is a part of SAGE's Quantitative Applications in the Social Sciences QASS series which has helped countless students instructors and researchers learn cutting edge quantitative techniques
