A Mathematician Reads The Newspaper:

A Mathematician Reads The Newspaper John Allen Paulos, 1995-04-06 Employing the same fun filled user friendly and quirkily insightful approach that put *Innumeracy* on best seller lists Paulos now leads us through the pages of the daily newspaper revealing the hidden mathematical angles of countless articles From the Senate the SATs and sex to crime celebrities and cults Paulos takes stories that may not seem to involve mathematics at all and demonstrates how mathematical naivete can put readers at a distinct disadvantage Whether he s using chaos theory to puncture economic and environmental predictions applying logic and self reference to clarify the hazards of spin doctoring and news compression or employing arithmetic and common sense to give us a novel perspective on greed and relationships Paulos never fails to entertain and enlighten

A Mathematician Reads the Newspaper John Allen Paulos, 1996 Examines the mathematical perspective of societal violence offering insight into the probability and randomness associated with any given scenario

Christ, 2013-11-05 This volume moves through the steps of developing an assessment plan establishing student learning outcomes in the various areas of the curriculum measuring these outcomes For faculty administrators preparing for accreditation

Hold the Press John Maxwell Hamilton, George A. Krinsky, 1996-05-01 Long ago dubbed the fourth branch of government the American press remains to most of the general public an inscrutable enterprise whose influence and behavior are alternately welcomed and maligned yet the proper functioning of a democracy depends upon a media literate populace to act as the ultimate watchdog With wit and authority John Hamilton and George Krinsky lead readers through the whirl of print journalism They offer a curiosity satisfying blend of explanation and interpretation history anecdotes aplenty and statistical analysis to show what s wrong and what works with today s newspapers

Interdisciplinary Educational Research In Mathematics and Its Connections to The Arts and Sciences Bharath Sriraman, Claus Michelsen, Astrid Beckmann, Viktor Freiman, 2008-09-01 The book is based on the recently held Symposium on mathematics and its connections to the arts and sciences namely the second Mathematics and its Connections to the Arts and Sciences MACAS2 Symposium in Odense Denmark May 29 31 2007 The chapters are an eclectic collection of interdisciplinary research initiatives undertaken by mathematics educators with implications for practitioners concerned with teaching and learning processes The papers cover a wide genre of research domains within mathematics education cognition modelling problem solving teacher education ethnomathematics mathematical statistical literacy curricular and technological initiatives and research related to science education The major interdisciplinary themes of the papers in this book are 1 How can modelling activities be used to foster interdisciplinary projects in the school and university setting 2 How can the intricate connections between mathematics and physics be used to design and research interdisciplinary activities in schools

and the university 3 How can research within the ethnomathematics domain of mathematics education be linked to critical mathematics education and interdisciplinary projects involving mathematics art and culture 4 How can the push for mathematical and statistical literacy be connected to other subjects in the school curricula and emphasized via interdisciplinary activities 5 What are concrete examples of classroom experiments with empirical data that demonstrate new and unusual connections relations between mathematics arts and the sciences with implications for pedagogy 6 What is the role of technology and new ICT interfaces in linking communities of learners in interdisciplinary activities involving problem solving The book is an important contribution to the literature on educational initiatives in interdisciplinary education increasing vital for emerging professions of the 21st century *Perspectives on Adults Learning Mathematics* D. Coben,J. O'Donoghue,Gail E. FitzSimons,2006-05-10 At a time when the importance of lifelong education is becoming recognised around the world this is the first book to explore an important but hitherto neglected area adult mathematics education This book is about adults learning mathematics wherever and in whatever circumstances they do so It brings together researchers in the field and aims to lay the foundations for study and further research and practice in this fast developing area It aims to situate research and practice in adults learning mathematics within the wider field of lifelong learning and lifelong education and to be accessible both to the specialist and to the general adult reader The book features a comprehensive review of the field which sets the scene for sections on Perspectives on Research on Adults Learning Mathematics Adults Mathematics Culture and Society Adults Mathematics and Work and Perspectives in Teaching Adults Mathematics Topics covered include mathematics and common sense statistical literacy and numeracy new theories on learning mathematics mathematical competences for the workplace ethnomathematics and the training of tutors **The Power of the Adolescent Brain** Thomas Armstrong,2016-07-14 Moody Reckless Impractical Insecure Distracted These are all words commonly used to describe adolescents But what if we recast these traits in a positive light Teens possess insight passion idealism sensitivity and creativity in abundance all qualities that can make a significant positive contribution to society In this thought provoking book Thomas Armstrong looks at the power and promise of the teenage brain from an empathetic strength based perspective and describes what middle and high school educators can do to make the most of their students potential Thoroughly grounded in current neuroscience research the book explains what we know about how the adolescent brain works and proposes eight essential instructional elements that will help students develop the ability to think make healthy choices regulate their emotions handle social conflict consolidate their identities and learn enough about the world to move into adulthood with dignity and grace Armstrong provides practical strategies and real life examples from schools that illustrate these eight key practices in action In addition you ll find a glossary of brain terms a selection of brain friendly lesson plans across the content areas and a list of resources to support and extend the book s ideas and practices There is a colossal mismatch between how the adolescent brain has evolved over the millennia and the passive rote learning experiences that

are all too common in today's test obsessed educational climate. See the amazing difference in school and beyond when you use the insights from this book to help students tap into the power of their changing brains. Public Affairs Reporting Now George Killenberg, 2012-07-26. Everyday life no matter whether the issues or events arise next door or a continent away raises questions and concerns that the public counts on journalists to answer and more important confront. More than ever before we all rely on the news media for warnings, explanations and insights. The profession and society cannot afford lazy, inept, uncommitted journalists. Today's reporters must learn how to cover public affairs intelligently and thoroughly. First you must learn about the institutions and people who influence the news, understanding how a legislative conference committee functions or how a trial is conducted remain important prerequisites. But it is not enough merely to know how to report. Journalists must also understand how they see, define and influence the news. Don't be fooled by the daily dose of fluffy stories about fads, fashions or fetishes. People love to revel in celebrity gossip or fantasize about extreme makeovers. But Donald Trump's love life or the South Beach Diet don't satisfy when people worry about a home invasion in their neighborhood or a rezoning proposal to bring a Wal Mart super center to town or a Department of Education report that their child's school scored bottom most in reading achievement. Public Affairs Reporting Now is intended to teach you the best practices and give you the best advice for covering what's generically known as public affairs reporting. It's a term that's neither inspiring nor precise but it's long been a convenient way of describing the kind of news coverage that keeps people informed as citizens and keeps our institutions public and private focused on the public good. Mass Communications Research Resources Christopher H. Sterling, James K. Bracken, Susan B. Hill, 2016-05-06. This reference book is designed as a road map for researchers who need to find specific information about American mass communication as expeditiously as possible. Taking a topical approach it integrates publications and organizations into subject focused chapters for easy user reference. The editors define mass communication to include print journalism and electronic media and the processes by which they communicate messages to their audiences. Included are newspaper, magazine, radio, television, cable and newer electronic media industries. Within that definition this volume offers an indexed inventory of more than 1,400 resources on most aspects of American mass communication: history, technology, economics, content, audience, research, policy and regulation. The material featured represents the carefully considered judgment of three experts, two of them librarians plus four contributors from different industry venues. The primary focus is on the domestic American print and electronic media industries. Although there is no claim to a complete census of all materials on print journalism and electronic media, what is available is now too vast for any single guide; the most important and useful items are here. The emphasis is on material published since 1980 though useful older resources are included as well. Each chapter is designed to stand alone providing the most important and useful resources of a primary nature: organizations and documents as well as secondary books and reports. In addition, online resources and internet citations are included where possible. **ENC Focus**, 2000 **Regret the**

Error Craig Silverman, 2009 Winner of the National Press Club's Arthur Rowse Award for Press Criticism From Craig Silverman proprietor of www.RegretTheError.com comes a lively journey through the history of media mistakes via a chronicle of funny shocking and often disturbing journalistic slip ups The errors running the gamut from hilarious to tragic include Fuzzy Numbers when numbers and math undermine reporting Obiticide printing the obituary of a living person and Unintended Consequences typos and misidentifications that create a new incorrect reality While some of the errors are laugh out loud funny the book also offers a serious investigation of contemporary journalism's lack of accountability to the public and a rousing call to arms for all news organizations to mend their ways and reclaim the role of the press as honest voice of the people

Communicating Uncertainty Sharon M. Friedman, Sharon Dunwoody, Carol L. Rogers, 2012-10-12 Exploring the interactions that swirl around scientific uncertainty and its coverage by the mass media this volume breaks new ground by looking at these issues from three different perspectives that of communication scholars who have studied uncertainty in a number of ways that of science journalists who have covered these issues and that of scientists who have been actively involved in researching uncertain science and talking to reporters about it In particular *Communicating Uncertainty* examines how well the mass media convey to the public the complexities ambiguities and controversies that are part of scientific uncertainty In addition to its new approach to scientific uncertainty and mass media interactions this book distinguishes itself in the quality of work it assembles by some of the best known science communication scholars in the world This volume continues the exploration of interactions between scientists and journalists that the three coeditors first documented in their highly successful volume *Scientists and Journalists Reporting Science as News* which was used for many years as a text in science journalism courses around the world

Statistics and the Quest for Quality Journalism Alessandro Martinisi, Jairo Alfonso Lugo-Ocando, 2020-10-29 This book looks at how numbers and statistics have been used to underpin quality in news reporting In doing so the aim is to challenge some common assumptions about how journalists engage and use statistics in their quest for quality news It seeks to improve our understanding about the usage of data and statistics as a primary means for the construction of social reality This is a task in our view that is urgent in times of post truth politics and the rise of fake news In this sense the quest to produce quality news which seems to require incorporating statistics and engaging with data as laudable and straightforward as it sounds is instead far more problematic and complex than what is often accounted for
