A Life In Error A Life In Error:

A Life in Error Professor James Reason, 2013-11-01 This succinct but absorbing book covers the main way stations on James Reason's 40 year journey in pursuit of the nature and varieties of human error. He presents an engrossing and very personal perspective offering the reader exceptional insights, wisdom and wit as only James Reason can. *A Life in Error* charts the development of his seminal and hugely influential work from its original focus on individual cognitive psychology through the broadening of scope to embrace social, organizational and systemic issues.

Beyond Six Billion National Research Council, Commission on Behavioral and Social Sciences and Education, Committee on Population, Panel on Population Projections, 2000-09-11

Is rapid world population growth actually coming to an end? As population growth and its consequences have become front page issues, projections of slowing growth from such institutions as the United Nations and the World Bank have been called into question. *Beyond Six Billion* asks what such projections really say, why they say it, whether they can be trusted and whether they can be improved. The book includes analysis of how well past U.N. and World Bank projections have panned out, what errors have occurred and why they have happened. Focusing on fertility as one key to accurate projections, the committee examines the transition from high constant fertility to low fertility levels and discusses whether developing countries will eventually attain the very low levels of births now observed in the industrialized world. Other keys to accurate projections: predictions of lengthening life span and of the impact of international migration on specific countries are also explored in detail. How good are our methods of population forecasting? How can we cope with the inevitable uncertainty? What population trends can we anticipate? *Beyond Six Billion* illuminates not only the forces that shape population growth but also the accuracy of the methods we use to quantify these forces and the uncertainty surrounding projections. The Committee on Population was established by the National Academy of Sciences (NAS) in 1983 to bring the knowledge and methods of the population sciences to bear on major issues of science and public policy. The committee's work includes both basic studies of fertility, health and mortality and migration and applied studies aimed at improving programs for the public health and welfare in the United States and in developing countries. The committee also fosters communication among researchers in different disciplines and countries and policy makers in government, international agencies and private organizations. The work of the committee is made possible by funding from several government agencies and private foundations.

Pathological Georges Canguilhem, 2012-12-06 by MICHEL FOUCAULT Everyone knows that in France there are few logicians but many historians of science and that in the philosophical establishment whether teaching or research oriented they have occupied a considerable position But do we know precisely the importance that in the course of these past fifteen or twenty years up to the very frontiers of the establishment a work like that of Georges Canguilhem can have had for those very people who were separated from or challenged the establishment Yes I know there have been noisier theatres psychoanalysis Marxism linguistics ethnology But let us not forget this fact which depends as you will on the sociology of French intellectual environments the functioning of our university institutions or our system of cultural values in all the political or scientific discussions of these strange sixty years past the role of the philosophers I simply mean those who had received their university training in philosophy department has been important perhaps too important for the liking of certain people And directly or indirectly all or almost all these philosophers have had to come to terms with the teaching and books of Georges Canguilhem From this a paradox this man whose work is austere intentionally and carefully limited to a particular domain in the history of science which in any case does not pass for a spectacular discipline has somehow found himself present in discussions where he himself took care never to figure
