The Meaning of Relativity Albert Einstein, James Zimmerhoff, 2017-06-19 Albert Einstein born 14 March 1879 and died 18 April 1955 was a German born theoretical physicist He produced the theory of relativity one of the two pillars of contemporary physics alongside quantum mechanics Einstein's work is also known for its impact on the philosophy of science Einstein is best recognized by the people for his mass energy equivalence formula $E = mc^2$ which has been called the world's most famous equation Albert earned the 1921 Nobel Prize in Physics for his work on theoretical physics and particularly for his identification of the law of the photoelectric effect a crucial step in the unfolding of quantum theory At the beginning of his career Einstein reasoned that Newtonian mechanics was no longer sufficient to harmonize the laws of classical mechanics with the ones of the electromagnetic field This conclusion led him to formulate his special theory of relativity while working at the Swiss Patent Office in Bern 1902-1909 Switzerland He recognized however that the principle of relativity could also encompass the gravitational fields resulting in his consequent theory of gravitation in 1916 he wrote a paper on general relativity Einstein continued to deal with dilemmas of statistical mechanics and quantum theory that led to his explanations of particle theory and the movement of molecules He also examined the thermal properties of light that laid the grounds for the photon theory of light In 1917 Albert applied the general theory of relativity to model the large scale structure of the universe Between 1895 and 1914 while he lived in Switzerland except for one year in Prague

1911-12 where he earned his academic diploma from the Swiss Federal Polytechnic in Zurich in 1900. He later stays to teach there at the same institute as a professor of theoretical physics between 1912 and 1914, then he left for Berlin. In 1901, after being stateless for more than five years, Albert acquired Swiss citizenship which he kept for the rest of his life. In 1905, Albert was awarded a Ph.D. from the University of Zurich. The same year, his *annus mirabilis* (miracle year) during which he published four groundbreaking papers which brought him to the eyes of the academic world at only the age of 26. Einstein was visiting the United States when Adolf Hitler came to power in 1933 and, being from Jewish descent, did not return to Germany where he was a professor at the Berlin Academy of Sciences. Albert settled in the United States, becoming an American citizen in 1940. On the eve of World War II, he endorsed a letter to President Franklin D. Roosevelt informing him of the potential development of potent bombs of a new type and urging that the U.S. begin comparable research, which led to the Manhattan Project. Albert supported defending the Allied forces but denounced the idea of using the discovered nuclear fission as a weapon. Next, together with the British philosopher Bertrand Russell, he signed the Russell-Einstein Manifesto, highlighting the danger of nuclear weapons. Albert was a member of the Institute for Advanced Study in Princeton, New Jersey, until his death in 1955. Einstein wrote 300+ scientific papers and more than 150 non-scientific works. Albert's intellectual achievements and originality have made the word Einstein synonymous with genius.

The Meaning of Relativity Albert Einstein, 2014-10-26. In 1921, five years after the appearance of his comprehensive paper on general relativity and twelve years before he left Europe permanently to join the Institute for Advanced Study, Albert Einstein visited Princeton University where he delivered the Lowell Lectures for that year. These four lectures constituted an overview of his then controversial theory of relativity. Princeton University Press made the lectures available under the title *The Meaning of Relativity*, the first book by Einstein to be produced by an American publisher. As subsequent editions were brought out by the Press, Einstein included new material amplifying the theory. A revised version of the appendix *Relativistic Theory of the Non-Symmetric Field*, added to the posthumous edition of 1956, was Einstein's last scientific paper.

The Formative Years of Relativity Hanoch Gutfreund, Jürgen Renn, 2017-09-26. First published in 1922 and based on lectures delivered in May 1921, Albert Einstein's *The Meaning of Relativity* offered an overview and explanation of the then new and controversial theory of relativity. The work would go on to become a monumental classic, printed in numerous editions and translations worldwide. Now *The Formative Years of Relativity* introduces Einstein's masterpiece to new audiences. This beautiful volume contains Einstein's insightful text accompanied by important historical materials and commentary looking at the origins and development of general relativity. Hanoch Gutfreund and Jürgen Renn provide fresh, original perspectives, placing Einstein's achievements into a broader context for all readers. In this book, Gutfreund and Renn tell the rich story behind the early reception, spread, and consequences of Einstein's ideas during the formative years of general relativity in the late 1910s and 1920s. They show that relativity's meaning changed radically throughout the nascent years of its development and they

describe in detail the transformation of Einstein's work from the esoteric pursuit of one individual communicating with a handful of colleagues into the preoccupation of a growing community of physicists, astronomers, mathematicians, and philosophers. This handsome edition quotes extensively from Einstein's correspondence and reproduces historical documents such as newspaper articles and letters. Inserts are featured in the main text giving concise explanations of basic concepts and short biographical notes and photographs of some of Einstein's contemporaries are included. The first ever English translations of two of Einstein's popular Princeton lectures are featured at the book's end.

[How Einstein Created Relativity out of Physics and Astronomy](#) David Topper, 2012-09-27 This book tracks the history of the theory of relativity through Einstein's life with in depth studies of its background as built upon by ideas from earlier scientists The focus points of Einstein's theory of relativity include its development throughout his life the origins of his ideas and his indebtedness to the earlier works of Galileo Newton Faraday Mach and others the application of the theory to the birth of modern cosmology and his quest for a unified field theory Treading a fine line between the popular and technical but not shying away from the occasional equation this book explains the entire range of relativity and weaves an up to date biography of Einstein throughout The result is an explanation of the world of relativity based on an extensive journey into earlier physics and a simultaneous voyage into the mind of Einstein written for the curious and intelligent reader

The Infinite Universe of Einstein and Newton Barry Bruce, 2003 After developing his Law of Gravitation Newton came to believe that the Universe was infinite and homogeneous on a large scale Einstein's original intuition was similar to Newton's in that he thought our

Universe was static infinite isotropic and homogeneous The field equations of Einstein's general relativity are solved for this universe One of the three solutions found the infinite closed universe traps light within a finite portion of the universe This infinite closed universe model is shown to fit all the data of the Hubble diagram better than the Big Bang and it fits the recent supernova data without having to postulate mysterious dark energy Using general relativity and the physics which evolved from Newton the author finds the force of gravity between two point particles Utilizing this force and the infinite closed universe model the net force of gravity on a point particle in arbitrary motion due to the uniform mass distribution of the universe is calculated by an integration This net force of gravity is found to be equal to the force of inertia These calculations explain Newton's First Law Newton's Second Law and the equivalence of inertial and gravitational mass In addition by the extension of Einstein's general relativity to two body interactions Newton's Third Law is elicited These results show that the cosmological redshift and the physics that we know are likely the result of the uniform mass distribution of our infinite closed universe and gravity alone

resource for mastering the concepts of general relativity Additional Topics Other interesting scientific topics such as the big bang and many more Calling all physics students curious readers and theoretical science enthusiasts Get ready for an enlightening and captivating cosmic journey with *The Space Time* [The Many Voices of Modern Physics](#) Joseph E. Harmon, Alan G. Gross, 2023-03-07 *The Many Voices of Modern Physics* follows a revolution that began in 1905 when Albert Einstein published papers on special relativity and quantum theory Unlike Newtonian physics this new physics often departs wildly from common sense a radical divorce that presents a unique communicative challenge to physicists when writing for other physicists or for the general public and to journalists and popular science writers as well In their two long careers Joseph Harmon and the late Alan Gross have explored how scientists communicate with each other and with the general public Here they focus not on the history of modern physics but on its communication In their survey of physics communications and related persuasive practices they move from peak to peak of scientific achievement recalling how physicists use the communicative tools available in particular thought experiments analogies visuals and equations to convince others that what they say is not only true but significant that it must be incorporated into the body of scientific and general knowledge Each chapter includes a chorus of voices from the many celebrated physicists who devoted considerable time and ingenuity to communicating their discoveries to the science journalists who made those discoveries accessible to the public and even to philosophers sociologists historians an opera composer and a patent lawyer With their final collaboration Harmon and Gross offer a tribute to the communicative practices of the physicists who convinced their peers and the general public that the universe is a far more bizarre and interesting place than their nineteenth century predecessors imagined *The Einstein Illusion* Samuel Louis Dael, **The Meaning of Relativity** Albert Einstein, Edwin Adams, 2014-12-10 The theory of relativity is intimately connected with the theory of space and time I shall therefore begin with a brief investigation of the origin of our ideas of space and time although in doing so I know that I introduce a controversial subject The object of all science whether natural science or psychology is to co ordinate our experiences and to bring them into a logical system How are our customary ideas of space and time related to the character of our experiences The experiences of an individual appear to us arranged in a series of events in this series the single events which we remember appear to be ordered according to the criterion of earlier and later which cannot be analysed further There exists therefore for the individual an I time or subjective time This in itself is not measurable I can indeed associate numbers with the events in such a way that a greater number is associated with the later event than with an earlier one but the nature of this association may be quite arbitrary This association I can define by means of a clock by comparing the order of events furnished by the clock with the order of the given series of events We understand by a clock something which provides a series of events which can be counted and which has other properties of which we shall speak later By the aid of speech different individuals can to a certain extent compare their experiences In this way it is shown that certain sense perceptions

of different individuals correspond to each other while for other sense perceptions no such correspondence can be established We are accustomed to regard as real those sense perceptions which are common to different individuals and which therefore are in a measure impersonal The natural sciences and in particular the most fundamental of them physics deal with such sense perceptions The conception of physical bodies in particular of rigid bodies is a relatively constant complex of such sense perceptions A clock is also a body or a system in the same sense with the additional property that the series of events which it counts is formed of elements all of which can be regarded as equal The only justification for our concepts and system of concepts is that they serve to represent the complex of our experiences beyond this they have no legitimacy I am convinced that the philosophers have had a harmful effect upon the progress of scientific thinking in removing certain fundamental concepts from the domain of empiricism where they are under our control to the intangible heights of the a priori For even if it should appear that the universe of ideas cannot be deduced from experience by logical means but is in a sense a creation of the human mind without which no science is possible nevertheless this universe of ideas is just as little independent of the nature of our experiences as clothes are of the form of the human body SPACE AND TIME IN PRE RELATIVITY PHYSICS This is particularly true of our concepts of time and space which physicists have been obliged by the facts to bring down from the Olympus of the a priori in order to adjust them and put them in a serviceable condition
