fibers plastics and other products have flowed out of the chemical industry and into the consumer economies war machines farms and medical practices of industrial societies The German chemical industry has been a major site for the development and application of the science based technologies that gave rise to these products and has had an important role as exemplar stimulus and competitor in the international chemical industry This volume explores the German chemical industry s scientific and technological dimension its international connections and its development after 1945 The authors relate scientific and technological change in the industry to evolving German political and economic circumstances including two world wars the rise and fall of National Socialism the post war division of Germany and the emergence of a global economy This book will be of interest to historians of modern Germany to historians of science and technology and to business and economic historians

**The Chemical Industry in Europe, 1850-1914** Ernst Homburg,Anthony S. Travis,Harm G. Schröter,2013-03-14 Europe is the cradle of the modern international chemical industry From the middle of the nineteenth century until the outbreak of World War I the European chemical industry influenced not only the production and control of science and technology but also made significant contributions towards economic development as well as bringing about profound changes in working and living environments It is a highly complex heritage both rich and threatening that calls for close scrutiny Fortunately a unique opportunity to explore the historical development of the European chemical industry from a variety of novel standpoints was made possible during 1993 as part of the European Science Foundation ESF programme called The Evolution of Chemistry in Europe 1789 1939 This process of exploration has taken place through three workshops each dealing with different time periods The workshop concerned with the period 1850 1914 which corresponds roughly to the so called Second Industrial Revolution was held in Maastricht The Netherlands on 23 25 March 1995 This volume is the outcome of that workshop The other workshops dealing with European chemical industry were held in Liege in 1994 covering the First Industrial Revolution period 1789 1850 and Strasbourg in 1996 covering the period between the two World Wars

*The Bioeconomy* Nicolas Befort,2023-03-22 The bioeconomy is steadily becoming more important in regional national and European public policies As it encompasses the transformation of agricultural marine and organic resources into food feed fuels energy and materials the bioeconomy should become a major new industry outlining the possibility of a post fossil future This book is the first attempt to depict the origins formation and challenges of this new industry in terms of emerging institutions innovation and economic strategies The result of this work is that the substitution of raw materials alone is not enough to get out of the fossil economy This book develops a political economy of the ecological transition which theorizes the transition as a new crisis of capitalism This phase is characterized by stakeholders attempts to develop renewed rationales and strategies to take control of the reorganization of flows of natural resources their outcomes and their evaluation The proposed framework considers recent results in four complementary research strands transition studies institutional economics ecological economics and the evolutionary economics of innovation The book will be of

interest to researchers interested in the development of the bioeconomy and both researchers and students seeking to understand the role of heterodox economics in the ecological transition

**Materials and Expertise in Early Modern Europe** Ursula Klein, Emma C. Spary, 2010-04-15 It is often assumed that natural philosophy was the forerunner of early modern natural sciences But where did these sciences systematic observation and experimentation get their starts In *Materials and Expertise in Early Modern Europe* the laboratories workshops and marketplaces emerge as arenas where hands on experience united with higher learning In an age when chemistry mineralogy geology and botany intersected with mining metallurgy pharmacy and gardening materials were objects that crossed disciplines Here the contributors tell the stories of metals clay gunpowder pigments and foods and thereby demonstrate the innovative practices of technical experts the development of the consumer market and the formation of the observational and experimental sciences in the early modern period *Materials and Expertise in Early Modern Europe* showcases a broad variety of forms of knowledge from ineffable bodily skills and technical competence to articulated know how and connoisseurship from methods of measuring data gathering and classification to analytical and theoretical knowledge By exploring the hybrid expertise involved in the making consumption and promotion of various materials and the fluid boundaries they traversed the book offers an original perspective on important issues in the history of science medicine and technology

*Determinants in the Evolution of the European Chemical Industry, 1900-1939* Anthony S. Travis, Harm G. Schröter, Ernst Homburg, Peter J.T. Morris, 2013-04-17 The editors wish to thank the European Science Foundation for its support of the programme on the Evolution of Chemistry in Europe 1789 1939 as well as for sponsoring the publication of this volume Through the subdivision of this initiative that deals specifically with chemical industry it has been possible for historians of science technology business and economics to share often widely differing viewpoints and develop consensus across disciplinary and cultural boundaries The contents of this volume are based on the third of three workshops that have considered the emergence of the modern European chemical industry prior to 1939 the first held in Liege 1994 the second in Maastricht 1995 and the third in Strasbourg 1996 All contributors and participants are thanked for their participation in often lively and informative debates The generous hospitality of the European Science Foundation and its staff in Strasbourg is gratefully acknowledged

Introduction Emerging chemical knowledge and the development of chemical industry and particularly the interaction between them offer rich fields of study for the historian This is reflected in the contents of the three workshops dealing with the emergence of chemical industry held under the aegis of the European Science Foundation s Evolution of Chemistry in

Europe 1789 1939 programme The first workshop focused mainly on science for industry 1789 1850 and the second on the two way traffic between science and industry 1850 1914 The third workshop dealing with the period 1900 1939 covers similar issues but within different and wider contexts *The Company That Changed Itself* Arjan van Rooij, 2007-10-01 This thoroughly researched book analyses the role of industrial research in DSM's transformations **Nineteenth-Century Attitudes: Men of Science** S. Ross, 2012-12-06 *Advances in Bioprocess Engineering* Enrique Galindo, Octavio R. Ramírez, 2013-06-29 Bioprocess engineering plays a key role in the development and optimization of bioprocesses leading to the products of biotechnology A survey of the state of the art in this field is greatly needed This work covers all the essential sub areas and as such is required reading for scientists active in all the disciplines involved in bioprocess engineering This review of basic and applied approaches is brought together by a broad international group of expert authors The work is a reflection of the First International Symposium on Bioprocess Engineering June 1994 However it must be emphasized that the book cannot be perceived as a regular symposium proceedings volume a strict peer review process assures the readers of a high level of quality more than a quarter of the work consists of invited contributions while less than half of the spontaneously submitted manuscripts were accepted for publication *Advances in Bioprocess Engineering* belongs among the indispensable set of instruments of today's researcher in this field **Twenty-Sixth Symposium on Biotechnology for Fuels and Chemicals** Brian H. Davison, 2007-11-21 State of the art research by leading experts Advanced feedstock production and processing Enzyme and microbial biocatalysis Bioprocess research and development Commercialization of biobased products *Chemical Lectures of H.T. Scheffer* Torbern Bergman, 2012-12-06 Torbern Bergman was one of the greatest chemists of the 18th century He edited this collection of lectures in chemistry by H T Scheffer and published it in 1775 It was probably the first book designed to be used as a textbook for university classes in chemistry Bergman presented the first of his successively improved Tables of Elective Attractions in this book a table of the chemical elements which was one of the earliest attempts to present all the chemical elements and their properties in a single table This table preceded the modern periodic table of the elements by nearly a century It is of basis of this table that Bergman is considered to be the father of physical chemistry One of the many discoveries described in this book is Scheffer's Pelican Experiment which disproved the transmutation of elements and preceded by two decades the identical experiment carried out by Antoine Lavoisier This book will be of interest to historians of science and chemists in particular Scientists in general and educators will also be interested to read this book It can be used as additional reading in history courses **Lactose and Lactose Derivatives** Néstor Gutiérrez-Méndez, 2020-11-11 Lactose is a unique disaccharide found exclusively in the milk of mammals This sugar has a crucial role in nourishing newborn and young mammals however some adults have difficulties in fully metabolizing lactose Despite lactose intolerance in the population the dairy industry produces 400 000 tons of crystalline lactose worldwide The food and pharmaceutical industries use lactose as well as lactose derivatives in a wide variety of

products This book reviews some aspects of lactose properties and synthesis as well as recent advances in the recovery of lactose and lactose derivatives from cheese whey
