Educart, Dr. Rakshita Singh, 2024-07-25 *Educart NEET 37 Years Chemistry Solved Papers (PYQs) Chapterwise and Topicwise for NEET 2025 Exam* Educart, Dr. Rakshita Singh, 2024-07-25 Educart NEET 37 Years Physics Solved Papers (PYQs) Chapterwise and Topicwise for NEET 2025 Exam Educart, Dr. Rakshita Singh, 2024-07-25 Immunotherapeutic and Immunoprophylactic Strategies for Infectious Diseases Giuseppe Andrea Sautto, Roberta Antonia Diotti, 2020-10-28 *The Biologist's Imagination* William R. Hoffman, Leo Furcht, 2014 Discusses the history of technological innovation in the biosciences Systems Biology Approaches to Understanding the Cause and Treatment of Heart, Lung, Blood, and Sleep Disorders Raimond L Winslow, Jennie Larkin, Pankaj Qasba, 2014-11-21 Development of powerful new high throughput technologies for probing the transcriptome proteome and metabolome is driving the rapid acquisition of information on the function of molecular systems The importance of these achievements cannot be understated they have transformed the nature of both biology and medicine Despite this dramatic progress one of the greatest challenges that continues to confront modern biology is to understand how behavior at the level of genome proteome and metabolome determines physiological function at the level of cell tissue and organ in both health and disease Because of the inherent complexity of biological systems the development analysis and validation of integrative computational models based directly on experimental data is necessary to achieve this understanding This approach known as systems biology integrates computational and experimental approaches through iterative development of mathematical models and experimental validation and testing The combination of these approaches allows for a mechanistic understanding of the function of complex biological systems in health and their dysfunction in disease The National Heart Lung and Blood Institute NHLBI has recognized the importance of the systems biology approach for understanding normal physiology and perturbations associated with heart lung blood and sleep diseases and disorders In 2006 NHLBI announced the Exploratory Program in Systems Biology followed in 2010 by the NHLBI Systems Biology Collaborations The goal of these programs is to support collaborative teams of investigators in using experimental and computational strategies to integrate the component parts of biological networks and pathways into computational models that are based firmly on and validated using experimental data These validated models are then applied to gain insights into the mechanisms of altered system function in disease to generate novel hypotheses regarding these mechanisms that can be tested experimentally and to then use the results of experiments to refine the models The purpose of this Research Topic is to present the range of innovative new approaches being developed by investigators working in areas of systems biology that couple experimental and modeling studies to understand the cause and possible treatment of heart lung blood and sleep diseases and disorders This Research Topic will be of great interest to the cardiovascular research community as well as to the general community of systems biologists Contemporary Strategy

Gareth D. Matthews, 2014-10-02 With upwards of 4 5 million deaths worldwide each year and more than one tenth of these occurring in those with no previously documented heart disease sudden arrhythmic death SAD is both a major public health burden and a highly emotive issue for society at large Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD both in the context of hereditary and acquired cardiac disorders Thanks largely to work in genetically modified animals the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice Despite a large body of work in both humans and animals it remains impossible to confidently identify those at high risk of SAD making pre-emptive therapy a challenge What is more with the thankful exception of the implantable cardioverter defibrillators and pharmacological agents in very specific situations there has been depressingly little progress in finding new and effective therapies This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies It brings together original research contributions and review articles from key opinion leaders in the field focusing on the direct clinical implications of the basic science research now and in the future
