

DEBRIEFING (PSYCHOLOGY)

Debriefing refers to the procedure for revealing the true purpose of a psychological study to a research participant at the conclusion of a research session.

RATIONALE

In order to examine authentic behavior, it is sometimes necessary to tell participants that the study is about one subject, when in fact it is about something else. This is called deception. If researchers explained the true purpose of a study, then some participants will act in a way that undermines the study's validity.

THINGS TO PROVIDE

- Clarification of the study's use of deception and revealing its true purpose.
- State that the participant can withdraw their data, without penalty.
- A request asking the participant's permission to use their data.
