

Chapter 8: Biotechnology

Check your understanding 8.1a

- 1 The use of biological materials as tools, that is, the use of living organisms or their products for the benefit of humans.
- 2 cell products, living tissues and whole organisms
- 3 Green biotechnology focuses on developments in agriculture, red biotechnology on medical and pharmaceutical applications, white biotechnology on industrial purposes, and yellow biotechnology on food production

Check your understanding 8.1b

- 1 *Ancient biotechnology* – Evidence of yoghurt making dates to approximately 4000 BC. The Chinese used *Lactobacillus* to ferment milk into a semi-liquid consistency, extending the time over which the milk could be stored and used.

Classical biotechnologies – One of the most famous natural products discovered was an antibacterial product made by the fungus *Penicillium*. The product was discovered in 1928 by English bacteriologist Alexander Fleming. It was later stabilised by Australian pharmacologist and pathologist, Howard Florey, to form the antibiotic known today as penicillin, which is still used for the treatment of bacterial infections. This application revolutionised the treatment of infectious diseases caused by bacteria.

Modern biotechnologies to a large extent involves genetic engineering. Industrial biotechnology is also used to produce environmentally friendly fertilisers and biopesticides, and biodegradable materials made from plants.

2

Area of technology	Uses		Applications	
	Past	Present	Past	Present
Agriculture	Improve quality and yield of food	Insertion of desired genes by genetic engineering to create transgenic species	Domestication of food crops and wild animals	Increased grain yield in wheat
Food production	Addition of microorganisms to food products	Insertion of desired genes by genetic engineering to create transgenic species	The Chinese used <i>Lactobacillus</i> to ferment milk, extending time it could be stored	Increased vitamin content in food, e.g. golden rice
Medicine / pharmaceuticals	Consumption of plant products to treat medical conditions	Gene therapy is a technique based on delivering normal genes that function correctly, to individuals who are lacking a functional copy and as a result suffer from a genetic disorder	Perians and Egyptians eased pain by using the milk of the opium poppy	Scientists have had success with the disorder called severe combined immunodeficiency (SCID). Sufferers are very susceptible to infection, as the mutant gene disrupts the functioning of the B and T cells in their immune systems.
