

Water Cycle

Answer Key

Vocabulary: aquifer, condensation, evaporation, freezing, glacier, melting, phase change, precipitation, reservoir, runoff, transpiration, water cycle

Prior Knowledge Question (Do this BEFORE using the Gizmo.)

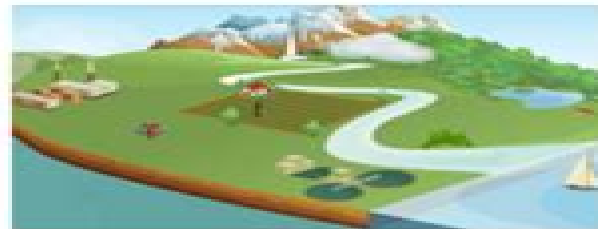

[Note: The purpose of this question is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Question.]

The water that comes out of your faucet at home used to be in the ocean. How did water get from the ocean to your water faucet?

Sample answer: Water in the oceans was evaporated by the Sun, and then the water condensed to form clouds. The clouds moved over land, where they rained. Some of this rain fell into streams and rivers which led to a reservoir. The water was then pumped to my house.

Gizmo Warm-up

Water on Earth is always in motion. These motions form a repeating circuit called the **water cycle**. The Water Cycle Gizmo™ allows you to explore the different paths water takes as it moves from Earth's surface to the atmosphere and back.

1. Click **Oceans**. What percentage of Earth's water is found in the oceans? *97.25%*

2. Click **Atmosphere**. How does the Sun cause water to move from the oceans to the atmosphere?

Ocean water is heated by the Sun, causing it to evaporate into the atmosphere.

3. Click **Clouds**. How do clouds form? *Water vapor in the atmosphere cools and condenses.*

4. Click **Precip (rain)**. ("Precip" is short for **precipitation**, or water falling to Earth's surface.) What causes it to rain? *Rain occurs when water droplets in clouds are large enough to fall.*

5. Click **Oceans** again, and then choose the **PATH** tab. Because it has the same beginning and end, the path is a complete cycle. How many steps does this cycle have? *5 steps*
