

Benefits and Outcomes

KEY QUESTION What is the relationship between science and society?

Science interacts with society, laws, and moral principles. Science also has a big impact on health, medical issues, and environmental issues such as energy and waste disposal.

Science, Ethics, and Morality Science and engineering usually only tell us what is possible or what we *could* do. They do not tell us what we *should* or *should not* do. Applying scientific information involves understanding the role of science in society and its limitations. Science by itself does not include ethical or moral viewpoints.

Avoiding Bias Scientists should be objective, but like everyone else, they have likes, dislikes, and biases. A **bias** is a personal, rather than scientific, view for or against something. Scientists with different personal biases may interpret data in different ways. Bias affects what actions scientists recommend.

Science and Engineering Practices

KEY QUESTION What practices are shared by science and engineering?

Although some of the specifics vary, the steps in scientific inquiry and engineering design are basically the same.

Developing and Using Models Scientists and engineers both use models. Models include diagrams and three-dimensional models, but also include mathematical models and computer simulations. Models help people to visualize and summarize ideas.

Using Mathematics and Computational Thinking Mathematics is important to science and engineering. Ratios, rates, percentages, and unit conversions are some basic ways to analyze data. A mathematical representation can model data and support explanations.

Constructing Explanations and Designing Solutions Scientists attempt to answer questions about the natural world. Scientists then construct explanations that are supported by evidence. Engineers design solutions to problems.

Engaging in Argument From Evidence In science, an argument is a set of reasons that explain why an idea is right or wrong. Scientists must respond thoughtfully to criticisms. Engineers must argue that their design solutions will work and compare them to competing design solutions.

BUILD Vocabulary

Word Origin Bias comes from the French word *bias*, meaning “lean” or “slant.” Therefore, when someone has a bias, he or she point of view is “slanted” in one direction.

| Growth and development | All living things grow; multicellular organisms go through development and differentiation. |
| Need for materials and energy | Organisms need nutrients for energy and materials. |
| Responds to the environment | Organisms respond to external and internal stimuli. |
| Maintaining internal balance | Homeostasis maintains internal conditions. |
| Evolution | As a group, organisms change over time to adapt to changing conditions. |

Lesson Summary
