Handbook of Plant and Crop Stress Mohammad Pessarakli, 2016-04-19 The dynamic and expanding knowledge of environmental stresses and their effects on plants and crops have resulted in the compilation of a large volume of information in the last ten years since the publication of the second edition of the Handbook of Plant and Crop Stress With 90 percent new material and a new organization that reflects this increase **Beneficial Microbes for Sustainable Agriculture under Stress Conditions** Tongmin Sa, 2024-03-19 *Beneficial Microbes for Sustainable Agriculture under Abiotic Stress* Functional Traits and Regulation highlights the potential for microbe mediated stress phytolerance to be improved by presenting multiple scenarios of application and results In most research and studies abiotic stress is applied singularly to specific plants inoculated with a bioinoculum or a bacterial consortium to isolate specific plant microbe responses However in reality plants are continually exposed to a multitude of different stresses simultaneously occurring This book presents bacterial functional traits and bacteria mediated plant responses under both specific or combined stress conditions Collectively it provides insights into bacterial functional traits and bacteria mediated plant responses in a wide range of conditions providing foundational understanding of their potential benefits and inspiring further research The book centers on specific bacterial strains and groups which have been shown to effectively promote stress tolerance and which could be utilized to boost agricultural production under stress conditions Their potential utilization in stress affected lands not just improves crop production but could also be in line with sustainable agriculture With the advancement of tools such as Omics related technologies emerging information on bacterial functional traits and regulations on bacteria mediated phytotolerance will also allow us to develop relevant biotechnologies harnessing potentials of plant bacteria interactions under stress conditions The information in this volume will be of interest to those working toward these next steps Includes microbial functional traits and responses common to all stresses unique to specific stress and shared by multiple stresses Focuses on microbial strains and groups proven to be most effective in promoting stress tolerance Explores opportunities toward improvement of

sustainable agriculture and resulting food security *Principles and Practices in Plant Ecology* Inderjit, K. M. M. Dakshini, Chester L. Foy, 2023-07-21 *Principles and Practices in Plant Ecology* Allelochemical Interactions provides insights and details recent progress about allelochemical research from the ecosystem standpoint Research on chemical ecology of allelochemicals in the last three decades has established this field as a mature science that interrelates the research of biologists weed and crop scientists agronomists natural product chemists microbiologists ecologists soil scientists and plant physiologists and pathologists This book demonstrates how the influence of allelochemicals on the various components of an ecosystem including soil microbial ecology soil nutrients and physical chemical and biological soil factors may affect growth distribution and survival of plant species Internationally renowned experts discuss how a better understanding of allelochemical phenomena can lead to true sustainable agriculture **Reactive Oxygen Species and Oxidative Damage in Plants Under Stress** Dharmendra K. Gupta, José M. Palma, Francisco J. Corpas, 2015-09-07 This book provides detailed and comprehensive information on oxidative damage caused by stresses in plants with especial reference to the metabolism of reactive oxygen species ROS In plants as in all aerobic organisms ROS are common by products formed by the inevitable leakage of electrons onto O₂ from the electron transport activities located in chloroplasts mitochondria peroxisomes and in plasma membranes or as a consequence of various metabolic pathways confined in different cellular loci Environmental stresses such as heat cold drought salinity heavy metal toxicity ozone and ultraviolet radiation as well as pathogens contagion attack lead to enhanced generation of ROS in plants due to disruption of cellular homeostasis ROS play a dual role in plants at low concentrations they act as signaling molecules that facilitate several responses in plant cells including those promoted by biotic and abiotic agents In divergence at high levels they cause damage to cellular constituents triggering oxidative stress In either case small antioxidant molecules and enzymes modulate the action of these ambivalent species

The Methodology of Plant Genetic Manipulation: Criteria for Decision Making Alan C. Cassells, Peter Jones, 2012-12-06 A range of novel techniques is available to the plant breeder today to complement classical breeding methods The new options are based on the integration of advances in plant cell biology with those in plant molecular biology Plant cell tissue and organ cultures provide efficient systems for transformation for the achievement of wide crosses and for the production of variation through spontaneous and induced mutation while permitting effective isolation of desired genotypes by in vitro selection This book presents a critical appraisal of the methodologies of plant genetic manipulation for advanced undergraduates postgraduates researchers and plant breeders and provides guidance on the choice of breeding options The latter depends on the breeding system of the crop the breeding objective and the tissue culture systems applicable to the target genotype s

Role of Antioxidants in Abiotic Stress Management Zaid Ulhassan, Yasir Hamid, Weijun Zhou, 2025-08-01 Role of Antioxidants in Abiotic Stress Management covers the antioxidant defense system in plants providing key insights on how to generate tolerant varieties that can adapt to harsh environmental conditions without adverse impacts on crop productivity

The book covers a broad range of antioxidant responses describing how global climate changes and the overexploitation of natural or anthropogenic resources creates abiotic stressors The potential impacts of factors such as heavy metals metalloids drought water deficit salinity extreme temperatures anoxia and high light intensity are covered along with discussions on how to improve crop growth and development at different stages Written by a team of international experts this book provides an important reference on morphological physiological biochemical metabolic anatomical and molecular responses of plants under stress factors Provides important insights for improved breeding success Highlights management strategies for enzymatic and non enzymatic antioxidant mediated stress tolerance in plants Includes illustrations to clarify and demonstrate key aspects

Redox Homeostasis Managers in Plants under Environmental Stresses Nafees A. Khan, Naser A. Anjum, Adriano Sofo, Rene Kizek, Margarete Baier, 2016-06-30 The production of cellular oxidants such as reactive oxygen species ROS is an inevitable consequence of redox cascades of aerobic metabolism in plants This milieu is further aggravated by a myriad of adverse environmental conditions that plants owing to their sessile life style have to cope with during their life cycle Adverse conditions prevent plants reaching their full genetic potential in terms of growth and productivity mainly as a result of accelerated ROS generation accrued redox imbalances and halted cellular metabolism In order to sustain ROS accrued consequences plants tend to manage a fine homeostasis between the generation and antioxidants mediated metabolisms of ROS and its reaction products Well known for their involvement in the regulation of several non stress related processes redox related components such as proteinaceous thiol members such as thioredoxin glutaredoxin and peroxiredoxin proteins and key soluble redox compounds namely ascorbate AsA and glutathione GSH are also listed as efficient managers of cellular redox homeostasis in plants The management of the cellular redox homeostasis is also contributed by electron carriers and energy metabolism mediators such as non phosphorylated NAD and the phosphorylated NADP coenzyme forms and their redox couples DHA AsA GSSG GSH NAD NADH and NADP NADPH Moreover intracellular concentrations of these cellular redox homeostasis managers in plant cells fluctuate with the external environments and mediate dynamic signaling in plant stress responses This research topic aims to exemplify new information on how redox homeostasis managers are modulated by environmental cues and what potential strategies are useful for improving cellular concentrations of major redox homeostasis managers Additionally it also aims to provide readers detailed updates on specific topics and to highlight so far unexplored aspects in the current context
