Ecotaxation Timothy O'Riordan, 2014-04-23. Ecotaxation covers two distinct ideas. To date it has largely been associated with the polluter pays principle in the form of correctional charges imposed on activities which have a demonstrably damaging effect on the quality of life or the environment. The other involves a more ambitious policy shift aiming to put taxation onto a different basis away from income and labour and onto resource depleting and environmentally damaging activities. By going further and directing the additional revenue towards environmentally supportive and socially improving ends it can be part of the fiscal basis for sustainable development. This volume explores the history of both ideas but with more emphasis on the wider ranging policy alternatives that ecotaxation represents. The contributors look at the mixed records of the correctional economic instruments which have been introduced suggesting that unless they are integrated into a more comprehensive package of reforms they are not likely to have much effect on the direction of an already unsustainable economy. On the other hand, taxation has the potential not only to stimulate sustainable forms of economic activity but also by lowering the costs of work and employment to create jobs and greater social justice. At a time when governments' room for manoeuvre is being more and more restricted by conflicting social, economic and environmental commitments and pressures, revenue neutral ecotaxation has a crucial role to play in reconciling those objectives and putting policy onto a new and lasting footing.

Measuring Sustainability Simon Bell, Stephen Morse, 2013-06-17. Measuring the sustainability of development is crucial to achieving it and is one of the most actively studied issues in the area. To date, most studies of measurements or indicators have been largely theoretical. However, this book follows on to Bell and Morse's highly influential *Sustainability Indicators* 1999, presenting valuable practical advice on how to develop measurements that will work in real life development contexts. It describes and analyses how to derive, validate and apply indicators in the course of an actual development project. In this case, the Mediterranean Action Plan in Malta. The authors explain the trade offs and constraints involved and how it is possible to combine the open ended and flexible perspectives of sustainability with the more linear processes and fixed targets of specific projects through the use of pragmatic and reflective methodologies.
