Building And Structural Construction N5 April 2014:

Sustainability in Structural Concrete Design Jorge de Brito, Rui Vasco Silva, 2024-05-06 Sustainability in construction is a priority for both academia and industry to reduce the carbon footprint of the built environment and thus combat climate change. Numerous approaches have been developed on how to tackle this issue wherein the implementation of eco efficient concrete is currently considered one of the most effective measures to be applied at the beginning of a building's life cycle. This edition of the Structural Engineering Document discusses key issues in selecting and incorporating eco efficient waste materials capable of enhancing the sustainability of structural concrete in construction projects. The cost efficiency of using recycled aggregates in structural concrete is shown by several world renowned researchers. Critical evaluations and case studies further highlight the properties and performance of these materials and in various structural applications. Also novel low impact binding systems using industrial by products showcase the importance of continuous research for technically viable alternatives capable of decreasing the huge dependency on ordinary Portland cement. The purpose of this document is to contribute to a broader understanding of the many possibilities for the development of a more sustainable structural concrete thereby fostering resilient and sustainable construction practices to support the global commitment to environmental responsibility.

Advances in Frontier Research on Engineering Structures Ali Cheshmehzangi, Hüseyin Bilgin, 2023-10-15 Civil architecture and structural engineering may be subjects to which most of us never give a second thought but both these disciplines are crucial to the built environment in which we live and without the skills of those who work in them our buildings and infrastructure would lack the safety and reliability that we all take for granted. This book presents the proceedings of ICCASE 2023 the 7th International Conference on Civil Architecture and Structural Engineering held in Guangzhou China from 14-16 April 2023 as a virtual event and attended by around 250 international participants. The aim of the conference was to discuss recent advances and new perspectives in civil architecture and structural engineering and to gain insight into the current state of the field and future scenarios. A total of 190 submissions were received for the conference of which 78 were accepted for presentation after peer review. These are divided into 4 sections: civil construction and underground structure analysis; underground space and special structure engineering; construction material quality and performance research; and structural seismic design and reinforcement engineering. Topics covered included high rise buildings and large span structures; the monitoring and control of structures; tunnels and underground structures; calculation principles of the seismic design of structures; and seismic isolation technology of structures among others. The book offers a comprehensive overview of civil architecture and structural engineering today and will be of interest to all those working in the field.
