techniques to understand disease spread and ultimately to identify factors preventing or promoting disease. Finally, those factors may be incorporated into advanced quantitative methods and epidemiological models which are used to design and evaluate strategies aimed at preventing, controlling or eliminating disease in the population. Recent years have seen a dramatic increase in the application of science, technology, engineering and mathematical (STEM) tools and approaches intended to enhance such analytical epidemiology processes with the ultimate goal of supporting disease prevention, control and eradication. This eBook comprises a series of research articles that through current state-of-the-art scientific knowledge on the application of STEM tools to the microbiology of infectious diseases demonstrate their usefulness at the various components of an integral epidemiological approach divided into the four large components of a: experimental studies; b) novel diagnostic techniques; c) epidemiological characterization; and d) population modeling and intervention.
