Ecological Studies In Tropical Fish Communities:

Ecological Studies in Tropical Fish Communities R. H. Lowe-McConnell, 1987-03-05 Tropical fish present some of the best examples of how new species evolve and how complex ecological communities are maintained Their study has generated important new ideas on the roles of ecology and behaviour in the evolution of species and communities This book brings together for the first time the results of widely scattered research on fish in tropical rivers lakes and seas research that has been stimulated by the splendid opportunities to observe the behaviour of fish in their natural habitats in the clear warm waters The book opens with an overview of the ecology of tropical freshwater and marine environments and their associated fish faunas and then presents a number of freshwater studies drawn from the African South American Asian and New Guinea tropics Special consideration is given to the new man made lakes which have provided large scale experiments on the change of riverine fish communities to lacustrine ones and to the great lakes of East Africa for examples of recent species evolution

Ecological Studies in Tropical Fish Communities R. H. Lowe-McConnell, 1987-02-27 The result of compiling widely scattered research on fish in tropical rivers lakes and seas A comprehensive overview of the ecology of fish communities in freshwater as well as marine environments

The Fish Community of a Tropical Organically Polluted River W. Lestari, 2004

Advances in Ecological Research, 1995-10-03 This volume contains papers highlighting the diverse interests of modern ecologists All areas of ecology are covered from the current concerns over changes in CO₂ levels and its effects on the Earth's vegetation to the unique Cichlid fish populations in Lake Tanganyika whose structure is important for other organismal populations including humans Other theoretical and applied ecological studies are also discussed making this volume essential for all ecologists

Limnology Robert G. Wetzel, 2001-05-10 Limnology is the study of the structural and functional interrelationships of organisms of inland waters as they are affected by their dynamic physical chemical and biotic environments Limnology Lake and River Ecosystems Third Edition is a new edition of this established classic text The coverage remains rigorous and uncompromising and has been thoroughly reviewed and updated with evolving recent research results and theoretical understanding In addition the author has expanded coverage of lakes to reservoir and river ecosystems in comparative functional analyses

Lateral Asymmetry in Animals Michio Hori, Satoshi Takahashi, 2022-07-23 This book presents the latest research findings on the laterality of fish and other animals It describes all aspects of lateral asymmetry including ecology morphology behaviour dynamics of lefty and righty morphs genetics and evolution through field observations experiments and modeling Lateral asymmetry in scale eating cichlids gives a simple and beautiful example of negative frequency dependent selection

and resulting oscillation of lefty and righty morph frequencies Lateral dimorphism is found not only in scale eaters but in all orders of fish shrimps and cuttlefish Lateral asymmetry interacts between species through cross predation Contrary to fish lateral asymmetry in snails acts as in most cases positive frequency dependent selection and provides deep insights into speciation Especially snakes eating righty snails facilitate speciation of lefty snails As a collaboration work of field ecologists and theoretical biologists this book covers a variety of topics on lateral asymmetry which are consistently related to predation The topics include behavioral ecology population dynamics physiology evolution genetics development learning and neuroscience statistics with the subjects of fish shrimp prawn and crayfish crab cuttlefish and snake and snail Chapters cover new research results such as cuttlefish laterality dynamics interaction between laterality of snails and snakes evolution of laterality genetic system and statistical analysis of laterality oscillation Readers will appreciate the simplicity and beauty of lateral asymmetry and its profound impact on ecology and evolution

Igapó (Black-water flooded forests) of the Amazon Basin Randall W. Myer, 2018-10-22 Igap forests are a common part of the Amazon whose ecosystems are critical to our shared human future The introduction addresses the structure function and dynamics of igap forests in the Amazon basin focusing on their uniqueness due to their high level of complexity defined as the many ways that different components of igap forests in the Amazon basin ecosystem interact and also on how those interactions are on a higher order compared to other tropical forests The text then breaks down the igap ecosystem using these sections 1 Igap forests over space and time 2 Water light and soils 3 The carbon cycle 4 Litter fungi and invertebrates 5 Vertebrates 6 Plant population studies 7 Plant community studies and 8 Human impacts and management Experts from around the world serve as chapter authors that review what is known about their specific part of the igap ecosystem what research they have done and also what needs to be done in the future

Trophic Models of Aquatic Ecosystems Villy Christensen, Daniel Pauly, 1993

Ecology of Australian Freshwater Fishes Keith Walker, Paul Humphries, 2013-04-10 This edited volume reviews our past and present understanding of the ecology of Australian freshwater fishes It compares patterns and processes in Australia with those on other continents discusses the local relevance of ecological models from the northern hemisphere and considers how best to manage our species and their habitats in the face of current and future threats In view of these challenges the need for redress is urgent The chapters are written by some of our foremost researchers and managers developing themes that underpin our knowledge of the ecology conservation and management of fish and fish habitats For each theme the authors formulate a synthesis of what is known consider the need for new perspectives and identify gaps and opportunities for research monitoring and management The themes have an Australian context but draw upon ideas and principles developed by fish biologists in other parts of the world The science of freshwater fish ecology in Australia has grown rapidly from its roots in natural history and taxonomy This book offers an introduction for students researchers and managers one that the authors hope will carry Australian fish biology and resource management to new levels of understanding

Effects of Resource Distribution on Animal

Plant Interactions Mark D. Hunter, Takayuki Ohgushi, Peter W. Price, 2012-12-02 Aimed primarily at advanced graduate students and professional biologists this book explores the degree to which animal-plant interactions are determined by plant and animal variability. Many of the patterns seen in natural communities appear to result from cascading effects up as well as down the trophic system. Variability among primary producers can influence animal and plant population quality and dynamics, community structure and the evolution of animal-plant interactions.

Fish Physiology: The Physiology of Tropical Fishes Adalberto Luis Val, Vera Maria Fonseca de Almeida e Val, David J. Randall, 2005-08-18 The Physiology of Tropical Fishes is the 21st volume of the well known Fish Physiology series and consists of 12 chapters. The purpose of the book is to consolidate and integrate what is known about tropical fishes, marine and freshwater species. The twelve chapters focus on the physiological adaptations acquired during the evolutionary process to cope with warm and shallow hypoxic waters from tropical and neotropical hydrographic basins as well as with the intertidal and coral reef habitats which occur in abundance in tropical seas. The special characteristics of tropical fish fauna will be reviewed in order to explain the tropical fish radiation which gave rise to such extreme fish diversity. This present volume is a voyage through the tropical region reviewing the fish diversity of the main tropical freshwater sheds including the major tropical rivers and lakes, the major dams and marine environments. State of the art information on tropical fish physiology. Written by specialists working in the Tropics. Offers a diverse depiction of the various tropical fishes and the environment where they inhabit. 12 innovative chapters covering a concise view of growth rate, biological rhythms, feeding plasticity, cardio-respiratory design and function, diversity of structure and much more.

Reproductive Biology of Teleost Fishes Robert J. Wootton, Carl

Smith, 2014-12-03 Reproductive Biology of Teleost Fishes is the first integrated review of the reproductive biology of the bony fishes which are the most species rich and diversified group of vertebrates. Teleosts display remarkable variation in their modes of reproduction and this volume is intended to provide a framework for understanding the remarkable reproductive diversity of this group. It describes their reproductive biology using wherever possible phylogenetic analyses and life history theory as a means to interpret the information. The book addresses the genetic, physiological, behavioural, ecological, evolutionary and applied aspects of teleost reproduction in a comparative framework that emphasises the adaptive basis of reproductive diversity. Reproductive Biology of Teleost Fishes provides a comprehensive synthesis of fish reproduction that will be of great interest to life scientists, particularly ecologists, evolutionary biologists, physiologists and advanced undergraduates, postgraduates and research workers requiring a comprehensive overview of fish reproduction. The book is suitable for courses in fish biology and ecology, reproductive physiology and reproductive genetics. It also addresses applied questions and will be of value for courses on fisheries science and aquaculture. Libraries in all universities and research establishments where biological sciences, fisheries science and aquaculture are studied and taught should have several
