

Areal and Satellite measurement of gravity

1) Define Gravity. Write down about the Newton's law of Gravitational force.

Answer:

Gravity:

Gravity is a force of attraction that exists between any two masses, any two bodies, any two particles. Gravity is not just the attraction between objects and the Earth. It is an attraction that exists between all objects, everywhere in the universe.

The law of Gravitational force:

Sir Isaac Newton (1642 -- 1727) discovered that a force is required to change the speed or direction of movement of an object. He also realized that the force called "gravity" must make an apple fall from a tree, or humans and animals live on the surface of our spinning planet without being flung off. Furthermore, he deduced that gravity forces exist between all objects.

Newton's "law" of gravity is a mathematical description of the way bodies are observed to attract one another, based on many scientific experiments and observations. The gravitational equation says that the force of gravity is proportional to the product of the two masses (m_1 and m_2), and inversely proportional to the square of the distance (r) between their centers of mass. Mathematically speaking,

$$F = G \frac{m_1 m_2}{r^2}$$

where G is called the Gravitational Constant. It has a value of $6.6726 \times 10^{-11} \text{ m}^3 \text{ kg}^{-1} \text{ s}^{-2}$.

The effect of gravity extends from each object out into space in all directions, and for an infinite distance. However, the strength of the gravitational force reduces quickly with distance. Humans are never aware of the Sun's gravity pulling them, because the pull is so small at the distance between the Earth and Sun. Yet, it is the Sun's gravity that keeps the Earth in its orbit! Neither are we aware of the pull of lunar gravity on our bodies, but the Moon's gravity is responsible for the ocean tides on Earth.

Cstephenmurray Answer Gravity:

Action Gravity Jeff Lee, 2021-02-09 The Cause of Gravity The Holy Grail of all Scientific Revelation For over four centuries now Natural Philosophers and Theoretical Physicists have been desperately searching for the answer to that elusive and intractable question that is still hanging around today What is the true cause of Gravity The present day view by Theoretical Physics Academia is that gravity can be described as curved or warped space or spacetime So how does this space or spacetime curve or warp Do certain particles of space get closer together in one vicinity of space and further apart in another Are there compressions and rarefactions in space like there are in air How can empty space form a path for a moving object to travel through if it is completely empty The answer is that Space is NOT empty According to a brand new type of physics called Reality Physics we now know that space is not empty but contains an active plenum structure that is continually being created by the active two dimensional outward motion of Time with Space What this actually means is that the Now Point in Time expands outward into space with an active two dimensional omnidirectional omnipositional displacement at the Speed of Light or c 299 792 458 meters per second and that it also forms an inertial reference background pressure density throughout the universe We find that by placing a body of mass into this active inertial reference background pressure density we can create a vicinity of less active pressure density at that location where the mass is located This would obviously cause the greater pressure density surrounding the mass to implode with an accelerating motion down towards the surface of the mass body where the pressure density is less We call this implosively accelerating motion of the inertial reference background Gravitational Acceleration and this is what actually causes small objects to fall to the ground at the surface of the large body of mass Gravity is an action not a curvature or warpage of anything and therefore it must be caused by an action as revealed here by ACTION GRAVITY of Reality Physics

The Grip of Gravity Prabhakar Gondhalekar, 2001-08-23 Gravity is one of the most inexplicable forces of nature controlling everything from the expansion of the Universe to the ebb and flow of ocean tides The search for the laws of motion and gravitation began more than two thousand years ago a quest that Prabhakar Gondhalekar recounts in The Grip of Gravity Beginning with Aristotle and concluding with Planck Gondhalekar outlines a genealogy of gravity and lucidly explains how previous explanations have

shaped the most recent development in the field string theory In this work physicist and astronomer Gondhalekar describes experiments both planned and proposed and clearly explains natural phenomena like ocean tides seasons ice ages the formation of planets stars and exotic objects like black holes and neutron stars which are all controlled by gravity Including anecdotes and thumb nail sketches of the personalities involved The Grip of Gravity provides an introduction to the foundation of modern physics and shows how the current developments in string theory may lead to a new and radical interpretation of gravity Prabhakar Gondhalekar is an Honorary Fellow in the Department of Physics and Astronomy University College London Until his retirement in 1998 he was the head of the Space Astronomy Group at the Rutherford Appleton Laboratory where he had been a researcher for 18 years His research has included a number of topics in galactic and extragalactic astronomy with his major work focusing on the interstellar medium and active galactic nuclei Gondhalekar has been awarded Royal Society Leverhulme Trust and NATO Research Fellowships to do research in universities in the United States and Israel

Introduction to Gravity Strings Mark Fennell, 2015-05-29 For the first time in history the physical nature of gravity is truly understood For centuries people have asked what exactly is gravity Today we have an answer This elegant and simple model will be presented in this book All concepts are explained in simple language with intuitive analogies and several illustrations This model has been taught successfully to high school students and adults from various nations as well as many other curious individuals Gravity has been measured and calculated but to state what gravity is as a physical entity has perplexed scientists for generations Until now For the first time anywhere you will read the solutions regarding the true nature of gravity In this book we explain the physical properties and physical processes of gravity These physical descriptions work for all situations involving gravity without any limits It is also very easy to understand and very easy to use This model is more than just a useful tool it is in fact the very real very physical entity which is gravity This understanding of gravity will become the foundation for all studies related to gravity in the future The Gravity Strings model can explain all aspects of gravity and do things which no other model of gravity can do Some of these include

- 1 The Gravity Strings Model can explain all known characteristics of gravity These characteristics include gravitational effects over long distances weakest of known energies correlation between mass and gravitational energy mechanism of mutual gravitational pull potential versus kinetic gravitational energy rate of gravitational pull and the cause of gravitational acceleration
- 2 The Gravity Strings Model works at all scales from quantum to galaxies No other model of gravity can claim this
- 3 The Gravity Strings Model has been tested in numerous situations involving gravity and has proved 100% successful in every situation
- 4 The Gravity Strings Model can explain all measurements and calculations of gravity in any location
