Holding Schools Accountable Helen Ladd, 2011-01-01 Perhaps the most urgent and complex task facing American education today is to figure out how to hold schools accountable for improved academic achievement In this important new work Helen Ladd and her colleagues describe the options available to policymakers weigh their respective strengths and pitfalls and lay out principles for creating schools where learning is the number one objective This book should be at the top of the reading list for anyone seriously interested in transforming the quality of American schools Edward B Fiske Former Education Editor The New York Times A central theme of current efforts to reform elementary and secondary education in the United States is a more explicit focus on the outcomes of the educational system This volume examines efforts throughout the country to hold schools accountable for the academic performance of their students Researchers from various disciplines most notably economics educational policy and management and political science address a range of questions related to performance based strategies for reforming education The authors describe and evaluate programs that recognize and reward the most effective schools discuss the costs of achieving high performance summarize what is known about parental choice as an accountability mechanism and provide new evidence on the relationship between school inputs and educational outcomes Grounded in the actual

experiences of various states and school districts the book provides a wealth of new information and provocative insights Contributors argue that programs to hold schools accountable for student performance must be carefully designed to assure that schools are treated fairly that vouchers if used should be directed toward low income families that resources do indeed matter poor school districts may well require additional funding to increase student learning In addition to the editor the contributors include Charles T Clotfelter David K Cohen Richard F Elmore Ronald F Ferguson Susan H Fuhrman Eric A Hanushek Caroline Minter Hoxby Richard J Murnane John F Witte and John McHenry Yinger *Inventory of the New York Longitudinal Study*, 1983

Senk,Denisse R. Thompson,2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are

*No Child Left Behind?* Paul E. Peterson,Martin R. West,2003-11-18 The 2002 No Child Left Behind Act is the most important legislation in American education since the 1960s The law requires states to put into place a set of standards together with a comprehensive testing plan designed to ensure these standards are met Students at schools that fail to meet those standards may leave for other schools and schools not progressing adequately become subject to reorganization The significance of the law lies less with federal dollar contributions than with the direction it gives to federal state and local school spending It helps codify the movement toward common standards and school accountability Yet NCLB will not transform American schools overnight The first scholarly assessment of the new legislation No Child Left Behind breaks new ground in the ongoing debate over accountability Contributors examine the law s origins the political and social forces that gave it shape the potential issues that will surface with its implementation and finally the law s likely consequences for American education      Handbook of the Sociology of Education in the 21st Century Barbara Schneider,2018-10-10 This handbook unifies access and opportunity two key concepts of sociology of education throughout its 25 chapters It explores today s populations rarely noticed such as undocumented students first generation college students and LGBTQs and emphasizing the intersectionality of gender race ethnicity and social class Sociologists often center their work on the sources and consequences of inequality This handbook while reviewing many of these explanations takes a different approach concentrating instead on what needs to be accomplished to reduce inequality A special section is devoted to new methodological work for studying social systems including network analyses and school and teacher effects Additionally the book explores the changing landscape of higher education institutions their respective populations and how labor market opportunities are enhanced or impeded by differing postsecondary education pathways Written by leading sociologists and rising stars in the field each of the chapters is embedded in theory but contemporary and futuristic in its implications This Handbook serves as a blueprint for identifying new work for sociologists of education and other scholars and policymakers trying to understand many of the problems of inequality in education and what is needed to address them      Handbook of Structural Equation Modeling Rick H. Hoyle,2014-01-01 The first comprehensive structural equation modeling SEM handbook this accessible volume presents both the mechanics of SEM and specific SEM strategies and applications The editor contributors and editorial advisory board are leading methodologists who have organized the book to move from
