- 1 I love the commercials Sony made to advertise the Bravia television – they did quite a few of them at the time. My favourite one is the paint one, because it's so colourful. The advert starts with a shot of an old tower block in a fairly bleak-looking housing estate. During the advert, the tower block gets painted, but not in the way you might expect. What they do is to have the paint exploding like fireworks, so that there are big splashes of colour all over the screen. The explosions are timed to coincide with the music, which is a stirring classical piece – it's really well done. The only person in the ad is a clown, but I'm not really sure what he's there for.
- 2 My favourite ad is the Darth Vader one – do you know the one I mean? This little boy is dressed up as Darth Vader from Star Wars, and he goes around his house trying to make things move. First he tries his mother's exercise bike, but that doesn't work, so he tries the dog, the washing machine and even a doll in his sister's room, all without success. Then his dad arrives home in his VW Passat and the boy tries his luck with the car. To his delight, he manages to start the car. Of course, it's his dad who has done this from the kitchen with the remote control, but the boy doesn't know that. I just love the way he jumps back in surprise when the headlights come on.
- 3 I think one of the best adverts I've ever seen is the one for the game *Clash of Clans*. It features the actor Liam Neeson and he's in a café, waiting for some doughnuts and playing the game. When he loses, he starts threatening his virtual opponent like he does in one of his films – *Taken*, I think it's called. In the film, Liam Neeson's daughter is kidnapped and at one point, he's talking to the kidnapper on the phone: 'I will find you and I will kill you,' he says. Anyway, in the ad, he uses similar words spoken with the same kind of voice – it's really quite scary. The server in the café thinks so, anyway, especially when Liam corrects him for getting his name wrong.
- 4 This one's an advert for my favourite chocolate: Terry's Chocolate Orange. I don't know if you've ever seen one of these, but it's a big orange made out of pieces of chocolate and you have to hit it to make the pieces come apart. Anyway, back to the advert. It starts in an office, and one of the employees breaks the chocolate orange open with her phone. Next we see a man breaking an orange with one of his wife's new shoes, and a little boy opening one with a toy hammer. Then we see a boyfriend and girlfriend sitting on the sofa waiting for the girl's mother to bring in the tea. Just as she opens the door with the tray, the boy tries to break open his chocolate orange on the table, but the table is made of glass and he breaks it. You really feel for him in that moment.

*College Algebra* Raymond A. Barnett,Michael R. Ziegler,Karl E. Byleen,2000 Mathematical reform is the driving force behind the organization and development of this new college algebra text The use of technology primarily graphing utilities is assumed throughout the text The development of each topic proceeds from the concrete to the abstract and takes full advantage of technology wherever appropriate The first major objective of this book is to encourage students to investigate mathematical ideas and processes graphically and numerically as well as algebraically Proceeding in this way students gain a broader deeper and more useful understanding of

a concept or process Even though concept development and technology are emphasized manipulative skills are not ignored and plenty of opportunities to practice basic skills are present A brief look at the table of contents will reveal the importance of the function concept as a unifying theme The second major objective of this book is the development of a library of elementary functions including their important properties and uses Having this library of elementary functions as a basic working tool in their mathematical tool boxes students will be able to move into calculus with greater confidence and understanding In addition a concise review of basic algebraic concepts is included in Appendix A for easy reference or systematic review The third major objective of this book is to give the student substantial experience in solving and modeling real world problems Enough applications are included to convince even the most skeptical student that mathematics is really useful Most of the applications are simplified versions of actual real world problems taken from professional journals and professional books No specialized experience is required to solve any of the applications
