*The Theory of Direct Dark Matter Detection* Eugenio Del Nobile, 2022-05-09 This book is a pedagogical guide on how to make computations in direct dark matter DM detection The theory behind the calculation of direct detection cross sections and rates is presented touching aspects related to elementary particle physics hadronic physics nuclear physics and astrophysics The book is structured in self contained sections covering several topics ranging from the scattering kinematics to the phenomenology of direct DM searches It follows a model independent approach aiming at providing the readers with all that is needed to understand the theory and start their own analysis Meant for graduate students and researchers with interests in particle physics and phenomenology it is enriched with several worked examples from standard and non standard particle DM models Senior researchers working in different areas related to dark matter like particle and nuclear physics astrophysics and cosmology find in this book a useful and updated guide for reference [Dark Matter](#) David J. E. Marsh, David Ellis, Viraf M. Mehta, 2024-10-15 A complete treatment of all aspects of dark matter physics This book provides an incisive self contained introduction to one of the most intriguing subjects in modern physics presenting the evidence we have from astrophysics for the existence of dark matter the theories for what it could be and the cutting edge experimental and observational methods for testing them It begins with a survey of the astrophysical phenomena from rotation curves to lensing and cosmological structure formation It goes on to offer the most comprehensive overview available of all three major theories discussing weakly interacting massive particles WIMPs axions and primordial black holes The book explains the constraints on each theory such as direct detection and indirect astrophysical limits and enables students to build physical intuition using hands on exercises and supplemental material The only book to treat extensively WIMPs axions and primordial black holes Provides balanced coverage of the evidence theory and testing for dark matter from astrophysics particle physics and experimental physics Includes original problems and short quizzes throughout Accompanied by Jupyter notebooks that give sample calculations and methods to reproduce key results and graphs An ideal textbook for advanced undergraduate and graduate students and an essential reference for researchers [Moffatt's How to prepare notes of lessons](#) Thomas J. [Lethal Edge](#) Kaylea Cross, 2020-07-28 A diehard romantic looking to start over in a small town, Dr. Nina Benitez might be an astrophysicist and a scientist down to her bones, but she also believes in true love and happily ever after and won't settle for anything less. After a rocky end to her first semester teaching at the University of Montana, she's looking forward to a new school year and a fresh start in the small town of Rifle Creek. When she meets her roommate's work partner, a sexy, hard-edged detective, Nina is immediately intrigued. However, it's soon clear they're like oil and water. But when she's confronted by the painful past event she wanted to forget, she faces an even greater danger. A predator is bent on silencing her forever, and Nina's only hope of survival is the unattainable man who's captured her heart. A cynical cop determined to guard his heart, Tate Baldwin has dedicated his life to serving and protecting, first in the military and now as a detective in Rifle Creek. Badly burned by his last relationship, he isn't looking to get involved with anyone, especially a brilliant college professor who seems to have her head in the clouds. Yet even Tate can't deny the attraction between them that soon grows into something more. And when a secret from her past triggers a lethal threat, Tate will risk everything to stand between her and the monster who wants her dead.

**Astrophysics at Very High Energies** Felix Aharonian, Lars Bergström, Charles Dermer, 2013-04-04 With the success of Cherenkov Astronomy and more recently with the launch of NASA's Fermi mission, very high energy astrophysics has undergone a revolution in the last years. This book provides three comprehensive and up-to-date reviews of the recent advances in gamma ray astrophysics and of multi-messenger astronomy. Felix Aharonian and Charles Dermer address our current knowledge on the sources of GeV and TeV photons gleaned from the precise measurements made by the new instrumentation. Lars Bergström presents the challenges and prospects of astroparticle physics with a particular emphasis on the detection of dark matter candidates. The topics covered by the 40th Saas-Fee Course present the capabilities of current instrumentation and the physics at play in sources of very high energy radiation to students and researchers alike. This book will encourage and prepare readers for using space and ground-based gamma ray observatories as well as neutrino and other multi-messenger detectors.

**The Little Black Schoolbook** Mark Lope, 2011-11-16 Turn a stressful situation into a golden opportunity with The Little Black School Book Volume 2: Exams.
