## Covalent Bonding

**Task:**  
Draw a diagram to show the electrons and the core of the molecules below.

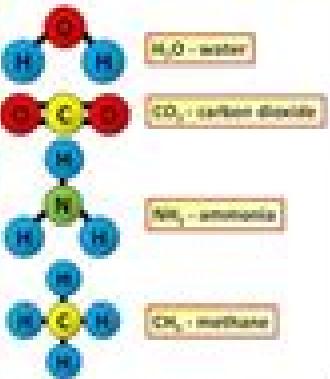

- 1.  $\text{CO}_2$  - carbon dioxide
- 2.  $\text{CH}_4$  - methane
- 3.  $\text{NH}_3$  - ammonia
- 4.  $\text{H}_2\text{O}$  - water
- 5.  $\text{O}_2$  - ozone
- 6.  $\text{H}_2$  - hydrogen
- 7.  $\text{PCl}_3$  - phosphorus
- 8.  $\text{HCl}$  - hydrochloric acid
- 9.  $\text{SO}_2$  - sulfur dioxide
- 10.  $\text{NO}_2$  - nitric oxide
- 11.  $\text{NaCl}$  - sodium chloride
- 12.  $\text{CaO}$  - calcium oxide
- 13.  $\text{Fe}_2\text{O}_3$  - ferric oxide
- 14.  $\text{CH}_3\text{-carbon}$

## Simple Covalent Compounds

**Introduction:**

Hydrogen, ammonia, methane and water are the simple molecules with covalent bonds. All have very strong bonds between the atoms, but much weaker forces holding the molecules together. When one of these substances meets another, it is these weak intermolecular forces that break, not the strong covalent bonds.

## Giant Covalent Compounds

**Introduction:**  
Giant covalent structures consist of millions of atoms, each joined to adjacent atoms by covalent bonds. The atoms are usually arranged into giant regular lattices - extremely strong structures because of the many bonds involved.

- Properties of giant covalent structures:**
- Very high melting points - substances with giant covalent structures have very high melting points, because lots of strong covalent bonds must be broken.
  - Variable conductivity - substances are insulators because they contain few electrons, so it does conduct electricity.

Chemical bonding - A114

## Simple molecular compounds SPAG activity

Covalent bonds form between non-metal atoms. Each bond consists of a shared pair of electrons and is very strong. Covalently bonded substances fall into two main types:

- Simple molecules
- Giant covalent structures

## Properties of simple molecular substances

Low melting and boiling points - This is because the weak intermolecular forces break down easily.

Non-conductive - Substances with a simple molecular structure do not conduct electricity. This is because they do not have any free electrons or an overall electric charge.

Hydrogen, ammonia, methane and

molecules with covalent bonds between the atoms holding the molecules together. Substances' melts or liquids or solids with low melting points.

Mageswary Karpudewan,Ahmad Nurulazam Md Zain,A.L. Chandrasegaran,2017-02-28 This book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school It suggests teaching approaches based on research data to address students common misconceptions Detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included The science education literature extensively documents the findings of studies about students misconceptions or alternative conceptions about various science concepts Furthermore some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these misconceptions among high school science students These studies however are largely unavailable to classroom practitioners partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them In response this book offers an essential and easily accessible guide Roadmap to the Regents
