Manual of Embryo Selection in Human Assisted Reproduction Catherine Racowsky, Jacques Cohen, Nicholas Macklon, 2023-01-26 Selecting the best embryo to transfer to the uterus is key to successful in vitro fertilization (IVF). A huge amount of research has been devoted to this topic and there are numerous methods used from simple morphological assessment to molecular biological techniques to assess the genome and metabolism of the newly fertilized embryo. For many of these techniques an adequate evidence base is lacking and expert opinion is valuable. Clinical imperatives require ranking all embryos in a cohort according to their viability, thereby enabling the selection of the best embryo to optimize live birth outcome, a key indicator used to measure and rate IVF Clinics worldwide. This clear and informative manual will provide embryologists and clinicians with an overview of the tools now available to assist in embryo selection as well as evidence for their efficacy and safety and the broader considerations that must underlie these important clinical decisions.
