Seger,Karen Seger,2018-11-12 This seventh volume of final reports of the Lahav Research Project s efforts at Tell Halif in Southern Israel focuses on the team s excavations and related regional ethnographic research at adjacent Khirbet Khuweilifeh an early twentieth century settlement of Bedouin and Arab fellahin clients These efforts illustrate the symbiosis between the itinerant Bedouin and their seasonal sharecropper neighbors along the northern flanks of the Negev desert during and following the First World War in southern Palestine The stratigraphic excavation and recovery of material culture from Cave Complex A revealed a pattern of occupation dating from the late nineteenth century C E up to the mid 1940s and produced hundreds of artifacts and samples giving testimony to the lifeways of the fellahin who had inhabited the complex The associated ethnographic research with Bedouin sheikhs and Hebron area merchant informants established that the Complex s most recent occupants were the family of a plow maker named Khalil al Kaayke The studies elucidated in this volume articulate in more detail the family s patterns of subsistence showing the interdependence of the Bedouin and fellahin partners Examination of the pottery remains provides a profile of the site s Stratum I early twentieth century ceramic forms and also reveals earlier Islamic period and pre Islamic traces Over the past century the lifeways of these early twentieth century Bedouin and their fellahin village neighbors in southern Palestine have been rapidly disappearing This volume serves to chronicle and preserve data on their waning history and culture *Carolina Science and Math* Carolina Biological Supply Company,2003 HUMAN SKELETAL ANATOMY Scott I. Fairgrieve,Tracy S. Oost,2001-01-01 The Human Skeletal Anatomy Laboratory Manual and Workbook has been designed to help students who are enrolled in courses dedicated to this topic It is the product of many years of designing and instructing a Human Skeletal Biology course for undergraduate students The key to this manual is flexibility Instructors may utilize as much or as little of the manual as they see fit It is largely based on the regional approach to anatomy However the first section of the manual begins with a survey of the

microscopic and macroscopic structure of bone After grounding the student in the basics of bone structure the manual then turns to the gross morphological anatomy of skeletal elements The axial skeleton is dealt with first then the appendicular skeleton The manual is designed to cover material in an incremental fashion Specifically the anatomy of less complicated bones such as the ribs sternum and hyoid are discussed prior to other axial bones in order to acquaint students with how to handle real bone material in the laboratory Each successive laboratory session demands more from the student in both the level of understanding and expectations in assigned laboratory exercises Each laboratory session begins with an introduction in order to familiarize the student with the areas to be studied Subsequently the laboratory session has a stated purpose with clear instructions of expectations and learning objectives Important Terms are clearly indicated in boxes to stress to students that these must be understood This is then followed by a clear laboratory Procedure for the student to follow This usually involves the identification of particular features of assigning specific tasks as identified in the various Exercises Finally as a means of stressing the applicability of what has been learned in the laboratory exercise the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens The student is then required to interpret this information and produce for the next class or session a Laboratory Research Report Guidelines for these reports are contained within this manual Diagrams photographs have been provided for students to label These diagrams are meant to be a study guide Instructors may wish to add anatomical features or de-emphasize certain features accordingly

Killing the Dead John Blair, 2025-11-11 A riveting history of vampire panics across cultures and down through the millennia and why killing the dead is better than killing the living *Killing the Dead* provides the first in depth global account of one of the world's most widespread yet misunderstood forms of mass hysteria the vampire epidemic In a spellbinding narrative John Blair takes readers from ancient Mesopotamia to present day Haiti to explore a macabre frontier of life and death where corpses are believed to wander or do harm from the grave and where the vampire is a physical expression of society's inexplicable terrors and anxieties In 1732 the British public opened their morning papers to read of lurid happenings in eastern Europe Serbian villagers had dug up several corpses and had found them to be undecayed and bloated with blood Recognizing the marks of vampirism they mutilated and burned them Centuries earlier the English themselves engaged in the same behavior In fact vampire epidemics have flared up throughout history in ancient Assyria China and Rome medieval and early modern Europe and the Americas Blair blends the latest findings in archaeology anthropology and psychology with vampire lore from literature and popular culture to show how these episodes occur at traumatic moments in societies that upend all sense of security and how the European vampire is just one species in a larger family of predatory supernatural entities that includes the female flying demons of Southeast Asia and the lustful yogins of India Richly

illustrated Killing the Dead provocatively argues that corpse killing far from being pathological or unhealthy served as a therapeutic and largely harmless outlet for fear hatred and paranoia that would otherwise result in violence against marginalized groups and individuals
