### LEARNING GOALS

Students will have hands on activity that demonstrates how changes in environmental conditions can result in the evolution of a species.

- Darwin's observations on the Galapagos Finches, which provides a framework for understanding natural selection and evolution.
- Subsequent (and still ongoing) research by Peter and Rosemary Grant which describes the rapid evolutionary changes they observed in the ground finches of Daphne Major Island.
- Students will become finches, with each student representing one beak size and shape.
  - Make hypotheses about how the different beak types and the seed types available will affect his/her ability to forage for food.
  - Test the hypotheses by using their beaks to collect seeds.
  - Organize their own data into tables and graphs and evaluate their hypotheses.
  - Develop their own conclusions, based on the data, about how changes in selection pressure (environmental conditions) can result in differences in survival, and subsequently, in the adaptation and evolution of traits in a population.

**PACK OF LIES** Sharon Zoller, 2024-04-24 Has your faith in God been damaged by what you've been taught in science? In *Pack of Lies* author Sharon Zoller presents information to breathe new life into your faith demonstrating that school textbooks don't reflect the current scientific information. She discusses the spiritual and cultural consequences of being taught the world is a product of atheistic evolution and she reveals eleven topics from public school science texts that try to support that atheistic evolutionary view. These topics include peer-reviewed articles, rock, sedimentary rock, coal, whales, dinosaurs, similar DNA, developmental similarities, structural similarities, evolution, and natural selection and fossils and transitional forms. Each quote from the textbook is followed by a section rich in gold nugget quotes from today's top scientists like Stephen Meyer, Michael Behe, and James Tour. **Key Stage 3 Science - Student Book 3** Tracey Baxter, Sunetra Berry, Pat Dower, Ken Gadd, Anne Pilling, 2021-04-22 Secure the key science skills and knowledge students need to succeed in the new KS3 Science curriculum with *Pupil Book 3*. **Science and Conservation in the Galapagos Islands** Stephen J. Walsh, Carlos F. Mena, 2012-12-05 In this launch of the Galapagos series this book provides a broad framing assessment of the current status of social and ecological systems in the Galapagos Islands and the feedback that explicitly links people to the environment. It also highlights the challenges to conservation imposed by tourism in the Galapagos Islands and the attendant migration of people from mainland Ecuador to service the burgeoning tourism industry. Further, there is an emphasis on the status of the terrestrial and marine environments that form the very foundation of the deep attraction to the Islands by tourists, residents, scholars, and conservationists. **Exploring Biology in the Laboratory: Core Concepts** Murray P. insightful exploration of the iconic Galapagos tortoises and how their fate is inextricably linked to our own in a rapidly changing world The Galapagos archipelago is often viewed as a last foothold of pristine nature For sixty years conservationists have worked to restore this evolutionary Eden after centuries of exploitation at the hands of pirates whalers and island settlers This book tells the story of the islands namesakes the giant tortoises as coveted food sources objects of natural history and famous icons of conservation and tourism By doing so it brings into stark relief the paradoxical and impossible goal of conserving species by trying to restore a past state of prehistoric evolution The tortoises Elizabeth Hennessy demonstrates are not prehistoric but rather microcosms whose stories show how deeply human and nonhuman life are entangled In a world where evolution is thoroughly shaped by global history Hennessy puts forward a vision for conservation based on reckoning with the past rather than trying to erase it *Ebook: Vertebrates: Comparative Anatomy, Function, Evolution* Kenneth Kardong, 2014-10-16 This one semester text is designed for an upper level majors course

human settlement and activity on the islands including the transition from subsistence to a fishing economy and more recently tourism all in the context of increasingly restrictive conservation regulations. Importantly the book also explores the development of the concept and practice of sustainable development across the islands as a framework for future economic development pursuing an approach that reconciles the needs of the resident population with conservation of this fragile environment. The book is intended for a broad readership from those engaged in geological and ecological studies, college and university educators and conservation practitioners to more general visitors to the islands.
