Johnston, 2001-09-30 2003 Paul Bunge Prize of the Hans R Jenemann Foundation for the History of Scientific Instruments Judging the brightness and color of light has long been contentious Alternately described as impossible and routine it was beset by problems both technical and social How trustworthy could such measurements be Was the best standard of intensity a gas lamp an incandescent bulb or a glowing pool of molten metal And how much did the answers depend on the background of the specialist A History of Light and Colour Measurement Science in the Shadows is a history of the hidden workings of physical science a technical endeavor embedded in a social context It argues that this undisciplined subject straddling academia commerce and regulation may be typical not only of 20th century science but of its future Attracting scientists engineers industrialists and artists the developing subject produced a new breed of practitioners having mixed provenance The new measurers of light had to decide the shape not only of their specialism but of their careers were they to be a part of physics engineering or psychology The physical scientists who dominated the subject into the early 20th century made their central aim the replacement of the problematic human eye with physical detectors of light For psychologists between the wars though describing the complexity of color was more important than quantifying a handful of its dimensions And after WWII military designers shaped the subject of radiometry and subsumed photometry and colorimetry within it Never attaining a professional cachet these various specialists moved fluidly between science and technology through government industry and administration **The Victorian Eye** Chris Otter, 2008-11-15 During the nineteenth century Britain became the first gaslit society with electric lighting arriving in 1878 At the same time the British government significantly expanded its power to observe and monitor its subjects How did such enormous changes in the way people saw and were seen affect Victorian culture To answer that question Chris Otter mounts an ambitious history of illumination and vision in Britain drawing on extensive research into everything from the science of perception and lighting technologies to urban design and government administration He explores how light facilitated such practices as safe transportation and private reading as well as institutional efforts to collect knowledge And he contends that contrary to presumptions that illumination helped create a society controlled by intrusive surveillance the new radiance often led to greater personal freedom and was integral to the development of modern liberal society The Victorian Eye s innovative interdisciplinary approach and generous illustrations will captivate a range of readers interested in the history of modern Britain visual culture technology and urbanization **A History of Optics from Greek Antiquity to the Nineteenth**

Century Olivier Darrigol, 2012-01-26 This book is a long term history of optics from early Greek theories of vision to the nineteenth century victory of the wave theory of light It is a clear and richly illustrated synthesis of a large amount of literature and a reliable and efficient guide for anyone who wishes to enter this domain **History of Technology Volume 28** Ian Inkster, 2009-03-31 Technical standards have received increasing attention in recent years from historians of science and technology management theorists and economists Often inquiry focuses on the emergence of stability technical closure and culturally uniform modernity Yet current literature also emphasizes the durability of localism heterogeneity and user choice This collection investigates the apparent tension between these trends using case studies from across the nineteenth and twentieth centuries The History of Technology addresses tensions between material standards and process standards explores the distinction between specifying standards and achieving convergence towards them and examines some of the discontents generated by the reach of standards into everyday life Includes the Special Issue By whose standards Standardization stability and uniformity in the history of information and electrical technologies *Color in the Age of Impressionism* Laura Anne Kalba, 2017-04-21 This study analyzes the impact of color making technologies on the visual culture of nineteenth century France from the early commercialization of synthetic dyes to the Lumi re brothers perfection of the autochrome color photography process Focusing on Impressionist art Laura Anne Kalba examines the importance of dyes produced in the second half of the nineteenth century to the vision of artists such as Edgar Degas Pierre Auguste Renoir and Claude Monet The proliferation of vibrant new colors in France during this time challenged popular understandings of realism abstraction and fantasy in the realms of fine art and popular culture More than simply adding a touch of spectacle to everyday life Kalba shows these bright varied colors came to define the development of a consumer culture increasingly based on the sensual appeal of color Impressionism emerging at a time when inexpensively produced color functioned as one of the principal means by and through which people understood modes of visual perception and signification mirrored and mediated this change shaping the ways in which people made sense of both modern life and modern art Demonstrating the central importance of color history and technologies to the study of visuality Color in the Age of Impressionism adds a dynamic new layer to our understanding of visual and material culture **Blackbody Radiometry** Victor Sapritsky, Alexander Prokhorov, 2020-10-19 This book the first of a two volume set focuses on the basic physical principles of blackbody radiometry and describes artificial sources of blackbody radiation widely used as sources of optical radiation whose energy characteristics can be calculated on the base of fundamental physical laws Following a review of radiometric quantities radiation laws and radiative heat transfer it introduces the basic principles of blackbody radiators design details of their practical implementation and methods of measuring their defining characteristics as well as metrological aspects of blackbody based measurements Chapters are dedicated to the effective emissivity concept methods of increasing effective emissivities their measurement and modeling using the Monte Carlo method techniques of blackbody radiators heating

cooling isothermalization and measuring their temperature An extensive and comprehensive reference source this book is of considerable value to students researchers and engineers involved in any aspect of blackbody radiometry **Books on**

Wilk, 2021 In the almost twenty years since I began writing my essays on strange and quirky optics I have been through several employers but in all that time I have stayed a contributing editor for the Optical Society of America No matter where I was during the day I always worked on producing these nuggets of infotainment with some regularity I have always had a backlog of tentative pieces to write but new topics arose just as rapidly so I have never been at a loss with a new piece The newsletter of MIT's Spectroscopy Lab has in that time disappeared so the essays in this volume are either ones that originally appeared in Optics and Photonics News or else have not previously been published in any magazine As I stated in the introduction to How the Ray Gun Got Its Zap my goal was to produce quirky interesting and somewhat humorous essays that had a slyly pedagogical edge Education by stealth as the BBC said In reality I often start off writing one of these to satisfy myself about some minor mystery of optical science or engineering *Light and Video Microscopy* Randy O.

Wayne, 2013-12-16 The purpose of this book is to provide the most comprehensive easy to use and informative guide on light microscopy Light and Video Microscopy will prepare the reader for the accurate interpretation of an image and understanding of the living cell With the presentation of geometrical optics it will assist the reader in understanding image formation and light movement within the microscope It also provides an explanation of the basic modes of light microscopy and the components of modern electronic imaging systems and guides the reader in determining the physicochemical information of living and developing cells which influence interpretation Brings together mathematics physics and biology to provide a broad and deep understanding of the light microscope Clearly develops all ideas from historical and logical foundations Laboratory exercises included to assist the reader with practical applications Microscope discussions include bright field microscope dark field microscope oblique illumination phase contrast microscope photomicrography fluorescence microscope polarization microscope interference microscope differential interference microscope and modulation contrast microscope Circadian Physiology Roberto Refinetti, PhD., 2016-04-21 Circadian rhythms influence most of our life

activities notably getting up and going to sleep every day This new edition of Circadian Physiology delves into the mechanisms surrounding how these rhythms work the physiology and biology behind them and the latest research on this cutting edge field The book also discusses a wide variety of practical applications

Visions of Electric Media Ivy Roberts, 2025-10-01 Visions of Electric Media is an historical examination into the early history of television as it was understood during the Victorian and Machine ages How did the television that we use today develop into a functional technology What did Victorians expect it to become How did the vision of television change once viewers could actually see pictures on a screen We will journey through the history of television from the first indications of live communications in technology and culture in the late nineteenth century to the development of electronic televisual systems in the early twentieth century Along the way we will investigate the philosophy folklore engineering practices and satires that went into making television a useful medium

Philanthropy and Light Oriel Prizeman, 2016-04-22 Walter Gropius associated standardisation with promoting civilisation in 1935 yet Andrew Carnegie's influence on the proliferation of pattern book public library plans internationally predated these observations by 50 years Through the first twenty years of his programme he supported the erection of almost three thousand public buildings across Britain and America Though better acknowledged in the US than the UK this philanthropic contribution radically extended the scope of public provision and remains incomparable in its scale and scope in both nations Frequently engraved with the self-deifying slogan Let there be Light open access to navigate these new interior public spaces after work coincided with the first provision of electric light Towards the end of the nineteenth century professional groups had sought to specify minimum standards of natural light and air for schools and hospitals However the commercial quantification of electricity accelerated the development of a readily comparable vocabulary to prescribe adequate quantities of light for all tasks regardless of their location or orientation Seeking to gauge the extent of universal values this book concentrates on the design and performance of a handful of early Carnegie library buildings in Britain and America identifying their response to contemporary design theory but also by contrast to their respective local environmental contexts It examines whether their standards of provision were equitable and if these privately financed public buildings were the first roots of generically standardised public environments to be shared transatlantically The book also argues that the public library building type can provide a datum for acknowledging the twentieth century legacy of shared international environmental standards for public spaces more broadly

The Republic of Color Michael Rossi, 2019-08-30 The Republic of Color delves deep into the history of color science in the United States to unearth its origins and examine the scope of its influence on the industrial transformation of turn of the century America For a nation in the grip of profound economic cultural and demographic crises the standardization of color became a means of social reform a way of sculpting the American population into one more amenable to the needs of the emerging industrial order Delineating color was also a way to characterize the vagaries of human nature and to create ideal structures through which those humans would act in a

newly modern American republic Michael Rossi's compelling history goes far beyond the culture of the visual to show readers how the control and regulation of color shaped the social contours of modern America and redefined the way we see the world

Gabriel Lippmann's Colour Photography Hanin Hannouch, 2025-10-01 Physicist Gabriel Lippmann's 1845-1921 photographic process is one of the oldest methods for producing colour photographs So why do the achievements of this 1908 Nobel laureate remain mostly unknown outside niche circles Using the centenary of Lippmann's death as an opportunity to reflect upon his scientific photographic and cultural legacy this book is the first to explore his interferential colour photography Initially disclosed in 1891 the emergence of this medium is considered here through three shaping forces science media and museums A group of international scholars reassess Lippmann's reception in the history of science where he is most recognised by going well beyond his endeavours in France and delving into the complexity of his colour photography as a challenge to various historiographies Moreover they analyse colour photographs as optical media thus pluralising Lippmann photography's ties to art cultural and imperial history as well as media archaeology The contributors also focus on the interferential plate as a material object in need of both preservation and exhibition one that continues to fascinate contemporary analogue photographers This volume allows readers to get to know Lippmann grasp the interdisciplinary complexity of his colourful work and ultimately expand his place in the history of photography

Einstein's Generation Richard Staley, 2008 Einstein's Generation offers a new approach to the origins of modern physics by exploring both the material culture that stimulated relativity and the reaction of Einstein's colleagues to his pioneering work

Holograms Sean Johnston, 2016 Holograms have been in the public eye for over a half century but their influences have deeper cultural roots No other visual experience is quite like interacting with holograms no other cultural product melds the technological sublime with magic and optimism in quite the same way As holograms have evolved they have left their audiences alternately fascinated bemused inspired or indifferent From expressions of high science to countercultural art to consumer security holograms have represented modernity magic and materialism Their most pervasive impact has been to galvanise hopeful technological dreams Engineers artists hippies and hobbyists have played with and dreamed about holograms This book explores how holograms found a place in distinct cultural settings It is aimed at readers attracted to pop culture visual studies and cultural history scholars concerned with media history fine art and material studies and most of all cross disciplinary audiences intrigued about how this ubiquitous but still mysterious visual medium grew up in our midst and became entangled in our culture This book explores the technical attractions and cultural uses of the hologram how they were shaped by what came before them and how they have matured to shape our notional futures Today holograms are in our pockets as identity documents and in our minds as gaming fantasies and faux hologram performers Why aren't they more often in front of our eyes

[Automotive Lighting and Human Vision](#) Burkard Wördenweber, Jörg Wallaschek, Peter Boyce, Donald D. Hoffman, 2007-03-13 It is possible to buy excellent books on human

vision as well as about automotive lighting Unfortunately these books have little or no common content But in fact these fields do overlap Providing optimal conditions for human vision is what automotive lighting is all about Our motivation for writing this book arises from interdisciplinary studies of human vision and lighting Initially we intended the book to provide background information on human vision to engineers working in automotive lighting At the same time we planned to introduce basic concepts of automotive lighting to experts in human vision However because of the intricate connections between human vision and automotive lighting it turns out that the book provides new insights to anyone interested in either or both subjects The subject matter is complex and spans a number of disciplines from psychology to mechatronics Hence there are very few individuals who are experts in all fields Looking at the nature of human vision it is surprising to find out how much every one of us takes it for granted Rarely are we aware of how we use vision predominantly to verify our internal model of our surroundings Many accidents particularly at night stem from the fact that our internal model misrepresented a significant part of our surroundings Taking knowledge on human vision into account in the design of future automotive lighting systems reduces the risk of accidents at night

Techniques and Principles in Three-Dimensional Imaging: An Introductory Approach Richardson, Martin, 2013-12-31 This book provides the reader with a concrete understanding of basic principles and pitfalls for 3D capturing highlighting stereoscopic imaging systems including holography

Holographic Visions Sean Johnston, 2006-04-06 This is a history of how the new science of holography developed intellectually socially and culturally Based on interviews with pioneer holographers and archival research it shows how science technology art and wider culture are entwined in the modern world
