Davidson, Stan Prentiss, 1970 *Aircraft Surveillance Systems* Busyairah Syd Ali, 2017-11-06 The Communication Navigation and Surveillance CNS systems provide air traffic controllers with the information necessary to ensure the specified separation between aircraft and efficient management of airspace as well as assistance to flight crew for safe navigation However the radar systems that support air traffic management ATM and in particular air traffic control ATC are at their operational limit This is particularly acute in the provision of the ATC services in low altitude remote and oceanic areas Limitations in the current surveillance systems include unavailability of services in oceanic and remote areas limited services during extreme

weather conditions and outdated equipment with limited availability of spare parts to support system operation These limitations have resulted in fatal accidents This book addresses the limitations of radar to support ATC in various operational environments identified and verified by analysing five years of safety data from Avinor the Air Navigation Service Provider ANSP in Norway It derives a set of taxonomy and from this develops a causal model for incident accident due to limitations in the surveillance system The taxonomy provides a new method for ANSPs to categorize incidents while the causal model is useful for incident accident investigations The book also provides theoretical justifications for the use of Automatic Dependent Surveillance Broadcast ADS B to overcome the limitations of radar systems and identify areas of improvements to enable seamless ATC services Written in a style that makes it accessible to non specialists Aircraft Surveillance Systems will be of interest to many in the field of aviation particularly ATM safety and accident incident investigation It will also offer a useful reference on this vital topic for air traffic management courses *The Avro Shackleton* Jason Nicholas

Moore,2023-09-17 Long ranged maritime reconnaissance aircraft were a part of British wartime strategy since the First World War in the form of flying boats During the Second World War the flying boats were increasingly replaced by land based aircraft such as the American Lend Lease Flying Fortresses and Liberators After the war these aircraft were replaced by a purpose built aircraft the Avro Shackleton which traced its ancestry through the Lincoln and Lancaster all the way back to the early Second World War bomber the Manchester The road from the Manchester to the Shackleton was a long one and it is described comprehensively The Shackleton itself went through two major changes from the MR 1 to the MR 2 then from the MR 2 to the MR 3 Along with a detailed technical description of the Shackleton and its weaponry photographs and accurate colour profiles accompany the text to illustrate the Shackleton This aircraft is compared and contrasted with its post war piston engined counterparts Its former use with the United Kingdom and South Africa is also described The current survivors especially an MR 2 WR963 in the United Kingdom and an AEW 2 WL790 in the United States are described in great detail

Fighting Machines Dan Saxon,2021-12-03 Lethal autonomous weapons are weapon systems that can select and destroy targets without intervention by a human operator Fighting Machines explores the relationship between lethal autonomous weapons LAWS the concept of human dignity and international law Much of this analysis speaks to three fundamental and related problems When a LAWS takes a human life is that killing a violation of human dignity Can states and non state actors use LAWS in accordance with international law And are there certain responsibilities of human decision making during wartime that we should not delegate to machines In the book Dan Saxon argues that the use of LAWS to take human life constitutes a violation of human dignity Rather than concentrating on the victims of the use of lethal force Saxon instead focuses on the technology and relevant legal principles and rules to advance several propositions First as LAWS operate at increasingly greater speeds their use will undermine the opportunities for and the value of human reasoning and judgment Second by transferring responsibility for reasoning and judgment about the use of lethal force to computer

software the use of LAWS violates the dignity of the soldiers commanders and law enforcement officers who historically have made such decisions and therefore breaches international law Third weapon designs that facilitate teamwork between humans and autonomous systems are necessary to ensure that humans and LAWS can operate interdependently so that individuals can fulfil their obligations under international law including the preservation of their own dignity and ensure that human reasoning and judgment are available for cognitive functions better suited to humans than machines Fighting Machines speaks to the fields of international humanitarian law human rights criminal law and legal philosophy It will also be of interest to non lawyers especially military officers government policy makers political scientists and international relations scholars as well as roboticists and ethicists *Concorde Pocket Manual* Richard Johnstone-Bryden,2018-02-22 The story of the legendary supersonic passenger jet told through a series of contemporary documents and records First flown in 1969 Concorde was the first supersonic aircraft to go into commercial service in 1976 and made her final flight in 2003 She was operated primarily by British Airways and Air France British Airways Concorde made just under 50 000 flights and flew more than 2 5m passengers supersonically A typical London to New York crossing would take a little less than three and a half hours compared to around eight hours for a subsonic flight In November 1986 a Concorde flew around the world covering 28 238 miles in 29 hours 59 minutes Today Concorde can be viewed at museums across the UK and in France including at IWM Duxford Brooklands and Fleet Air Arm Museum as well as at Heathrow Manchester and Paris Orly airports However there have been recent reports suggesting that Concorde may start operating commercially again Through a series of key documents the book tells the story of how the aircraft was designed and developed as well as ground breaking moments in her commercial history **AIR CRASH INVESTIGATIONS - CRACKED SOLDER JOINT - The Crash of Indonesia AirAsia Flight 8501** Dirk Barreveld,2016-02-24 On 28 December 2014 an Airbus A320 216 aircraft registered as PK AXC was cruising at 32 000 feet on a flight from Juanda Airport Surabaya Indonesia to Changi Airport Singapore with total occupants of 162 persons The Pilot in Command PIC acted as Pilot Monitoring PM and the Second in Command SIC acted as Pilot Flying PF The Flight Data Recorder FDR recorded that many master cautions activated following the failure of the Rudder Travel Limiter which triggered Electronic Centralized Aircraft Monitoring ECAM message of AUTO FLT RUD TRV LIM SYS The crew tried repeatedly to reset the computers but the autopilot and auto thrust disengaged and the flight control reverted to Alternate Law The investigation showed that the loss of electricity and the RTLU failure were caused by a cracked solder joint All occupants of the plane were killed in the accident Eject! Eject! John Nichol,2023-05-25 Eject Eject When the call is made to abandon an aircraft it s only the beginning of the story From the Sunday Times bestselling writer John Nichol author of Spitfire Lancaster and Tornado comes a brilliant new book that reveals the astonishing story of an invention that has saved many thousands of lives around the world including his own the ejection seat Nichol tells the remarkable tale of how the ejection seat was first conceived during the Second World War as countless lives were lost in

accidents and in battle In the wake of the war that technological race to save aircrew lives using explosive seats continued at an incredible pace Nichol tells the story of the brave men who risked their lives testing those early devices and interviewed the first British pilot to eject back in 1949 when ejection from pulling the handle to being under the parachute took thirty seconds Today that figure is down to around one second Packed with interviews with aircrew who know exactly how it feels to Bang Out from an aircraft at high speed both in peace and in war the book gives the reader a vivid sense of what that life saving experience feels like but also features the moving accounts of what happens next from the viewpoint of both the crews and their families who often have little or no information about whether or not their loved ones have survived Because ejecting is just the start of a journey Packed with dramatic action incredible science and moving recollections Eject Eject is an essential read

Identification Revolution Alan Gelb,Anna Diofasi Metz,2018-01-16 Some 600 million children worldwide do not legally exist Without verifiable identification they and unregistered adults could face serious difficulties in proving their identity whether to open a bank account purchase a SIM card or cast a vote Lack of identification is a barrier to full economic and social inclusion Recent advances in the reach and technological sophistication of identification systems have been nothing less than revolutionary Since 2000 over 60 developing countries have established national ID programs Digital technology particularly biometrics such as fingerprints and iris scans has dramatically expanded the capabilities of these programs Individuals can now be uniquely identified and reliably authenticated against their claimed identities By enabling governments to work more effectively and transparently identification is becoming a tool for accelerating development progress Not only is provision of legal identity for all a target under the Sustainable Development Goals but this book shows how it is also central to achieving numerous other SDG targets Yet challenges remain Identification systems can fail to include the poor leaving them still unable to exercise their rights access essential services or fully participate in political and economic life The possible erosion of privacy and the misuse of personal data especially in countries that lack data privacy laws or the capacity to enforce them is another challenge Yet another is ensuring that investments in identification systems deliver a development payoff There are all too many examples where large expenditures sometimes supported by donor governments or agencies appear to have had little impact

Identification Revolution Can Digital ID be Harnessed for Development offers a balanced perspective on this new area covering both the benefits and the risks of the identification revolution as well as pinpointing opportunities to mitigate those
