Agent-Based Modelling of Social Networks in Labour-Education Market System Alexander Tarvid, 2015-11-27 This book covers the modelling of human behaviour in the education and labour markets which due to their interdependency are viewed as one system Important factors influencing the decision making of individuals and firms in this system are discussed The role of social environment and networks is stressed The approach of agent based modelling is presented and compared with standard economic modelling and other simulation techniques in the context of modelling complex adaptive systems Practical questions in building agent based models of labour education market system with social networks are discussed These questions include modelling the structure of education system and agent behaviour there modelling and calibrating the labour market without and with firms generating the social network defining its behaviour and calibrating it and embedding the resulting system into a larger model **Agent-based Modeling and Simulation** S. Taylor, 2014-08-27

Thomas Chesney, 2021 This book illustrates the potential for computer simulation in the study of modern slavery and worker abuse and by extension in all social issues It lays out a philosophy of how agent based modelling can be used in the social sciences In addressing modern slavery Chesney considers precarious work that is vulnerable to abuse like sweat shop labour and prostitution and shows how agent modelling can be used to study understand and fight abuse in these areas He explores the philosophy application and practice of agent modelling through the popular and free software NetLogo This topical book is grounded in the technology needed to address the messy chaotic real world problems that humanity faces in this case the serious problem of abuse at work but equally in the social sciences which are needed to avoid the unintended consequences inherent to human responses It includes a short but extensive NetLogo guide which readers can use to quickly learn this software and go on to develop complex models This is an important book for students and researchers of computational social science and others interested in agent based modelling *Agent-Based Modelling* Giacomo Gallegati, Mauro

Gallegati, Simone Landini, 2024-12-31 This Element works as non technical overview of Agent Based Modelling ABM a

methodology which can be applied to economics as well as fields of natural and social sciences This Element presents the introductory notions and historical background of ABM as well as a general overview of the tools and characteristics of this kind of models with particular focus on more advanced topics like validation and sensitivity analysis Agent based simulations are an increasingly popular methodology which fits well with the purpose of studying problems of computational complexity in systems populated by heterogeneous interacting agents

Agent-Based Modelling of Socio-Technical Systems

Koen H. van Dam, Igor Nikolic, Zofia Lukso, 2012-10-08 Decision makers in large scale interconnected network systems require simulation models for decision support The behaviour of these systems is determined by many actors situated in a dynamic multi actor multi objective and multi level environment How can such systems be modelled and how can the socio technical complexity be captured Agent based modelling is a proven approach to handle this challenge This book provides a practical introduction to agent based modelling of socio technical systems based on a methodology that has been developed at TU Delft and which has been deployed in a large number of case studies The book consists of two parts the first presents the background theory and methodology as well as practical guidelines and procedures for building models In the second part this theory is applied to a number of case studies where for each model the development steps are presented extensively preparing the reader for creating own models

Agent-Based Modeling of Social Conflict

Carlos M. Lemos, 2017-10-24 This Brief revisits and extends Epstein s classical agent based model of civil violence by considering important mechanisms suggested by social conflict theories Among them are relative deprivation as generator of hardship generalized vanishing of the risk perception massive fear loss when the uprisings surpass a certain threshold endogenous legitimacy feedback and network influence effects represented by the mechanism of dispositional contagion The model is explored in a set of computer experiments designed to provide insight on how mechanisms lead to increased complexity of the solutions The results of the simulations are compared with statistical analyses of estimated size duration and recurrence of large demonstrations and riots for eight African countries affected by the Arab Spring based on the Social Conflict Analysis Database It is shown that the extensions to Epstein s model proposed herein lead to increased generative capacity of the agent based model i e a richer set of meaningful qualitative behaviors as well the identification of key mechanisms and associated parameters with tipping points The use of quantitative information international indicators and statistical analyses of conflict events allows the assessment of the plausibility of input parameter values and simulated results and thus a better understanding of the model s strengths and limitations The contributions of the present work for understanding how mechanisms of large scale conflict lead to complex behavior include a new form of the estimated arrest probability a simple representation of political vs economic deprivation with a parameter which controls the sensitivity to value endogenous legitimacy feedback and the effect of network influences due to small groups and activists In addition the analysis of the Social Conflict Analysis Database provided a quantitative description of the impact of the Arab Spring in several countries

focused on complexity issues such as peaceful vs violent spontaneous vs organized and patterns of size duration and recurrence of conflict events in this recent and important large scale conflict process This book will appeal to students and researchers working in these computational social science subfields

Agent-Based Models Nigel Gilbert, 2008 Aimed at readers with minimal experience in computer programming this brief book provides a theoretical and methodological rationale for using ABM in the social sciences It goes on to describe some carefully chosen examples from different disciplines illustrating different approaches to ABM It concludes with practical advice about how to design and create ABM a discussion of validation procedures and some guidelines about publishing articles based on ABM

Agent-Based Simulation of Organizational Behavior Davide Secchi, Martin Neumann, 2015-08-25 The aim of this book is to demonstrate how Agent Based Modelling ABM can be used to enhance the study of social agency organizational behavior and organizational management It derives from a workshop sponsored by the Society for the Study of Artificial Intelligence and the Simulation of Behavior AISB held at Bournemouth University Business School in 2014 on Modelling Organizational Behavior and Social Agency The contents of this book are divided into four themes Perspectives Modeling Organizational Behavior Philosophical and Methodological Perspective and Modeling Organized Crime and Macro Organizational Phenomena ABM is a particular and advanced type of computer simulation where the focus of modeling shifts to the agent rather than to the system This allows for complex and more realistic representations of reality facilitating an innovative socio cognitive perspective on organizational studies The editors and contributing authors claim that the use of ABM may dramatically expand our understanding of human behavior in organizations This is made possible because of a the computational power made available by technological advancements b the relative ease of the programming c the ability to borrow simulation practices from other disciplines and d the ability to demonstrate how the ABM approach clearly enables a socio cognitive perspective on organizational complexity Showcasing contributions from academics and researchers of various backgrounds and discipline this volume provides a global interdisciplinary perspective

Agent-Based Approaches in Economic and Social Complex Systems VIII Yutaka Nakai, Yuhsuke Koyama, Takao Terano, 2015-06-05 Agent based modeling simulation is an emergent approach to the analysis of social and economic systems It provides a bottom up experimental method to be applied to social sciences such as economics management sociology and politics as well as some engineering fields dealing with social activities This book includes selected papers presented at the Eighth International Workshop on Agent Based Approaches in Economic and Social Complex Systems held in Tokyo Japan in 2013 At the workshop 23 reviewed full papers were presented and of those 13 were selected to be included in this volume

Agent-Based Approaches in Economics and Social Complex Systems IX Utomo Sarjono Putro, Manabu Ichikawa, Manahan Siallagan, 2017-05-02 This book includes many cases that provide new perspectives in developing agent based modeling and simulation The real problems are complex and sophisticated methodology is needed to handle them Agent based modeling

and simulation is one methodology that provides a bottom up experimental approach applicable to social sciences such as economics management sociology and politics as well as some engineering fields dealing with social activities However to improve the applicability of agent based modeling and simulation methods a new perspective is needed In this book that new perspective is developed and utilized to deal with many cases of real world problems such as the supply chain land use and land cover transportation health services economics and social problems The cases are selected from papers presented at the Ninth International Workshop on Agent Based Approaches in Economic and Social Complex Systems held in Bali Indonesia in 2015 At the workshop 29 reviewed full papers were presented and of those 16 were selected to be included in this volume

Agent-Based Approaches in Economic and Social Complex Systems VII Tadahiko Murata,Takao Terano,Shingo Takahashi,2013-05-14 Agent based modeling simulation is an emergent approach to the analysis of social and economic systems It provides a bottom up experimental method to be applied to social sciences such as economics management sociology and politics as well as some engineering fields dealing with social activities This book includes selected papers presented at the Seventh International Workshop on Agent Based Approaches in Economic and Social Complex Systems held in Osaka Japan in 2012 At the workshop 24 reviewed full papers were presented and of those 17 were selected to be included in this volume The papers are divided into two groups as Fundamentals of Agent Based Modeling and Applications of Agent Based Modeling Agent-Based Modeling of Sustainable Behaviors Amparo Alonso-Betanzos,Noelia Sánchez-Marroño,Oscar Fontenla-Romero,J. Gary Polhill,Tony Craig,Javier Bajo,Juan Manuel Corchado,2017-01-06 Using the O D D Overview Design concepts Detail protocol this title explores the role of agent based modeling in predicting the feasibility of various approaches to sustainability The chapters incorporated in this volume consist of real case studies to illustrate the utility of agent based modeling and complexity theory in discovering a path to more efficient and sustainable lifestyles The topics covered within include households attitudes toward recycling designing decision trees for representing sustainable behaviors negotiation based parking allocation auction based traffic signal control and others This selection of papers will be of interest to social scientists who wish to learn more about agent based modeling as well as experts in the field of agent based modeling Multi-Agent and Multi-Agent-Based Simulation Paul Davidsson,Brian Logan,Keiki Takadama,2005-02-22 This volume presents revised and extended versions of selected papers presented at the Joint Workshop on Multi Agent and Multi Agent Based Simulation a workshop federated with the 3rd International Joint Conference on Autonomous Agents and Multiagent Systems AAMAS 2004 which was held in New York City USA July 19 23 2004 The workshop was in part a continuation of the International Workshop on Multi Agent Based Simulation MABS series vided versions of papers presented at the four previous MABS workshops have been published as volumes 1534 1979 2581 and 2927 in the Lecture Notes in Artificial Intelligence series The aim of the workshop was to provide a forum for work in both applications of multi agent based simulation and the technical challenges of simulating large multi agent systems MAS There has been considerable recent

progress in modelling and analyzing multi agent systems and in techniques that apply MAS models to complex real world systems such as social systems and organizations Simulation is an increasingly important strand that weaves together this work In high risk high cost situations simulations provide critical cost benefit leverage and make possible explorations that cannot be carried out in situ Multi agent approaches to simulating complex systems are key tools in interdisciplinary studies of social systems Agent based social simulation ABSS research simulates and synthesizes social behavior in order to understand real social systems with properties of self organization scalability robustness and openness In the MAS community simulation has been applied to a wider range of MAS research and design problems from models of complex individual agents employing sophisticated internal mechanisms to models of large scale societies of relatively simple agents which focus more on the interactions between agents

Skills Mismatch in the Labour Market Isha Mishra, 2020

How Do I Develop an Agent-Based Model? Secchi, Davide, 2022-04-21 This clear and coherent book introduces agent based modelling ABM to those who are not familiar with nor have been previously exposed to computational simulation Featuring examples cases and models the book illustrates how ABM can and should be considered as a useful approach and technique for the study of management and organisational systems

Agent-Based Models Nigel Gilbert, 2019-12-17 Agent based simulation has become increasingly popular as a modeling approach in the social sciences because it enables researchers to build models where individual entities and their interactions are directly represented The Second Edition of Nigel Gilbert's Agent Based Models introduces this technique considers a range of methodological and theoretical issues shows how to design an agent based model with a simple example offers some practical advice about developing verifying and validating agent based models and finally discusses how to plan an agent based modelling project publish the results and apply agent based modeling to formulate and evaluate social and economic policies A website to accompany the book includes a simulation using NetLogo

Design of Agent-based Models Tomáš Šalamon, 2011 Although there are plenty of publications dealing with the theory of multi agent systems and agent based simulations information about the practical development of such systems is scarce The aim of this book is to fill this empty space and to provide knowledge about design and development of agent based simulations in an easy and comprehensible way The book begins with the fundamentals of multi agent systems agent principles and their interaction and goes on to discuss the philosophy of agent based programming Agent based models like any other scientific method have drawbacks and limitations which are presented in the book as well The main portion of the text is then devoted to a description of methodology and best practices for the design and development of agent based simulation software The methodology called Agentology guides the reader through the entire development process from the formal definition of the problem through conceptual modeling and the selection of the particular development platform to the programming and debugging of the code itself and the final assessment of the model The visual language as the means of representation of the conceptual model is included The reader is also presented with a comparison

of present multi agent development environments and tools which could be helpful for the selection of appropriate development instruments Given that the theoretical foundation is presented in an accessible way and supported by many practical examples figures schemes and source codes this publication is especially suitable as a textbook for introductory graduate level courses on multi agent systems and agent based modeling Besides appealing to students and the scientific community the monograph can aid software architects and developers who are not familiar with agent principles conveying valuable insights into this distinct computer paradigm
