PACS A Guide to the Digital Revolution is a textbook of modern information sciences that fills an incredible need in a blossoming field of radiology. The emphasis is on a review of technological developments associated with the transition of radiology departments to filmless environments. Each chapter addresses the key topics in current literature with regard to the generation, transfer, interpretation, and distribution of images to the medical enterprise. As leaders in the field of computerized medical imaging, the editors and contributors provide insight into emerging technologies for physicians, administrators, and other interested groups. As health care organizations throughout the world begin to generate filmless implementation strategies, this exhaustive review will prove a vital aid to leaders in the development of health care.

Moody's Industrial Manual, 1959 *Merrill's Atlas of Radiographic Positioning and Procedures - E-Book* Bruce W. Long, Jeanne Hall Rollins, Barbara J. Smith, 2015-01-01. With more than 400 projections presented, Merrill's Atlas of Radiographic Positioning and Procedures remains the gold standard of radiographic positioning texts. Authors Eugene Frank Bruce Long and Barbara Smith have designed this comprehensive resource to be both an excellent textbook and also a superb clinical reference for practicing radiographers and physicians. You will learn how to properly position the patient so that the resulting radiograph provides the information needed to reach an accurate diagnosis. Complete information is included for the most common projections as well as for those less commonly requested. UNIQUE Collimation sizes and other key information are provided for each relevant projection. Comprehensive full color coverage of anatomy and positioning makes Merrill's Atlas the most in depth text and reference available for radiography students and practitioners. Coverage of common and unique positioning procedures includes special chapters on trauma, surgical radiography, geriatrics, pediatrics, and bone densitometry to help prepare you for the full scope of situations you will encounter. Numerous CT and MRI images enhance your comprehension of cross sectional anatomy and help you prepare for the Registry examination. Bulleted lists provide clear instructions on how to correctly position the patient and body part when performing procedures. Summary tables provide quick access to projection overviews, guides to anatomy, pathology tables for bone groups and body systems, and exposure technique charts. Frequently performed projections are identified with a special icon to help you focus on what you need to know as an entry level radiographer. Includes a unique new section on working with and positioning obese patients. Offers coverage of one new compensating filter. Provides collimation sizes and other key information for each relevant projection. Features more CT and MRI images to enhance your understanding of cross sectional anatomy and prepare you for the Registry exam. Offers additional digital images in each chapter including stitching for long length images of the spine and lower limb. Standardized image receptor sizes use English measurements with metric in parentheses. Depicts the newest equipment with updated photographs and images.

Digital (R)Evolution in Radiology Walter Hruby, 2013-06-29. Three decades have passed since my first personal experiences, influences, and contacts with computer applications in the field of medicine. These experiences were influenced by diverse presentations, publications, and seminars concerning various

applications of information technology as early as in 1970 Univac International Executive Centre Rome The first clinical proposals and discussions during the first World Congress of Intensive Care Medicine London 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology In 1975 when I started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology These two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology
