Agent Supported Cooperative Work Yiming Ye, E. Churchill, 2012-12-06 Improvements in computer networking have heralded great expectations for computer mediated distributed work However experience has revealed that as information flow improves a central problem for distributed workers is the administration management and control of that information Research into Computer Supported Cooperative Work CSCW investigates design methods and technologies for the support of collaboration communication and coordination of distributed group work both within and among organizations In tandem with this focus on the support of distributed communication and collaboration there have been exciting developments in the fields of Intelligent Agents and Distributed Artificial Intelligence DAI notably in the concepts theories and deployment of intelligent agents as a means of distributing computer based problem solving expertise The paradigm of multi agent systems forms a proposed basis for the design of CSCW architectures the support of CSCW operations and for addressing some of the problems of cooperative working The application of a multi agent approach to CSCW makes information exchange among the participants easier by delivering support to the participants assisting workflows and procedures and providing convenient user interfaces to CSCW systems Furthermore the ideas inherent in such an approach are also applicable to other domains such as support for interactive learning Organizations that seek to exploit the advantages offered through CSCW will benefit from the integration of agents in the management and use of their corporate knowledge especially with the advancement of wired or wireless networking pervasive computing and other information technologies Agent Supported Cooperative Work describes the state of the art in this exciting new area covering both theoretical foundations and practical applications of ASCW It is the first book explicitly dedicated to ASCW bringing together contributions from international experts in the field

Bordini, Mehdi Dastani, Jürgen Dix, Amal El Fallah Seghrouchni, 2005-07-29 Multi Agent Programming is an essential reference for anyone interested in the most up to date developments in MAS programming While previous research has focused on the development of formal and informal approaches to analyze and specify Multi Agent Systems this book focuses on the development of programming languages and tools which not only support MAS programming but also implement key concepts of MAS in a unified framework Part I describes approaches that rely on computational logic or process algebra Jason 3APL IMPACT and CLAIM SyMPA Part II presents languages and platforms that extend or are based on Java JADE Jadex and JACKTM Part III provides two significant industry specific applications The DEFECTO System for coordinating human agent teams for disaster response and the ARTIMIS rational dialogue agent technology Also featured are seven appendices for quick reference and comparison *An Application Science for Multi-Agent Systems* Thomas A. Wagner, 2006-04-11 An Application Science For Multi Agent Systems addresses the complexity of choosing which multi agent control technologies are appropriate for a given problem domain or a given

application Without such knowledge when faced with a new application domain agent developers must rely on past experience and intuition to determine whether a multi agent system is the right approach and if so how to structure the agents how to decompose the problem and how to coordinate the activities of the agents and so forth This unique collection of contributions written by leading international researchers in the agent community provides valuable insight into the issues of deciding which technique to apply and when it is appropriate to use them The contributions also discuss potential trade offs or caveats involved with each decision An Application Science For Multi Agent Systems is an excellent reference for anyone involved in developing multi agent systems

Autonomy Oriented Computing Jiming Liu,XiaoLong Jin,Kwok Ching Tsui,2006-07-02 Autonomy Oriented Computing is a comprehensive reference for scientists engineers and other professionals concerned with this promising development in computer science It can also be used as a text in graduate undergraduate programs in a broad range of computer related disciplines including Robotics and Automation Amorphous Computing Image Processing Programming Paradigms Computational Biology etc Part One describes the basic concepts and characteristics of an AOC system and enumerates the critical design and engineering issues faced in AOC system development Part Two gives detailed analyses of methodologies and case studies to evaluate AOC used in problem solving and complex system modeling The final chapter outlines possibilities for future research and development Numerous illustrative examples experimental case studies and exercises at the end of each chapter of Autonomy Oriented Computing help particularize and consolidate the methodologies and theories presented

Methodologies and Software Engineering for Agent Systems Federico Bergenti,Marie-Pierre Gleizes,Franco Zambonelli,2006-04-28 As information technologies become increasingly distributed and accessible to larger number of people and as commercial and government organizations are challenged to scale their applications and services to larger market shares while reducing costs there is demand for software methodologies and applications to provide the following features Richer application end to end functionality Reduction of human involvement in the design and deployment of the software Flexibility of software behaviour and Reuse and composition of existing software applications and systems in novel or adaptive ways When designing new distributed software systems the above broad requirements and their translation into implementations are typically addressed by partial complementarities and overlapping technologies and this situation gives rise to significant software engineering challenges Some of the challenges that may arise are determining the components that the distributed applications should contain organizing the application components and determining the assumptions that one needs to make in order to implement distributed scalable and flexible applications etc

Extending Web Services Technologies Lawrence Cavedon,Zakaria Maamar,David Martin,Boualem Benatallah,2006-03-30 Extending Web Services Technologies addresses the rapidly growing impact of Multi Agent Systems on web services tools and techniques In particular the book addresses the potential for MAS techniques to impact the difficult challenges that must be tackled for web services technology to realize its promises The area of web services offers

the multi agent community exciting research possibilities including similarities in system architectures powerful tools and a focus on issues such as trust and reliability Likewise techniques developed in the multi agent research community promise to have a strong impact on this fast growing technology The contents contain contributions by leading international researchers and professionals from both the web services and Multi Agent Systems community Topics include semantic web services and associated standards architectures integrating agents and services transactions authorization and service composition

Agent Intelligence Through Data Mining Andreas L. Symeonidis, Pericles A. Mitkas, 2006-05-06 Knowledge hidden in voluminous data repositories routinely created and maintained by today's applications can be extracted by data mining The next step is to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi agent systems Agent Intelligence Through Data Mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity This book contains a methodology tools and techniques and several examples of agent based applications developed with this approach This volume focuses mainly on the use of data mining for smarter more efficient agents Agent Intelligence Through Data Mining is designed for a professional audience of researchers and practitioners in industry This book is also suitable for graduate level students in computer science

Agent-Directed Simulation and Systems Engineering Levent Yilmaz, Tuncer Ören, 2009-11-04 The only book to present the synergy between modeling and simulation systems engineering and agent technologies expands the notion of agent based simulation to also deal with agent simulation and agent supported simulation Accessible to both practitioners and managers it systematically addresses designing and building agent systems from a systems engineering perspective

Designing Cooperative Systems Rose Dieng, 2000 The main assumption behind the COOP conferences is that co operative systems design requires a deep understanding of the co operative work of dyads groups and organizations involving both artefacts and social conventions The key topic of COOP 2000 was The Use of Theories and Models in Designing Cooperative Systems Two opposite methodological approaches to co operative system design can be clearly identified a pragmatic approach or an approach based on theories and models Objectives of the COOP 2000 Conference included clarifying the reasons why one needs or does not need to use a theory or a model for design comparing the pragmatic and the theory model based approaches and identifying possible joint points between them discussing the relevance of the theories models with respect to the design of co operative systems to better delimit the respective application fields of the various theories models and to identify their possible joint points

Distributed Sensor Networks Victor Lesser, Charles L. Ortiz Jr., Milind Tambe, 2012-12-06 Distributed Sensor Networks is the first book of its kind to examine solutions to this problem using ideas taken from the field of multiagent systems The field of multiagent systems has itself seen an exponential growth in the past decade and has developed a variety of techniques for distributed resource allocation Distributed Sensor Networks contains contributions from leading international researchers describing a

variety of approaches to this problem based on examples of implemented systems taken from a common distributed sensor network application each approach is motivated demonstrated and tested by way of a common challenge problem The book focuses on both practical systems and their theoretical analysis and is divided into three parts the first part describes the common sensor network challenge problem the second part explains the different technical approaches to the common challenge problem and the third part provides results on the formal analysis of a number of approaches taken to address the challenge problem
