Infrastructure for Agents, Multi-Agent Systems, and Scalable Multi-Agent Systems Tom Wagner, Omer F. Rana, 2003-08-06. Building research grade multi agent systems usually involves a broad variety of software infrastructure ingredients like planning, scheduling, coordination, communication, transport, simulation and module integration technologies and as such constitutes a great challenge to the individual researcher active in the area. The book presents a collection of papers on approaches that will help make deployed and large scale multi agent systems a reality. The first part focuses on available infrastructure and requirements for constructing research grade agents and multi agent systems. The second part deals with support in infrastructure and software development methods for multi agent systems that can directly support coordination and management of large multi agent communities. Performance analysis and scalability techniques are needed.

Intelligent Agents and Their Applications Zhengxin Chen,Nikhil Ichalkaranje,2013-03-20

Intelligent agents are one of the most promising business tools in our information rich world. An intelligent agent consists of a software system capable of performing intelligent tasks within a dynamic and unpredictable environment. They can be characterised by various attributes including autonomous, adaptive, collaborative, communicative, mobile and reactive. Many problems are not well defined and the information needed to make decisions is not available. These problems are not easy to solve using conventional computing approaches. Here the intelligent agent paradigm may play a major role in helping to solve these problems. This book, written for application researchers, covers a broad selection of research results that demonstrate in an authoritative and clear manner the applications of agents within our information society.
