A Survey Of Statistical Network Models A Survey Of Statistical Network Models:

A Survey of Statistical Network Models Anna Goldenberg, Alice X. Zheng, Stephen E. Fienberg, Edoardo M. Airolidi, 2010
Networks are ubiquitous in science and have become a focal point for discussion in everyday life. Formal statistical models for the analysis of network data have emerged as a major topic of interest in diverse areas of study and most of these involve a form of graphical representation. Probability models on graphs date back to 1959. Along with empirical studies in social psychology and sociology from the 1960s, these early works generated an active network community and a substantial literature in the 1970s. This effort moved into the statistical literature in the late 1970s and 1980s and the past decade has seen a burgeoning network literature in statistical physics and computer science. The growth of the World Wide Web and the emergence of online networking communities such as Facebook, MySpace and LinkedIn and a host of more specialized professional network communities has intensified interest in the study of networks and network data. Our goal in this review is to provide the reader with an entry point to this burgeoning literature. We begin with an overview of the historical development of statistical network modeling and then we introduce a number of examples that have been studied in the network literature. Our subsequent discussion focuses on a number of prominent static and dynamic network models and their interconnections. We emphasize formal model descriptions and pay special attention to the interpretation of parameters and their estimation. We end with a description of some open problems and challenges for machine learning and statistics.

Studying Social Networks Marina Hennig, Ulrik Brandes, Jürgen Pfeffer, Ines Mergel, 2012-09-10
Das Interesse an der Netzwerkanalyse nimmt rapide zu. Bisher fehlt es jedoch an empirisch orientierten Einführungen. Das interdisziplinäre Autorenteam führt daher praxisorientiert in die Grundlagen und Methoden der empirischen Analyse sozialer Netzwerke ein. Schritt für Schritt wird der Forschungsprozess von der Untersuchungsplanung über die Auswertungsmethodik bis zur Präsentation der Ergebnisse erläutert. Damit ist das Lehrbuch für den Einsatz in Lehre, Forschung und Praxis geeignet. This textbook provides an introduction to the process of empirical network research. In an action-oriented approach, it features explicated learning goals, numerous reference examples and exercises that facilitate successful learning. Integrating their different disciplinary perspectives, the authors address an interdisciplinary audience of teachers, researchers and practitioners alike.

Hard-to-Survey Populations Roger Tourangeau, Brad Edwards, Timothy P. Johnson, Kirk M. Wolter, Nancy Bates, 2014-08-28 Surveys are used extensively in psychology sociology and business as well as many other areas but they are becoming increasingly difficult to conduct Some segments of the population are hard to sample some are hard to find others

are hard to persuade to participate in surveys and still others are hard to interview This book offers the first systematic look at the populations and settings that make surveys hard to conduct and at the methods researchers use to meet these challenges It covers a wide range of populations immigrants persons with intellectual difficulties and political extremists and settings war zones homeless shelters that offer special problems or present unusual challenges for surveys The team of international contributors also addresses sampling strategies including methods such as respondent driven sampling and examines data collection strategies including advertising and other methods for engaging otherwise difficult populations
