Recent Progress In Atmospheric Sciences: Applications To The Asia-Pacific Region Kuo Nan Liou, Ming-dah

Chou, 2008-12-22 This book contains 22 peer reviewed articles that cover a spectrum of contemporary subjects relevant to atmospheric sciences with specific applications to the Asia Pacific region. The majority of these papers consist of a review of a scientific sub field in atmospheric sciences while some contain original contributions. All of the accepted papers were subject to scientific reviews and revisions. The book is divided into 2 traditional fields in atmospheric sciences: atmospheric dynamics and meteorology, and atmospheric physics and chemistry. The authors of these papers are distinguished alumni of the Department of Atmospheric Sciences at the National Taiwan University residing in the USA and Taiwan. This book is dedicated to the 50th anniversary of the Department of Atmospheric Sciences that occurred in 2004. Papers in atmospheric dynamics and meteorology cover the following subjects: El Niño, Southern Oscillation, air-sea interactions, convection in the tropics, mei-yu frontal systems, tropical cyclones, typhoons, data assimilations, and mesoscale modeling. In atmospheric physics and chemistry, subjects range from aerosols, clouds, interactions, heat budgets in the context of air-sea interactions, atmospheric radiative transfer, remote sensing of the oceans, Asian dust outbreaks, and clouds, reviews of cloud microphysics, and urban ozone formations to a satellite GPS system for typhoon studies and weather predictions. **3S Technology**

Applications in Meteorology Shuanggen Jin, 2023-10-19 Spatial information technology and its integration such as remote sensing, geographic information systems, GIS, and global navigation satellite systems, GNSS, known as 3S technology, have been extensively utilized in managing and monitoring natural disasters. This book illustrates the 3S integrated applications in the field of meteorology and promotes the role of 3S in developing precise and intelligent meteorology. It presents the principles of 3S technology and the methods for monitoring different meteorological disasters and hazards, as well as their application progress. The case studies from the United States, Japan, China, and Europe were conducted to help all countries understand the 3S technology functions in handling and monitoring severe meteorological hazards. **FEATURES** Presents integral observations from GNSS, GIS, and remote sensing in estimating and understanding meteorological changes. Explains how to monitor and retrieve atmospheric parameter changes using GNSS and remote sensing. Shows three-dimensional modelling and evaluations of meteorological variation processing based on GIS. Helps meteorologists develop and use space-air-ground integrated observations for meteorological applications. Illustrates the practices in monitoring meteorological hazards using space information techniques and case studies. This book is intended for academics, researchers, and postgraduate students who specialize in geomatics, atmospheric science, and meteorology, as well as scientists who work in remote sensing and meteorology, and professionals who deal with meteorological hazards. **Sounding the Troposphere**

from Space Peter Borrell, Patricia May Borrell, John P. Burrows, Ulrich Platt, 2012-02-02 It is now possible to determine concentrations of trace constituents and pollutants in the lower atmosphere from space, a development which heralds a new era for tropospheric chemistry. The authors describe how to develop and validate methods for determining tropospheric trace

constituents from satellite data to encourage the use of these data by atmospheric chemists and to explore the undoubted synergism which will develop between satellite and ground based measurements and will eventually give rise to a permanent observation system for the troposphere The book comprises several comprehensive overviews prepared by acknowledged experts in the field together with a series of individual reports from investigators whose work represents the cutting edge of the subject A variety of results giving global distributions of several species and their modelling are reported Most results stem from ESA satellite data but there is also an account of the North American work in this field which has mainly concentrated on global distributions of ozone It is fair to say that the field as it develops will revolutionize the way in which atmospheric chemistry is done This timely book provides a good introduction for anyone with an interest in the future of the troposphere

Quantitative Remote Sensing Jay Gao, 2024-11-12 This book provides comprehensive and in depth explanations of all topics related to quantitative remote sensing and its applications in terrestrial biospheric hydrospheric and atmospheric studies It elucidates how to retrieve quantitative information on a wide range of environmental parameters from various remote sensing data at the highest accuracy possible and expounds how different aspects of the target of remote sensing can be quantified using diverse analytical methods and level of accuracy Written in an easy to follow language logically organized and with step by step examples the book assists readers to deepen their understanding of the theory and cutting edge research on quantitative remote sensing Features Explains how to retrieve quantitative information on a wide range of environmental parameters from various tailored remote sensing data at the highest accuracy possible Manifests the author's decades of teaching and research in quantitative remote sensing and approaches the subject from both theoretical and pragmatic perspectives informed by the latest research outcomes Includes practical and real life examples to illustrate how the quantitative information on a target can be retrieved from a given type of remote sensing data Focuses on the latest developments in the field of quantitative remote sensing Introduces sufficient mathematical concepts to reveal how remotely sensed data are converted to quantitative information while providing quality assurance of the retrieved results This is a suitable textbook for upper level undergraduate or postgraduate students and serves as a handy and valuable reference for professionals working in monitoring the environment By reading this book readers gain a sound understanding of how to retrieve quantitative information on the environment from diverse remote sensing data using the most appropriate cutting edge methods and software

Mineral Dust Peter Knippertz, Jan-Berend W. Stuut, 2014-09-01 This volume presents state of the art research about mineral dust including results from field campaigns satellite observations laboratory studies computer modelling and theoretical studies Dust research is a new dynamic and fast growing area of science and due to its multiple roles in the Earth system dust has become a fascinating topic for many scientific disciplines Aspects of dust research covered in this book reach from timescales of minutes as with dust devils cloud processes and radiation to millennia as with loess formation and oceanic sediments making dust both a player and recorder of environmental change The book is structured in four main parts that explore characteristics of dust the global dust cycle impacts of dust on the Earth system and dust as a climate indicator The chapters in these parts provide a comprehensive detailed overview of this highly interdisciplinary subject The contributions presented here cover dust from source to sink and describe all the processes dust particles undergo while travelling through the atmosphere Chapters explore how dust is lifted and transported how it affects radiation clouds regional circulations precipitation and chemical processes in the atmosphere and how it deteriorates air quality The book explores how dust is removed from the atmosphere by gravitational settling turbulence or precipitation how iron contained in dust fertilizes terrestrial and marine ecosystems and about the role that dust plays in human health We learn how dust is observed simulated using computer models and forecast The book also details the role of dust deposits for climate reconstructions Scientific observations and results are presented along with numerous illustrations This work has an interdisciplinary appeal and will engage scholars in geology geography chemistry meteorology and physics amongst others with an interest in the

Earth system and environmental change body *International Aerospace Abstracts* ,1999 **Satellite Aerosol Remote Sensing Over Land** Alexander A. Kokhanovsky, Gerrit de Leeuw, 2009-08-24 Aerosols have a significant influence on the Earth's radiation budget but there is considerable uncertainty about the magnitude of their effect on the Earth's climate. Currently satellite remote sensing is being increasingly utilized to improve our understanding of the effect of atmospheric aerosols on the climate system. Satellite Aerosol Remote Sensing Over Land is the only book that brings together in one volume the most up to date research and advances in this discipline. As well as describing the current academic theory the book presents practical applications utilizing state of the art instrumentation invaluable to the work of environmental scientists. With contributions by an international group of experts and leaders of correspondent aerosol retrieval groups the book is an essential tool for all those working in the field of climate change.

Geospatial Technologies for Resource Planning and Management Chandra Shekhar Jha, Ashish Pandey, V.M. Chowdary, Vijay Singh, 2022-05-24 This book focuses on the application of geospatial technologies for resource planning and management for the key natural resources e.g. water, agriculture and forest as well as the decision support system DSS for infrastructure development. We have seen in the past four decades that the growing complexities of sustainable management of natural resources management have been very challenging. The book has been written to leverage the current geospatial technologies that integrate the remotely sensed data available from various platforms, the precise locational data providing geospatial intelligence and the advanced integration tools of Geographical Information Systems (GIS). Geospatial technologies have been used for water resources management employing geomorphological characteristics analysis of river migration pattern, understanding the large scale hydrological process, wet land classification and monitoring, analysis of glacial lake outburst flood (GLOF), assessment of environmental flow and soil erosion studies, water quality modelling and assessment and rejuvenation of paleochannels through groundwater recharge. Geospatial technologies have been applied for crop classification and mapping, soil moisture determination using RISAT-1 C band and PALSAR-2 L band sensors, inventory of horticulture plantations, management of citrus orchards, crop yield forecasting, rice yield estimation, estimation of evapotranspiration and its evaluation against lysimeter and satellite based evapotranspiration product for India to address the various issues of the agricultural system management. Geospatial technologies have been used for generation of digital elevation model, urban dynamics assessment, mobile GIS application at grass root level, planning, cadastral level, developmental planning and e-governance applications, system dynamics for sustainable development, micro level water resources planning, site suitability for sewage treatment plant, traffic density assessment, geographical indications of India, archaeological applications and disasters interventions to elaborate various issues of DSS for infrastructure development and management. Geospatial technologies have been employed for the generation and reconciliation of the notified forest land boundaries and also the land cover changes analysis within notified forest areas, forest resource assessment, management and monitoring and wildlife conservation and

management This book aims to present high quality technical case studies representing the recent developments in the application of geospatial technologies for resource planning and management The editors hope that this book will serve as a valuable resource for scientists and researchers to plan and manage land and water resources sustainably Meteorological and Geostrophysical Abstracts ,1997 **Monthly Weather Review** ,1991
