Affect Regulation Origin Self Neurobiology:

Affect Regulation and the Origin of the Self Allan N. Schore, 2015-11-19 For over three decades Allan N Schore has authored numerous volumes chapters and articles on regulation theory a biopsychosocial model of the development psychopathogenesis and treatment of the implicit subjective self The theory is grounded in the integration of psychology psychiatry and neuroscience and it is now being used by both clinicians to update psychotherapeutic models and by researchers to generate research First published in 1994 this pioneering volume represented the inaugural expression of his interdisciplinary model and has since been hailed by a number of scientific and clinical disciplines as a groundbreaking and paradigm shifting work This volume appeared at a time when the problem of emotion ignored for most of the last century was finally beginning to be addressed by science including the emergent field of affective neuroscience After a century of the dominance of the verbal left brain it presented a detailed characterization of the early developing right brain and its unique social emotional and survival functions not only in infancy but across all later stages of the human life span It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind *Affect Regulation and the Origin of the Self* acts as a keystone and foundation for all of Schore's later writings as every subsequent book article and chapter that followed represented expansions of this seminal work ***Affect Regulation and the Origin of the Self***, 2002

The Neurobiology-Psychotherapy-Pharmacology Intervention Triangle João G. Pereira, Jorge Gonçalves, Valeria Bizzari, 2019-05-30 This book intends to open the debate between three main aspects of clinical practice psychotherapy including psychological and philosophical influences neurobiology and pharmacology These three main themes are clinically applied in what we call the Intervention Triangle The book will first focus on epistemologically distinct frameworks and gradually attempt to consider the integration of these three fundamental vertexes of practice These vertexes are substantially unbalanced in the mental health field and thus this book tries to make sense of this phenomenon Unique in its interdisciplinary and comprehensive view of mental health problems and approaches this book offers a new perspective on unidisciplinary integration that previous publications have not considered As an innovative contribution to its field this volume will be particularly relevant to practitioners working towards integrative frameworks It will also be of interest to students clinicians and researchers in particular those working in psychology medicine psychiatry philosophy social work and pharmacy *Emotional Development in Psychoanalysis, Attachment Theory and Neuroscience* Viviane Green, 2004-03 This book gives a multi disciplinary overview of the psychological and emotional development of children from infancy to adulthood *Play Therapy* David A. Neurobiological Foundations for EMDR Practice Uri Bergmann, 2012-05-21

This volume introduces the most current research about the neural underpinnings of consciousness and EMDR eye movement desensitization and reprocessing in regard to attachment traumatic stress and dissociation. It is the first book to comprehensively integrate new findings in information processing, consciousness, traumatic disorders of information processing, chronic trauma and autoimmune compromises, and the implications of these data on the Adaptive Information Processing (AIP) model and EMDR treatment. The text examines online wakeful information processing including sensation perception, somatosensory integration, cognition, memory, language and motricity, and off-line sleep information processing such as slow wave sleep and cognitive memorial processing as well as REM dream sleep and its function in emotional memory processing. The volume also addresses disorders of consciousness including coma, anesthesia, and other neurological disorders, particularly disorders of Type 1 PTSD, complex PTSD, dissociative disorders, and personality disorders. It delves into chronic trauma and autoimmune function especially in regard to diseases of unknown origin and examines them from the perspective of autoimmune compromises resulting from the unusual neuroendocrine profile of PTSD sufferers. The final section integrates all material to illustrate the tenets of the AIP model and the implication of this material with respect to current EMDR treatment as well as techniques to render it more robust.

Key Features: Provides a neurobiological foundation that informs our understanding of human development, disorders of attachment, and information processing. Examines biological underpinnings of EMDR and other psychotherapeutic modalities regarding successful treatment outcomes for attachment stress and dissociation. Offers the latest research in neurosciences relevant to attachment, traumatic stress, and dissociation. Explicates disorders as outcomes of chronically dysregulated evolutionarily based biological action systems. Illustrates EMDR's sensorial input to the brain as a neural catalyst that can facilitate repair of dysfunctional neural circuitry. Includes illustrative neural maps.

Attachment Assessment in treatments, prevention and intervention programs Silvia Salcuni, 2015-05-13

Attachment theory, assessment, and research offers a broad far-reaching view of human functioning and it can enrich a psychologist's understanding of subjects and their relational adjustment both in clinical and non-clinical settings. Ongoing research in attachment has led to a number of individual treatments and prevention and intervention programs. The assessment of an individual's attachment organization can play a crucial role in explaining and previewing the unfolding treatment, the relational adjustments or concerns, and the psychological well-being. We hope to receive empirical papers that give evidence for the usefulness of attachment assessment in both clinical e.g. patients with Eating Disorder or Axis II psychotherapy patients or non-clinical population e.g. Adoptive and/or foster families or couples. Mother-infant assessment in prevention field. These papers should include methodological issues and information about the participants, the methods used to assess attachment, the process of scorer training, and the availability of the manual used to obtain inter-scorer reliability.

Case studies may be of interest to the extent that they demonstrate the value of a systematic approach to attachment material. A range of theoretical perspectives is welcome as well presentation of new emergent tools on attachment. Because *Frontiers in Psychology* is an international journal each empirical paper should comment on the international implications of the findings and discuss its cross cultural use. Such comments may include for example its linguistic specificity its robustness in translation and the cross cultural generalizability of the constructs and behaviors of the measure and its usual correlates. Cross cultural generalizability is not however a requirement.

Attachment-Focused Trauma Treatment for Children and Adolescents Niki Gomez-Perales, 2015-06-05 *Attachment Focused Trauma Treatment for Children and Adolescents* brings together two powerful treatment directions that exponentially expand the knowledge and skills available to child and adolescent trauma therapists. The book provides theoretical knowledge clinical approaches and specific detailed techniques that clinicians will find indispensable in the treatment of the most challenging and high risk young trauma victims. Also included are case studies developed from over three decades of experience that show the reader how to use the techniques in real life settings. The treatment approach described here is flexible enough to adapt to real clients in the real world regardless of trauma and attachment histories family and living situations or difficulties engaging in supportive therapeutic relationships. Clear and cohesive the model presented here allows room for the individuality and approach of each therapist so that the therapeutic relationship can evolve in a genuine and unique way. An appendix of photocopyable worksheets gives interactive tools for therapists to immediately use with clients.

Ferenczi's Confusion of Tongues Theory of Trauma Arnold Rachman, Clara Mucci, 2023-09-07 Arnold Wm Rachman and Clara Mucci provide a detailed examination of the significance of Sándor Ferenczi's paradigm shifting theory of trauma the Confusion of Tongues and confirm its relevance for the psychoanalytic theory and analysis of trauma today. As the first alternative to Freud's theory of the Oedipal complex Ferenczi's Confusion of Tongues theory expanded the theoretical and clinical boundaries of psychoanalysis to establish that psychological trauma as a result of childhood sexual abuse and trauma experiences are a significant contributing factor to the development of psychological disorders. The authors address the lack of attention paid to the significance of sexual abuse trauma to understanding psychological ill health in psychoanalysis and integrate the latest research on neurobiology to demonstrate how Ferenczi's theory is meaningful to understanding many aspects of human behavior today. This work will be formative to psychoanalysts and psychotherapists both in training and in practice and provide renewed insight into the treatment of childhood sexual abuse and psychological trauma.

Evolution, Early Experience and Human Development Darcia Narváez, 2012-11-29 The field of cognitive

psychology has expanded rapidly in recent years with experts in affective and cognitive neuroscience revealing more about mammalian brain function than ever before. In contrast, psychological problems such as ADHD, autism, anxiety, and depression are on the rise, as are medical conditions such as diabetes, obesity, and autoimmune disorders. Why, in this era of unprecedented scientific self-knowledge, does there seem to be so much uncertainty about what human beings need for optimal development? *Evolution, Early Experience, and Human Development* asserts that human development is being misshaped by government policies, social practices, and public beliefs that fail to consider basic human needs. In this pioneering volume, scientists from a range of disciplines theorize that the increase in conditions such as depression and obesity can be partially attributed to a disparity between the environments and conditions under which our mammalian brains currently develop and our evolutionary heritage. For example, healthy brain and emotional development depends to a significant extent upon caregiver availability and quality of care. These include practices such as breastfeeding, co-sleeping, and parental social support, which have waned in modern society but nevertheless may be integral to healthy development. As the authors argue, without a more informed appreciation of the ideal conditions under which human brains and minds develop and function, human beings will continue to struggle with suboptimal mental and physical health, and as problems emerge, psychological treatments alone will not be effective. The best approach is to recognize these needs at the outset so as to optimize child development. *Evolution, Early Experience, and Human Development* puts forth a logical, empirically based argument regarding human/mammalian needs for optimal development based on research from anthropology, neurobiology, animal science, and human development. The result is a unique exploration of evolutionary approaches to human behavior that will support the advancement of new policies, new attitudes towards health, and alterations in childcare practices that will better promote healthy human development.
