

APPLICATIONS OF FIXED POINT THEORY IN HILBERT SPACES

KIRAN DEWANGAN

ABSTRACT. In the presented paper, the first section contains strong convergence and demiclosedness property of a sequence generated by Karakaya et al. iteration scheme in a Hilbert space for quasi-nonexpansive mappings and also the comparison between the iteration scheme given by Karakaya et al. with well-known iteration schemes for the convergence rate. The second section contains some applications of the fixed point theory in solution of different mathematical problems.

1. Introduction

Fixed point theory plays an important role not only in the field of analysis, but also used to find out solutions of different problems like integral equations, differential equations, convex minimization problems, image recovery, signal processing (refer to [7, 8, 23]) etc.

There are lots of fixed point results in different spaces. One of the most important and fruitful result in a metric space was given by Banach [5] called "Banach Contraction Principle". This principle was further generalized and its several variants were studied by mathematicians over different spaces.

Let X be a Hilbert space and K be a non-empty subset of X . A point $x \in X$ is called a fixed point of a mapping $T : X \rightarrow X$ if $T(x) = x$. Through-out the literature, $F(T)$ denotes the set of fixed points of T , that is, $F(T) = \{x \in X : Tx = x\}$. Note that a mapping $T : K \rightarrow K$ is called

- (i) Lipschitz if $\|Tx - Ty\| \leq L\|x - y\|$, for all $x, y \in K$, where $L > 0$.
- (ii) contraction if $\|Tx - Ty\| \leq L\|x - y\|$, for all $x, y \in K$, where $0 < L < 1$.
- (iii) nonexpansive if $\|Tx - Ty\| \leq \|x - y\|$, for all $x, y \in K$ and $L = 1$.

Note that the Banach contraction principle is no longer true for nonexpansive mappings. The study of fixed points of mappings with certain contraction condition attract many researcher, but nonexpansive mapping has also an important role in fixed point theory. The study of nonexpansive mappings were basically motivated by Browder's [6] work on relationship between monotone operators and nonexpansive
