Benavente,J. -N. Volff,2009 Meiosis is a key event in the life of all sexually reproductive organisms As a consequence of recombination and segregation of maternal and paternal sets of chromosomes it represents the largest natural source of genetic variability The field of meiosis research is expanding rapidly with significant progress resulting from the use of suitable model systems as well as from the identification and characterization of proteins many of them meiosis specific which play a key role during meiotic events This volume provides the reader with a series of authoritative review articles summarizing some of the most recent advances in the field of meiosis research Most of the more commonly used model systems are investigated taking the comparative aspects into account Written by leading experts in the field the book is a valuable reference for researchers and graduate students in genetics cell and developmental biology reproductive biology and andrology Lloyd's Register of British and Foreign Shipping ,1878 Seismic Attributes for Prospect Identification and Reservoir Characterization Satinder Chopra,K. J. Marfurt,2007 Introducing the physical basis mathematical implementation and geologic expression of modern volumetric attributes including coherence dip azimuth curvature amplitude gradients seismic textures and spectral decomposition the authors demonstrate the importance of effective color display and sensitivity to seismic acquisition and processing Seismic attributes

play a key role in exploration and exploitation of hydrocarbons In *Seismic Attributes for Prospect Identification and Reservoir Characterization* SEG Geophysical Developments No 11 the authors introduce the physical basis mathematical implementation and geologic expression of modern volumetric attributes including coherence dip azimuth curvature amplitude gradients seismic textures and spectral decomposition The authors demonstrate the importance of effective color display and sensitivity to seismic acquisition and processing Examples from different basins illustrate the attribute expression of tectonic deformation clastic depositional systems carbonate depositional systems and diagenesis drilling hazards and reservoir characterization The book is illustrated generously with color figures throughout *Seismic Attributes* will appeal to seismic interpreters who want to extract more information from data seismic processors and imagers who want to learn how their efforts impact subtle stratigraphic and fracture plays sedimentologists stratigraphers and structural geologists who use large 3D seismic volumes to interpret their plays within a regional basinwide context and reservoir engineers whose work is based on detailed 3D reservoir models Copublished with EAGE

Sequential Intelligent Dynamic System Modeling and Control Hai-Jun Rong,Zhao-Xu Yang,2024-07-05 The book offers novel research results of sequential intelligent dynamic system modeling and control in a unified framework from theory proposals to real applications It covers an in depth study of various learning algorithms for the permanent adaptation of intelligent model parameters as well as of structural parts of the model The comprehensive researches on sequential fuzzy and neural controller design schemes for some complex real applications are included This is particularly suited for readers who are interested to learn practical solutions for controlling nonlinear systems that are uncertain and varied at any time In addition the organization of the book from addressing fundamental concepts and presenting novel intelligent models to solving real applications is one of the major features of the book which makes it a valuable resource for both beginners and researchers wanting to further their understanding and study about realtime online intelligent modeling and control of nonlinear dynamic systems The book can benefit researchers engineers and graduate students in the fields of control engineering artificial intelligence computational intelligence intelligent control nonlinear system modeling and control etc

emerges as a pivotal player in data mining and machine learning At its core clustering seeks to unveil heterogeneous groups within unlabeled data representing a crucial unsupervised task in machine learning The objective is to automatically assign labels to each unlabeled datum with minimal human intervention Analyzing this data allows for categorization and drawing conclusions applicable across diverse application domains The challenge with unlabeled data lies in defining a quantifiable goal to guide the model building process constituting the central theme of clustering This book presents concepts and different methodologies of data clustering For example deep clustering of images semi supervised deep clustering deep multi view clustering etc This book can be used as a reference for researchers and postgraduate students in related research background

Diagnostic Imaging in Medicine Richard C. Reba, David J. Goodenough, H.F. Davidson, 2012-12-06 An Advanced Study Institute on Ultrasonics in Medical Diagnosis was held in Milan Italy from 10 to 15 June 1974 This ASI was of a short five day duration and limited to cardiac diagnosis by ultra sound only Since that time the field of diagnostic imaging in medicine has literally exploded with new and improved means of medical diagnosis such as computed tomography microwaves nuclear magnetic resonance and other sophisticated techniques These developments have enabled medical practitioners to make diagnoses with a minimum of danger to the patient and a maximum of accuracy never before possible and represent a multi quantum advance over the early state of the art presented at the 1974 ASI Since then several meetings have taken place on these individual topics to bring together experts who presented their latest research results but none have discussed the entire field of diagnostic imaging in medicine in one meeting nor have they had the teaching character of an Advanced Study Institute The art and science of medicine have been altered repeatedly during the eight year interval since the last ASI Today s clinician must be part technologist and must be enough of an investigator to understand and appreciate the scientific method The current complex advances in instrumentation and pharmacology have had a marked effect on how medicine is practiced There was therefore an urgent need to bring the entire field of imaging in medicine to one teaching podium where the many advances of the last six or seven years could be reviewed
