Angiogenesis And Direct Myocardial Revascularization Contemporary Cardiology:

Angiogenesis and Direct Myocardial Revascularization Roger J. Laham, Donald S. Baim, 2007-11-05 An interdisciplinary panel of pioneers and opinion leaders review the basic preclinical clinical and developmental pathways to new treatment strategies such as therapeutic angiogenesis and myogenesis The authors take advantage of new biological understanding novel therapeutic targets multiple available and well studied therapeutic strategies and the necessary imaging techniques to measure outcomes Their in depth discussions cover the identification of new therapeutic targets and pathways the investigation of transcriptional factors master switch molecules cell based approaches chemokines a better understanding of the effects of aging endothelial dysfunction and hypercholesterolemia in response to angiogenic stimuli Highlights include examination of drug delivery problems outcomes measure stem therapy high risk interventions development pathways and future possibilities *Handbook of Complex Percutaneous Carotid Intervention* Jacqueline Saw, Jose Exaire, David S. Lee, Sanjay Yadav, 2008-08-17 This handbook supplements hands on training in interventional cardiology with a specific focus on percutaneous intervention in patients with extracranial carotid artery stenosis It carries reviews of landmark studies supporting carotid endarterectomy and stenting and is a comprehensive guide to this exciting and burgeoning field *Cardiovascular Magnetic Resonance Imaging* Raymond Y. Kwong, 2008-03-19 Cardiac Magnetic Resonance Imaging CMR is a rapidly evolving tool This book presents a state of the art compilation of expert contributions to the field each examining normal and pathologic anatomy of the cardiovascular system as assessed by magnetic resonance imaging Functional techniques such as myocardial perfusion imaging and assessment of flow velocity are emphasized The book represents a multi disciplinary approach to the field *Stem Cells and Myocardial Regeneration* Marc S. Penn, 2007-11-06 Over the past 5 years there has been great excitement and controversy in the scientific financial and lay literature for the potential of stem cell based strategies for the prevention and treatment of chronic heart failure CHF Not that long ago we believed we were born with a set number of cardiac myocytes and that once damaged there was no hope to replace them The interest in the field stems from the magnitude of cardiovascular disease in the world Our ability to treat and help patients survive acute myocardial infarction MI has resulted in a near epidemic of CHF There are more than 5 million Americans who currently carry the diagnosis of CHF With more than 1 million MIs a year in the United States there are approx 500 000 new cases of CHF diagnosed each year The goal of Stem Cells and Myocardial Regeneration is to present in a coherent manner the current state of knowledge of stem cell based therapies for cardiac dysfunction including current findings in both the laboratory and the clinic trials The first section of this Stem Cells and Myocardial Regeneration focuses on the magnitude of the problem and the successes and failures of what we consider optimal medical therapy It is on this background that stem cell based therapy needs to build **Cardiac Rehabilitation** William Kraus, Steven Keteyian, 2007-06-15 The era of cardiac rehabilitation in the United States dates back at least thirty years when Herman

Hellerstein at Case Western Reserve Andy Wallace at Duke and Ken Cooper in Dallas envisioned that a comprehensive lifestyle approach to the rehabilitation and prevention of patients having had a cardiac event would potentially yield great benefits for the individual patient and the health care system Until that time the thought of vigorous exercise in the cardiac patient soon after an event was close to anathema One of us WEK was introduced to Herman Hellerstein in Cleveland in the late 1960 s when his father sought medical opinion from him for a cardiac condition WEK was introduced to Andy Wallace in 1979 by which time the latter had started a multidisciplinary geographically regional cardiac rehabilitation program at Duke based upon consultations with Hellerstein and Cooper By then cardiac rehabilitation was progressing beyond the vision of exercise only and since then the concept of cardiac rehabilitation has grown into the comprehensive multidisciplinary program that we know today and that we attempt to describe in this volume The practice of cardiac rehabilitation has grown and metamorphosed in the last thirty years in parallel with the growth and metamorphosis of the practice of cardiovascular medicine During the formative stages of cardiac rehabilitation the use of coronary care units was in its infancy The coronary artery bypass operation was less than ten years old The LIMA bypass had not been invented Interventional Cardiology Howard C. Herrmann, 2007-10-28 A comprehensive survey of nonsurgical treatment for a variety of heart diseases that affect the cardiac valves the heart muscle and the structure of the heart The authors describe who these procedures are useful for how to do them and how well they work Major topics of discussion include percutaneous techniques for valvular heart disease septal defects at both the atrial and ventricular levels adjunctive therapies during coronary interventions and angioplasty to treat extracardiac vascular disease as well as reviews of the cutting edge imaging modalities now being used in interventional procedures An accompanying CD ROM contains video demonstrations of catheterization and the imaging portions of these procedures Essentials of Restenosis Henricus J. Duckers, Elizabeth G. Nabel, Patrick W. Serruys, 2007-11-13 Leading interventional cardiologists including Patrick Serruys Eric Topol David Holmes Thomas Luscher and others provide the gold standard reference on the treatment of restenosis coronary artery blockage for interventional cardiologists Dr Serruys who pioneered the use of drug eluting stents and other pioneers in the field cover everything from non invasive imaging to eluting stents to brachytherapy through to the latest molecular biology based treatments including antisense stem cells and gene therapy making this an essential reference for all interventional cardiologists Nuclear Cardiology, The Basics Frans J Th Wackers, Wendy Bruni, Barry Zaret, 2007-12-26 The purpose of this updated book is to provide the outline for the nuts and bolts establishment and operation of a nuclear cardiology laboratory In so doing the authors have attempted to deal with the relevant issues that a laboratory director must address in either setting up the laboratory or maintaining its competitive edge and clinical competence over time The authors primarily attempted to identify issues related to outpatient imaging facilities However where appropriate issues related to inpatients in hospital based laboratories are also discussed In this new edition the authors have kept the basic format established in the first edition In

addition to reviewing modifying and updating each chapter in the first edition they have added entirely new chapters on PET imaging hybrid imaging and the clinical appropriateness of nuclear cardiology procedures

Preventive Cardiology Jo Anne Micale Foody, 2007-11-03 Preventive cardiology is a fast moving field that places emphasis on the prevention and treatment of coronary disease Preventive Cardiology Insights Into the Prevention and Treatment of Cardiovascular Disease Second Edition is intended for clinical cardiologists internists primary care providers and allied health care professionals who wish to extend their knowledge and expertise in the rapidly expanding field of preventive cardiology It is the mission of this book to provide clinicians with the understanding and tools necessary to implement prevention in their daily practices Recent changes in the delivery of health care in the United States and abroad in conjunction with new scientific evidence supporting the role of preventive strategies in the maintenance of cardiovascular health have focused new attention and efforts on the field of cardiovascular disease prevention The field of cardiology is thus making a gradual transition from the technology driven intervention oriented perspective of the last several decades to a new preventive molecular based perspective As fresh evidence amasses that preventive measures produce a considerable decrease in the incidence of both primary and secondary cardiac events and mortality there is growing widespread acknowledgment that health care providers from all arenas must initiate preventive strategies in the management and care of their patients

Cardiopulmonary Resuscitation Joseph P. Ornato, Mary Ann Peberdy, 2007-11-15 An in depth review by leading authorities of the latest therapies and techniques for rescuing persons in cardiac arrest The authors explore the physiology behind current state of the art clinical resuscitation and translate it into practical bedside recommendations clinical tips and expert techniques Topics of interest include the epidemiology of sudden death management of ventilation chest compression technique training public access defibrillation drug delivery during CPR the latest drug therapies and cardiac arrest in disease pregnancy drowning lightning strike and trauma The authors also review the major ongoing research in resuscitation science that will likely affect the next set of international resuscitation guidelines

Cardiovascular MRI Peter G. Danias, 2008-04-06 Cardiac Magnetic Resonance CMR is a rapidly evolving imaging technology and is now increasingly utilized in patient care Its advantages are noninvasiveness superb image resolutions and body tissue characterization CMR is now an essential part of both cardiology and radiology training and has become part of the examination for Board certification This book provides a condensed but comprehensive and reader friendly educational tool for cardiology fellows and radiology residents It contains multiple choice questions similar to board examinations with concise comment and explanation about the correct answer

The Art and Science of Cardiac Physical Examination Narasimhan Ranganathan, Vahe Sivaciyan, Franklin B. Saksena, 2007-11-10 It has been our experience that instruction in physical examination of the heart in medical schools has been deteriorating since the advent of such modern diagnostic tools as two dimensional echocardiography and nuclear imaging At best the teaching has been sketchy and too superficial for the student to appreciate the pathophysiological correlates Both invasive and the noninvasive modern technologies have contributed substantially to our knowledge and understanding of cardiac physical signs and their pathophysiological correlates However both students and teachers alike appear to be mesmerized by technological advances to the neglect of the age old art as well as the substantial body of science of cardiac physical examination It is also sad to see reputed journals give low priority to articles related to the clinical examination Our experience is substantiated by a nationwide survey of internal medicine and cardiology training programs which concluded that the teaching and practice of cardiac auscultation received low emphasis and perhaps other bedside diagnostic skills as well 1 The state of the problem is well reflected in the concerns expressed in previous publications 2 4 including the 2001 editorial in the American Journal of Medicine Vol 110 pp 233 235 entitled Cardiac auscultation and teaching rounds how can cardiac auscultation be resuscitated as well as in the rebuttal Selections from current literature Horton hears a Who but no murmurs does it matter 5

Diabetes and Cardiovascular Disease Michael T. Johnstone, Aristidis Veves, 2007-10-28 The cause of diabetes mellitus is metabolic in origin However its major clinical manifestations which result in most of the morbidity and mortality are a result of its vascular pathology In fact the American Heart Association has recently stated that from the point of view of cardiovascular medicine it may be appropriate to say diabetes is a cardiovascular disease 1 But diabetic vascular disease is not limited to just the macrovasculature Diabetes mellitus also affects the microcirculation with devastating results including nephropathy neuropathy and retinopathy Diabetic nephropathy is the leading cause of end stage renal disease in the United States while diabetic retinopathy is the leading cause of new onset blindness in working age Americans The importance of this text on Diabetes and Cardiovascular Disease is evident by the magnitude of the population affected by diabetes mellitus Over 10 million Americans have been diagnosed with diabetes mellitus while another 5 million remain undiagnosed The impact from a public health perspective is huge and increasing As the population of the United States grows older more sedentary and obese the risk of developing diabetes and its complications will increase Epidemiological studies have identified diabetes mellitus as a major independent risk factor for cardiovascular disease Over 65% of patients with diabetes mellitus die from a cardiovascular cause The prognosis of patients with diabetes mellitus who develop overt clinical cardiovascular disease is much worse than those cardiovascular patients free of diabetes mellitus
