Koziol, 2014-07-08 Executive functioning we measure it assess it document its development in youth track its decline in age and use it as a basis for diagnoses treatment planning and of course theories Could it be possible that science has spent decades chasing a cognitive phantom Noting the lack of consensus concerning definition component skills and location within the brain The Myth of Executive Functioning calls basic assumptions prominent theories commonly used test methods and even the phrase executive functioning into question The book s deceptively simple argument takes an evolutionary neuroscience look at the cornerstones of cognitive organization including memory planning decision making and adaptation to novel circumstances From there gaps are identified between systems of cognitive control and those behaviors that are evaluated in neuropsychological testing gaps that contribute to the disconnect between how science views mind and body brain and behavior The author s problem solving metaphor places new emphasis on stimulus processing and on the relationship between movement and thought as he offers thought provoking perspectives on The limits of neuropsychological constructs The components of adaptive thinking The automatic aspects of problem solving The left brain right brain dichotomy Problems with the domain approach to cognition New paradigms for testing cognitive functioning A controversial presentation with the potential to change clinical practice and training The Myth of Executive Functioning will be read debated and learned from by neuropsychologists clinical psychologists psychiatrists cognitive neuroscientists and rehabilitation specialists **The Behavioral and Cognitive Neurology of Stroke** Olivier

Apraxia Leslie J. Gonzalez Rothi, Kenneth M. Heilman, 2014-06-03 The purpose of this book is to provide the reader with a perspective on apraxia that considers a link between the pathology of apraxia and normal motor skill. In addition, it is the intention of the authors to provide information that is theoretically interesting as well as clinically applicable. The book is a collection of papers by various authors working in the area of apraxia almost exclusively with limb apraxia specifically. Beginning with Hugo Liepmann's work of the late 19th century, a cognitive neuropsychological model of limb apraxia is reviewed. The use of new technologies that are informative about the mechanisms of limb praxis are discussed and issues related to research as well as clinical assessment management of the disorder are provided. While acquired limb apraxia is the focus of the book, there are also chapters on handedness, developmental apraxia of speech and disorders of handwriting.

Control of Cognitive Processes Stephen Monsell, Jon Driver, 2000 The thirty-two contributions discuss evidence from psychological experiments with healthy and brain-damaged subjects, functional imaging, electrophysiology and computational modeling. The Handbook of Clinical Neuropsychology Jennifer Gurd, Udo Kischka, John Marshall, 2012-01-12 Clinical neuropsychology remains one of the fastest growing specialities within clinical psychology, neurology and the psychiatric disciplines. This second edition provides a practical guide for those interested in the professional application of neuropsychological approaches and techniques in clinical practice. *Neural Control of Space Coding and Action Production*

C. Prablanc, D. Pélisson, Y. Rosetti, 2003-02-28 Clinical neuropsychology has evolved by integrating in its field the knowledge derived from neuroanatomical, electrophysiological and psychophysical data and has led to the development of rehabilitation tools. This volume tries to link the new concepts and discoveries in the field of sensorimotor coordination. It contains the main contributions of participants of an international symposium held in Lyon in 2001 entitled Neural control of space coding and action production. The book emphasizes the reciprocal relationship between perception and action and the essential role of active sensorimotor organization or reorganization in building up perceptual and motor representations of the self and of the external world. **The cognitive and neural bases of human tool use** François Osiurak, Cristina Massen, 2015-02-12

Humans are not unique in using tools. But human tool use differs from that known to occur in nonhumans in being very frequent, spontaneous and diversified. So a fundamental issue is what are the cognitive and neural bases of human tool use. This Research Topic of Frontiers provides a venue for leading researchers in the field of tool use to present original research papers, integrative reviews or theoretical articles that further our understanding of this topic. Articles address a wide range of

issues including for instance the nature of the underlying representations e g conceptual sensorimotor the mechanisms supporting the incorporation of tools into body schema the link between imitation and tool use or the evolutionary origins of human tool use Articles are included from experimental psychology neuropsychology neuroimaging neurophysiology developmental psychology ethology comparative psychology and ergonomics The goal of this Research Topic of Frontiers is to provide a state of the art view of the field

Neurological Foundations of Cognitive Neuroscience Mark D'Esposito, 2003 Despite dramatic advances in neuroimaging techniques patient based analyses of brain disorders continue to offer important insights into the functioning of the normal brain Bridging the gap between the work of neurologists studying clinical disorders and neuroscientists studying the neural mechanisms underlying normal cognition this book reviews classical neurobehavioral syndromes from both neurological and cognitive scientific perspectives Midwest
