An Essay on the Principle of Population. Thomas Malthus, 2018-02-23 Thomas Robert Malthus 13 February 1766 23 December 1834 was an English cleric and scholar influential in the fields of political economy and demography 2 Malthus himself used only his middle name Robert In his 1798 book *An Essay on the Principle of Population* Malthus observed that an increase in a nation's food production improved the well being of the populace but the improvement was temporary because it led to population growth which in turn restored the original per capita production level In other words mankind had a propensity to utilize abundance for population growth rather than for maintaining a high standard of living a view that has become known as the Malthusian trap or the Malthusian spectre Populations had a tendency to grow until the lower class suffered hardship and want and greater susceptibility to famine and disease a view that is sometimes referred to as a Malthusian catastrophe Malthus wrote in opposition to the popular view in 18th century Europe that saw society as improving and in principle as perfectible 4 He saw population growth as being inevitable whenever conditions improved thereby precluding real progress towards a utopian society The power of population is indefinitely greater than the power in the earth to produce subsistence for man 5 As an Anglican cleric Malthus saw this situation as divinely imposed to teach virtuous behaviour

An Essay on the Principle of Population Thomas Robert Malthus, George Thomas Bettany, 1890 **An Essay on the Principle of Population** Thomas Malthus, 2016-09-03 An essay on the principle of population as it affects the future improvement of society with remarks on the speculations of Mr Godwin M Condorcet

and other writers Thomas Malthus The book An Essay on the Principle of Population was first published anonymously in 1798 but the author was soon identified as Thomas Robert Malthus The book predicted a grim future as population would increase geometrically doubling every 25 years but food production would only grow arithmetically rising as 1 2 3 4 etc which would result in famine and starvation unless births were controlled The book overlooked potential improvements in farming such as steam powered machines chemical fertilizers drip irrigation night lighting or genetically modified organisms GMO The following Essay owes its origin to a conversation with a friend on the subject of Mr Godwin s essay on avarice and profusion in his Enquirer The discussion started the general question of the future improvement of society and the Author at first sat down with an intention of merely stating his thoughts to his friend upon paper in a clearer manner than he thought he could do in conversation But as the subject opened upon him some ideas occurred which he did not recollect to have met with before and as he conceived that every least light on a topic so generally interesting might be received with candour he determined to put his thoughts in a form for publication The Essay might undoubtedly have been rendered much more complete by a collection of a greater number of facts in elucidation of the general argument But a long and almost total interruption from very particular business joined to a desire perhaps imprudent of not delaying the publication much beyond the time that he originally proposed prevented the Author from giving to the subject an undivided attention He presumes however that the facts which he has adduced will be found to form no inconsiderable evidence for the truth of his opinion respecting the future improvement of mankind As the Author contemplates this opinion at present little more appears to him to be necessary than a plain statement in addition to the most cursory view of society to establish it
