Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals

National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-08-14 To safeguard public health the US Environmental Protection Agency EPA must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision making For decades the agency has dealt with questions about what animal testing data to use to make predictions about human health hazards how to perform dose response extrapolations how to identify and protect susceptible subpopulations and how to address uncertainties As alternatives to traditional toxicity testing have emerged the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods Endocrine active chemicals EACs have raised concerns that traditional toxicity testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function and small alterations in hormone concentrations particularly during sensitive life stages can have lasting and significant effects To address concerns about potential human health effects from EACs at low doses this report develops a strategy to evaluate the evidence for such low dose effects
