as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth  
century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated  
circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM  
we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way  
was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen  
for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s
