

Chemistry Chapter 8

Bonding and Molecular Structure

Key idea: Arrangement of nuclei and electrons of the bonded atoms results in a lower energy than for the separate atoms

- **Coulomb's Law:**
 - Coulomb's law says that the attractive force between ions of opposite charge is directly proportional to the product of the ion charges and inversely proportional to the square of the distance between them
 - $F = (q_A \times q_B) / r^2$
 - q_A and q_B = ion charges
 - R = distance between ions.
 - Negative number = attractive force, so disregard negative sign and biggest number = bigger magnitude.
- **Lewis Structures:**
 - **Key to bonding:** electron sharing to achieve a full valence shell
 - **Octet rule:** electrons are distributed in such a way that each element is surrounded by 8 electrons, an octet
 - Exceptions:
 - For H_2 molecule stability is reached with 2 electrons.
 - For expanded octets/valence: elements have more than 8 electrons (often 10 or 12) in a Lewis structure.
 - 3rd row and below can do this.
 - Incomplete Octet: elements have less than 8 electrons in a Lewis structure.
 - Molecules containing H, B and Be.
 - Non-bonding valence electrons (usually in pairs) are called lone pairs
 - Each dot represents a valence electron
 - The element symbol represents the nucleus and core electrons.
 - Hydrogen can only make one bond.
 - For Oxygen containing acids, the Hydrogen of the acid is attached to the Oxygen.
 - For organic molecules:
 - **Carbon forms 4 bonds** (a double bond is 2 bonds) and is generally in the interior of the molecule.
 - **Hydrogen forms only 1 bond** and is therefore a terminal atom (on the outside of the molecule).
 - **Oxygen usually forms 2 bonds.**
 - **Nitrogen usually forms 3 bonds** (may form 4 in a cation like NH_4^+).
- **Electronegativity (χ)**
 - The ability of an atom in a molecule to attract (pull) electrons to itself. The less electronegativity, the more bonds it forms and will be the central atom in a complex molecule.
- **Formal Charge (FC)**

Core Teaching Resources Chemistry Chapter 8:

Fundamentals of the Optics of Materials Vladimir I. Gavrilenko, Volodymyr S. Ovechko, 2023-10-19 This textbook showcases the rapidly developing field of materials optics. It is aimed at a broad audience as the readers require only university entry level knowledge of physics chemistry and optics. It overviews the basics of optical engineering and the typical and widely used applications of materials optics with the first general chapters corresponding to the standard university courses targeting bachelor's and master's degrees in physics. The next few chapters present the modern developments in materials optics such as nano plasmonics, nano photonics and optical properties of nano sized materials intended for readers familiar with the basic elements of quantum mechanics. Some more specialized chapters address recent developments in fields such as optics of solid surfaces, plasma optics, optics of composites, alloys and metamaterials, optics of anisotropic materials, optics of organic and biological materials and relativistic effects in optics. The appendices present a more advanced description of selected topics with important reference materials, subject index and extended list of publications as well as numerous examples and problems to better orient readers interested in gaining further knowledge of the subject.

Resources in Education, 1998 *Resources for Teaching Middle School Science* Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30 With age appropriate inquiry centered curriculum materials and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science developed by the National Science Resources Center (NSRC) is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands on inquiry centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved, and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and

multimedia programs chapters on books about science and teaching directories and guides to science trade books and periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents *Basic Concepts of Chemistry* Leo J.
