The Science and practice of medicine v. 2 William Aitken, 1864 *Referential Practice* William F. Hanks, 1990-11-29 Referential Practice is an anthropological study of language use in a contemporary Maya community It examines the routine conversational practices in which Maya speakers make reference to themselves and to each other to their immediate contexts and to their world Drawing on extensive fieldwork in Oxkutzcab Yucatán William F Hanks develops a sociocultural approach to reference in natural languages The core of this approach lies in treating speech as a social engagement and reference as a practice through which actors orient themselves in the world The conceptual framework derives from cultural anthropology linguistic pragmatics interpretive sociology and cognitive semantics As his central case Hanks undertakes a comprehensive analysis of deixis linguistic forms that fix reference in context such as English I you this that here and there He shows that Maya deixis is a basic cultural construct linking language with body space domestic space agricultural and ritual practices and other fields of social activity Using this as a guide to ethnographic description he discovers striking regularities in person reference and modes of participation the role of perception in reference and varieties of spatial orientation including locative deixis Traditionally considered a marginal area in linguistics and virtually untouched in the ethnographic literature the study of referential deixis becomes in Hanks's treatment an innovative and revealing methodology Referential Practice is the first full length study of actual deictic use in a non Western language the first in depth study of speech practice in Yucatec Maya culture and the first detailed account of the relation between routine conversation embodiment and ritual discourse

reports on how the problem of representation of images has been approached in scientific practice highlighting the role of mathematical methods and the philosophical background relevant for issues such as representation categorization and reasoning Without delving too much into the technical details the book examines and defends different kinds of values of fuzziness based on a complex approach to categorization as a practice adopting conceptual and empirical suggestions from different fields including the arts It subsequently advances criticisms and provides suggestions for interpretation and application By describing a cognitive framework based on fuzzy rough and near sets and discussing all of the relevant mathematical and philosophical theories for the representation and processing of vagueness in images the book offers a practice oriented guide to fuzzy visual reasoning along with novel insights into the field of interpreting and thinking with fuzzy pictures and fuzzy data

The Enlightenment of Sympathy Michael L. Frazer, 2010-08-18 The Enlightenment of Sympathy reclaims the sentimentalist theory of reflective autonomy as a resource for enriching social science normative theory and political practice today The sentimentalist description of the reflective process is more empirically accurate than the competing rationalist description and can guide scientists investigating the processes by which the mind formulates moral and political principles Yet the theory is much more than merely descriptive and can also contribute to the philosophical project of finding principles including principles of justice that wield genuine normative authority Enlightenment sentimentalism demonstrates that emotion is necessarily central to our civic life and shows how our reflective sentiments can counterbalance the unreflective feelings that might otherwise lead our political principles astray A
